E. K. STAHMER 1915

You Can Win with Sheppard's Famous Anconas

**They have the remarkable egg
record of 256 average for a flock**

In the laying house they will **win for you** because for years they have been line bred to lay. They just naturally have to "shell out the eggs"—its in their blood.

The large white eggs they lay will win for you—because their uniform size and color command the highest prices.

In the breeding yard they will win for you—because **they will reproduce**; years of careful mating, selecting and breeding assures this. Their characteristics are bred right into them, the demand for hatching eggs and breeding stock always exceeds the supply—advertisers of Sheppard's Famous Anconas always win.

In the show room they will win for you—because for **nine consecutive years** they have won three times as many first and second prizes at the **nation's greatest shows** as all competitors combined. **THEY ARE WORLD LEADERS.**

Give Them the Ha-Ha!

Man in Pennsylvania, who bought of me in 1914, writes: "They shell out the eggs—and don't take a day off, but keep on laying. They started on time at four and a half months. Skinned all other breeds in the neighborhood. My friends gave me the ha-ha last summer about the fancy breed of chickens, now I give them the ha-ha every time I see them. The **Anconas** have it on all of them—and they know it."—T. S. B.

You want profits; you want beauty and utility combined to the highest degree possible; you want to win, then, the answer is **Sheppard's Famous Anconas!**

**HIP!
HIP!!
HOORAY!!!**

**Grand
Champion
of the
World**

That is the proud title which the Aristocrats are now entitled to bear. Where the entire world gathered together its best birds, there, there the Aristocrats were crowned **Victors** over all. There, there where the best birds of the East, as well as of the West, where the best birds of the North, as well as of the South, where, in fact, the best birds that could be found **Anywhere at Any Price** were brought together in one mighty show-room—there, there the Aristocrats triumphed decisively, not only by winning a number of prizes, but by winning that hardest fought-for prize of all, that premier prize of the entire show,—

FIRST EXHIBITION COCKEREL

There, there in that magnificent gathering of the **World's Best** they won not only one prize, but a goodly string of prizes, not only on exhibition cockerels, but even more so on **Exhibition Pullets**. There, there is the stamp of approval, put there in one of the greatest, if not the greatest Poultry Show the World has ever seen. This was the entire World's Poultry Show, not an Eastern show, not a Western show, not a State show, not a National show—but the Poultry Show of the entire World. Therefore, once more

HOORAY! HOORAY!! ARISTOCRATS!!!

The sire of the World's Champion Cockerel is the great Ringy Wonder, who has proven to be a phenomenal breeder of exhibition cockerels. The bird is so intensely vigorous that he has stamped his truly sensational color and barring on his sons, so that I have a number of his cockerels which show even such wonderful barring as he has. Do **You** want one? They will be the **Winners** in the show-room, and the greatest breeders you can possibly buy. Write quick if you want one of these birds, the greatest among the great.

I have hundreds of grand exhibition cockerels. I have hundreds of grand exhibition pullets. I have hundreds of cocke... bred pullets and pullet-bred cockerels. All are ready and eagerly waiting to win out in January shows. Fellow Breeders, these Aristocrats this year are simply a revelation. Not only in that sharp dazzling, scintillating **Color and Barring** for which the Aristocrats are noted all over the world, but also in fine **Finish**, proud, vigorous **Carriage**, ideal **Plymouth Rock Type** and **Shape**, in almost perfect **Head Points**, and in deep, orange colored **Legs**, they are looking for their equals. I am proud of these birds—proud and happy.

If you wish to **Win** at **Any** show with any kind of Barred Rock—write me—for I can surely furnish such winners. You may order old birds or young, male or female, cockerel-bred or pullet-bred, singles or pens. If you want to be **sure** of winning, you simply **Must** have Aristocrats.

Order Early and be on the Safe Side.

Columbian Plymouth Rocks

Eggs and stock from pens headed by winners at Madison Square Garden and Palace and sons of "Columbia Queen," champion heavy weight hen, record 286 eggs. Mating list free.

T. J. ENSLIN Hackettstown, N. J.

"By Their Works Ye Shall Know Them"

At Panama-Pacific Exposition, San Francisco, Cal., on 3 entries S. C. Rhode Island Reds, 4th hen, 6th cockerel; 2 entries S. C. Buff Orpington, 5th pullet. Remember when you get ready to buy eggs or fowls, we were the only ones south of Ohio River and east of Mississippi River who breed

WE WANT
YOUR BUSINESS

S. C. Rhode Island Reds and Buff Orpingtons, to win a ribbon, and so far as we know the only ones who exhibited. Now if the other fellow has just as good or better why didn't he show his faith by his works and exhibit? Don't be misled by a plausible advertisement. When a fellow has something good enough to show he generally puts it on parade, if you have a good trotter you enter him in the races, just telling your neighbor you have a good one doesn't amount to anything, all of us say or claim that, but when you race him and he wins then your opinion is verified and it has weight.

At Palace Show, New York, November, 1915, on one entry White Runner Ducks, we won 1st young drake and 1st young duck.

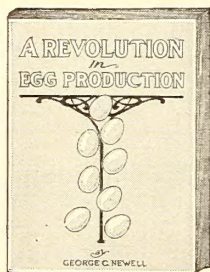

At Kentucky State Fair, Louisville, Ky., all classes full, we won every first but one, that on hen and were 4th; we won 1, 2, 3, 4, 5th cockerels. How often do you see that? Sweepstakes Cup with S. C. Orpington best male in show. Special with S. C. Rhode Island Red cock, best cock in show. Our winnings are too numerous this year to put in an advertisement. Send 30 cents in stamps for our new Colortype catalog—pheasants, fancy ducks, S. C. Rhode Island Reds, Buff and Blue Orpingtons, Houdans, White Runner ducks, White African guineas, Blue and White peafowls, wild turkeys, Japanese Silkies and Longtails. We have to charge for catalogs to protect ourselves against catalog fiends. But if you don't like our catalog and return in 48 hours after receiving, your money refunded. If you buy as much as \$5.00 when you remit, deduct cost of catalog.

CHILES & CO., Mt. Sterling, Ky.

Are You Breeding for Egg Production?

If you are you need a copy of

A Revolution in Egg Production

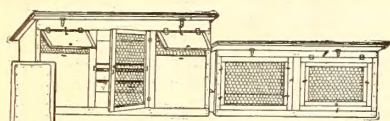

The first edition of this new work on egg production is now on the press. It is from the pen of Geo. G. Newell, being the author's experience of tested, successful methods for continuous laying, as practiced in his farm plant.

The author proves that environment is as big a factor in egg production as heredity, and there is no question but that if one follows his teachings they are sure to find the egg yield increase.

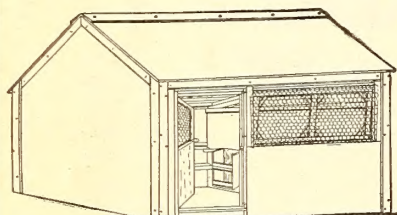

It treats on poultry care in general, appliances, brooding problems, artificial and natural incubation, winter, summer, fall and spring eggs, care of eggs, meat production, what to feed, water problems, in fact, it covers the poultry yard thoroughly in all its branches. All in all it is a book that we heartily recommend, for we are sure you will find it the best investment you ever made.

Order your copy today, it will be mailed to you as soon as off the press. The price is \$1.00.

AMERICAN POULTRY JOURNAL PUBLISHING COMPANY,

The Talk of the Chicago Coliseum Show

The Schwalge System of Artificial Incubation

At the recent Chicago Coliseum show, we firmly believe that we sold more incubators than any two of our competitors, and the reason is very simple. People who attended the show have been contemplating buying an incubator for some time; they had studied the catalogs of all the different manufacturers and needed but to see our machine in actual operation to finally convince them that the "Schwalge System" was the one they should have.

WITH OUR SYSTEM OF ARTIFICIAL INCUBATION

You buy a 150, 300 or 600-egg capacity machine and then add to this as your business increases until you have a MAMMOTH MACHINE.

There are no "hot spots" nor any "cold spots" in this machine—every square inch is of the same temperature. This is secured by a 5-Pipe Heating System—different from that used in any other incubator. Does not require so hot or intense a flame as other machines as more heat is made use of. Uniform heat means uniform hatches.

Moisture and Ventilation—In this incubator we have devised the most satisfactory moisture and ventilating system ever put into an incubator. We alone use it. Two pipes extend downward toward the floor. Moisture laden air is always near the floor; it is drawn up into the incubator thru the pipes and heated, thus supplying moisture and fresh warm air to the hatching chamber.

Regulating Devices—Because we heat ten sections with one lamp at the side of one section some people imagine there will be a difference in the temperature of the various sections. This is not so. By a series of graduated rings we permit a certain amount of heat to pass thru each section and so the heat is uniform.

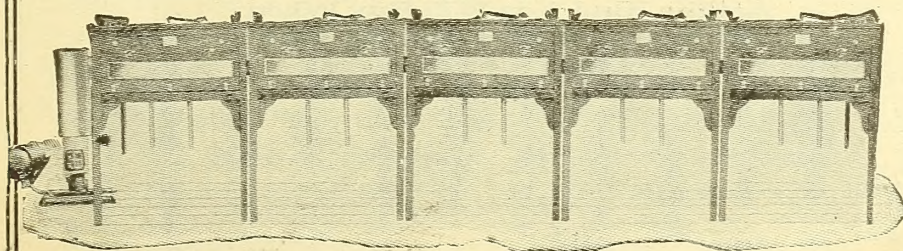

There are dozens of other exclusive features; so before buying an incubator send for catalog.

OUR FOUR-IN-ONE

consists of one section containing four independent egg chambers of 150 eggs each. It is a marvel in practicability and effectiveness, suitable for the most progressive poultry breeder.

Our guarantee is proof of what our machines are, for we agree to refund your money if you return the machine as not satisfactory any time within 40 days of date of sale.

THE MACHINE YOU WILL EVENTUALLY BUY

This illustration shows five sections of 150-egg size Schwalge Incubator joined together, making an incubator of 750 eggs capacity; all five sections are heated by one lamp and the temperature in all sections is exactly the same.

You want the best incubator your money will buy—the one that hatches every hatchable egg. Well, here it is. Just drop us a card for the "Schwalge System" catalog. Read the proof contained therein, then you will agree that better hatches for less money means the

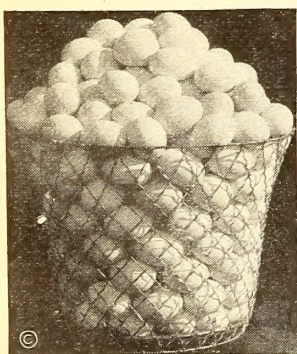

TIME-TRIED,
TESTED, TRUE,
SCHWALGE SYSTEM

Big Winners Again

CAMPINES

At the World's Largest Show, the Panama-Pacific International Expo., San Francisco, Cal.
WE WON NINE FIRSTS OUT OF A POSSIBLE EIGHTEEN and eighteen minor ribbons, not including Club, Champion and Grand Champion Ribbons. Everyone of our forty-four birds competing in this show won a ribbon. This is a very remarkable record, considering the fact that our birds traveled three thousand miles and were placed in competition with local or acclimated birds. Our birds have been consistent winners for the last four years.

At the 1914 Coliseum Chicago Show, we won on Sussex 20 ribbons, 14 firsts, 4 Club ribbons.

1915 at Cleveland, The State A. P. A. Show and Ohio State Fair, 25 ribbons, 18 firsts.

At the Pan-American, San Francisco, 7 firsts, 5 seconds, 3 thirds, 1 fourth, 2 fifths, and 5 Club ribbons, also Champion and Grand Champion ribbons.

In addition to the above winnings, we have furnished birds for a number of the largest shows of the United States. We have a choice lot of birds from the same matings as our Pan American winners for sale at most reasonable prices. We have our 1916 pens mated for the egg trade; these pens are composed of our choice birds, including the above named prize winners, and will undoubtedly produce a preponderance of winners. Write us for prices on both eggs and stock.

GENSEMER BROS.

161 Main Street

CRESTON, OHIO

Our Campines in 1913 won at Chicago Coliseum and Cleveland 21 ribbons, 9 firsts, 9 Club specials. 1914, same shows, 20 ribbons, 12 firsts, 8 Club specials. 1915, Cleveland and Ohio State Fair, 15 ribbons, 10 Blues and 6 Club ribbons and best display in both colors.

At the Pan-American, San Francisco, 2 firsts, 2 seconds, 1 third, 2 fourths, 1 sixth and 1 seventh.

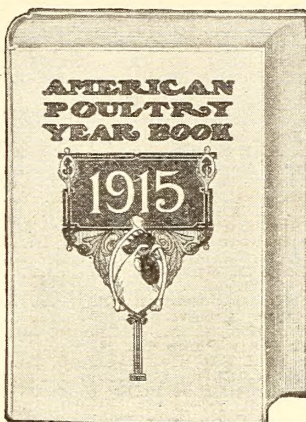

Poultry Books at a Cut Price

A complete list of poultry books that everybody interested in poultry should have. This list is made up to supply the wants of all poultrymen, and covers about every phase of the industry; in fact, it makes almost a complete poultry library, and by taking them all at a cut price, you will be well equipped to make a success of this business. The books tell you how to line-breed, feed for egg production, reduce your feed bill, mate to produce exhibition birds, prevent and cure diseases, mix a balanced ration, build poultry houses, poultry appliances, etc. Following illustrations show books.

Save 33 $\frac{1}{3}$ %

by ordering six or more now.

84 pages. Cloth binding. Contains diagrams of houses of all descriptions. Price 75c.

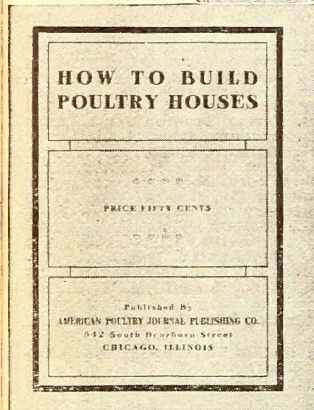

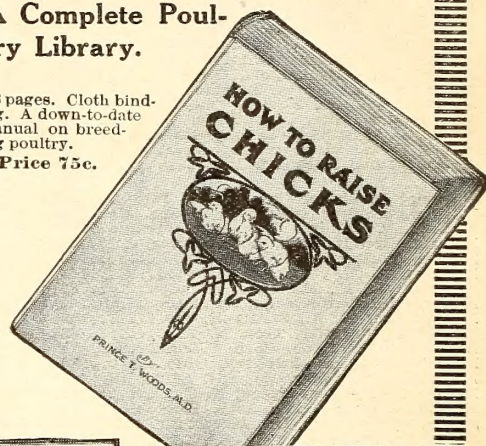

448 pages. Complete show reports and the best articles that money could buy, on the most helpful subjects.

Paper 50; Cloth \$1.00.

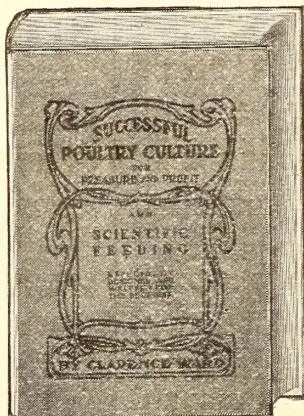

11 Books \$5

A Complete Poultry Library.

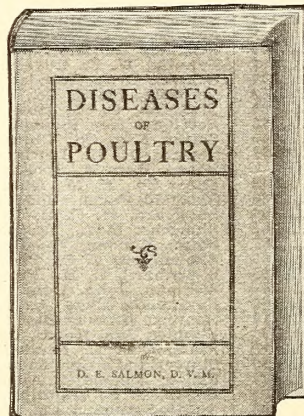

128 pages. Cloth binding. A down-to-date manual on breeding poultry. Price 75c.

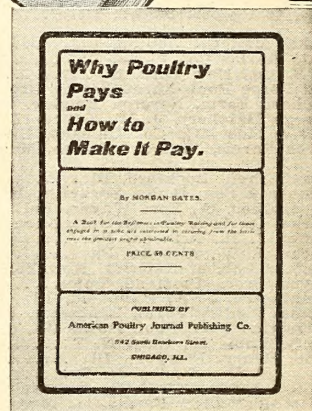

Plans for houses and equipment. Everything necessary in building line. Price 50c.

128 pages, 30 illustrations. Tells how to save three-fourths your feed bill. Price 50c.

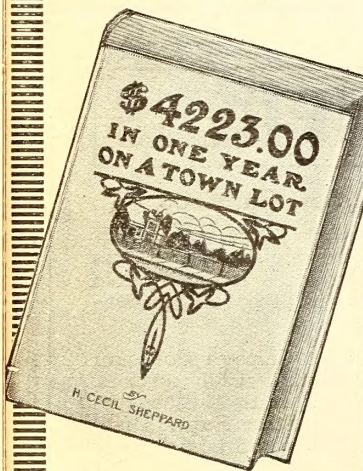

252 pages, 72 illustrations. Be your own poultry doctor. An invaluable reference book. Price 50c.

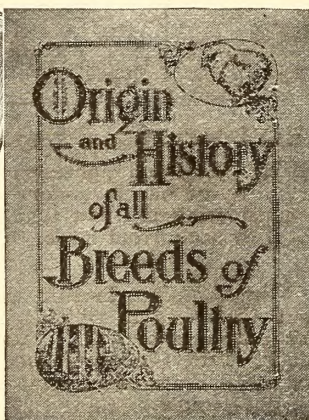

A text book for the beginner. Contains charts on line breeding. Price 50c.

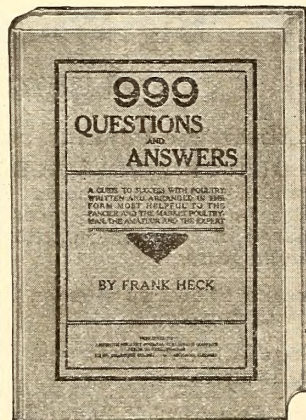

Eleven Books for \$5.00

84 pages. Cloth binding. Written from actual experience by Mr. Sheppard. Price \$1.00.

64 pages. Colored illustrations of 198 birds. Tells how to mate for best results. Price \$1.00.

124 pages. Cloth binding. No matter what question arises, this book gives you the answer. Price 75c.

75 pages. Handsomely illustrated. A practical poultry story. Cloth binding. Price 75c.

Cut Price for the Eleven, \$5.00; about 45c each.

This is a saving to you of one-third the regular price. If you have one or more of the above books, you can get the balance at one-third off the regular prices by ordering six or more at one time. No order for less than six accepted at reduced price. Take advantage of this liberal offer today. If not satisfied with your bargain, return the books and we will return your money.

Box 30

MENOMINEE, MICHIGAN

Rudy's Perfection White Wyandottes

THE KIND THAT PLEASE

Come to me for pure white, broad backed Wyandottes with well spread tails and perfect head points, so much desired in this beautiful variety. I will treat you right. I can supply you with prize winners or utility birds at prices to meet your pocket-book. Don't think that my prices are beyond your means just because I have the reputation of being one of the most successful breeders of Wyandottes. My prices are reasonable, both for stock and eggs—just send for catalog—and be convinced.

I make a specialty of furnishing breeding pens for utility purposes—mated correctly—the kind that will lay the foundation for a flock of beauty—I term such matings

MY \$35.00 BREEDING PENS

I will furnish other matings and single birds at equally moderate prices. All orders receive my personal attention and all birds are carefully looked over by me before being shipped. My birds are all Farm Raised—they have free range and are milk feed, producing bone, size and vigor.

Come to the Chicago Show, January 13 to 19

I will be there with a string of 50 or more PERFECTION WYANDOTTES—look them over—buy if you like—every bird will be for sale, and I know that my prices will suit you. If you cannot attend the show and see me personally, write for my illustrated catalog—my silent salesman.

Egg Orders Booked Now for Early Spring Delivery

GEO. H. RUDY

Route 15

MATTOON, ILLINOIS

Queen - Built to Hatch Without Trouble

The Queen is built for results—under any and all conditions. We make the assertion that it will produce, year in and year out, **better hatches of stronger chicks**, with less attention, than any other machine on the market—at any price.

Most any machine will hatch under ideal conditions, but if you are in the poultry business, you can't always have ideal conditions, and you must be protected against the unexpected, such as a sudden drop in temperature. The Queen regulator will take care of a sudden change of seventy degrees.

Strong, Sturdy Chicks

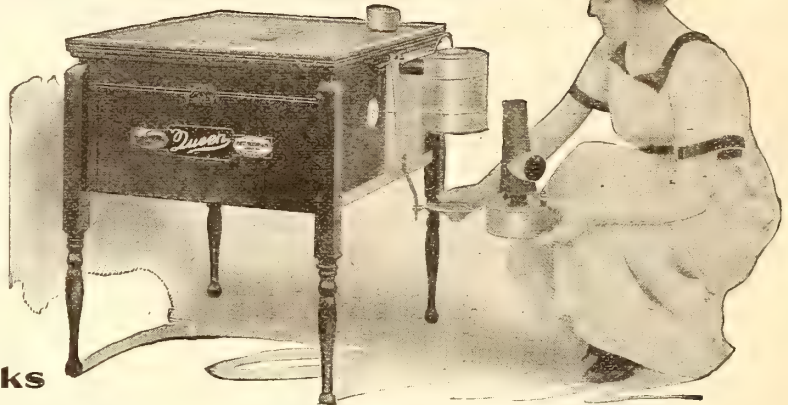

F. P. Smith & Co., Indianapolis, Ind., who sell Queen Incubators in that city, tell us that they have never known a machine that hatched such strong, virile chicks as the Queen, and that many of their customers comment on this. Last season they **hatched 2500 chicks** from Queen machines, selling \$500 worth of them, and no complaints of chicks dying. The Queen seems to start them off with great vitality—providing the best possible surroundings and conditions of moisture and heat for the chick to make the most of its start in life.

Leads Them All in Wisconsin

C. D. Adams, Mgr. Poultry Show, Milwaukee Co. Experiment Assn., Wauwatosa, Wis., wrote Oct. 21, 1915:

"For three years we have been using a Queen Incubator and Brooder in our work here in competition with eight other makes. The older students often put the newer ones 'wise' as to the incubator to use in their work, and it is not uncommon for students to ask for the Queen. I frequently put my special matings in it, and I believe it has given a **larger percentage of strong chicks** than any other machine we have, and some cost almost double what it did."

It's so easy to take care of a Queen. Nothing to do but fill the lamp and turn the eggs.

Hot Water or Hot Air

Some hot air machines are provided with elaborate adjustments, to provide moisture—all right if they work. It is now generally admitted, however, that hot water machines are the safest. The Queen is a hot water machine.

Mrs. C. C. Blake, Pocatello, Idaho, just starting in the poultry business, writes: "An old poultryman told me I had made a wise choice when I selected the Queen. He has 14 different makes at his large poultry plant, both hot water and hot air. He finds hot water machines for superior to hot air, and the **best hot water machine is the Queen.**"

18 PER CENT BETTER THAN EASTERN MACHINES
11 PER CENT BETTER THAN WESTERN MACHINES

John Bowen, of the Colorado Poultry Fanciers Association, wrote September 24, 1915: "Last season the writer installed a Queen as an experiment, and found that it hatched 18 per cent better than Eastern made machines and 11 per cent better than any machine in the West. All the machines were run under exactly the same conditions."

Self-Supporting Egg Trays

It is costly to have a tray of eggs slip out and drop to the floor. Most of the cheap machines have no protection. Can't happen with a Queen, as it has **Self-Supporting Egg Trays.**

Before You Buy ANY Incubator Check Up Specifications With the Queen

Some machines are made of galvanized iron, or tin, or cardboard, or other cheap material that gets hot or cold quickly, absorbs odors, moisture, etc., and is liable to kill or weaken the chicks after the first few hatches.

The Queen is made of California Redwood, the best material ever discovered for incubators. Of course it costs more.

Some machines have only one real wall and consequently are not properly insulated.

The Queen has double Redwood wall—1 inch outer and half inch inner—the space between being filled with corrugated strawboard, making perfect insulation.

Some machines regulate only when temperature is uniform and everything runs right.

The Queen Regulator is a wonder. It will take care of a heat variation of seventy degrees.

What Leading Poultry Papers Say

American Poultry Journal, Chicago, writes: "During the many years you have been advertising Queen incubators in the columns of American Poultry Journal, we have not, to the best of our recollection, received a single complaint from your customers."

Reliable Poultry Journal, Quincy, Ill., writes: "We do not now call to mind having received any complaints against your machine or the manner in which your company handles its orders."

Western Poultry Journal, Cedar Rapids, Ia., writes: "In all these years that the Queen Incubator has been advertised in Western Poultry Journal, we have as yet to receive the first expression of dissatisfaction from any of our subscribers. We think this is a splendid recommendation not only for promptness and business ability but for the quality of the Queen Incubator."

Not a Cheap Machine

The Queen is not a cheap incubator, compared with many of the cheaply constructed machines on the market, but it is cheap in the long run. It will be turning out high-percentage hatches years after the cheap machines have been junked. It will be a pleasure to send you our Catalog.

QUEEN INCUBATOR CO., 105 Bryan Ave., Lincoln, Neb.

EUREKA!

Two Sweepstakes Championships At the December COLISEUM SHOW, CHICAGO, ILL.

I TOLD YOU SO

But you may have taken my statement with a grain of a salt. Now, however, that I have won the lion's share of honors in the great contest between the quality breeders of the East, West, North and South

IN S. C. W. LEGHORNS

no fair-minded man will question the right of my stock to be considered the equal of the best, both in exhibition and egg-laying qualities.

JUST CONSIDER THAT IN S. C. WHITE LEGHORNS

I won First and Third in Cocks
I won First and Fourth in Cockerels
I won the Coliseum Silver Cup for Best Display

I won First Young Pen
I won Second and Third Old Pen

IN SILVER CAMPINES

The Very Cream of the Best Fowls of the Country Were Exhibited.

THE CAMPINE CLUB OF AMERICA

held its annual meet at the Coliseum, and the leading breeders of the East—the head-liners in Campinedom—were present with their exhibits. The classes were the very strongest, everyone agrees, that have ever been exhibited and

THE GREATEST HONORS WERE MINE

I won TWO of the five awards in Cockerels
I won THREE of the five awards in Hens
I won THREE of the five awards in Pullets
I won THREE of the five awards in Old Pens

I won THREE of the five awards in Young Pens
I won The Silver Campine Club Challenge Cup
I won The Coliseum Cup for Best Display
I had 48 Campines entered; 38 were placed

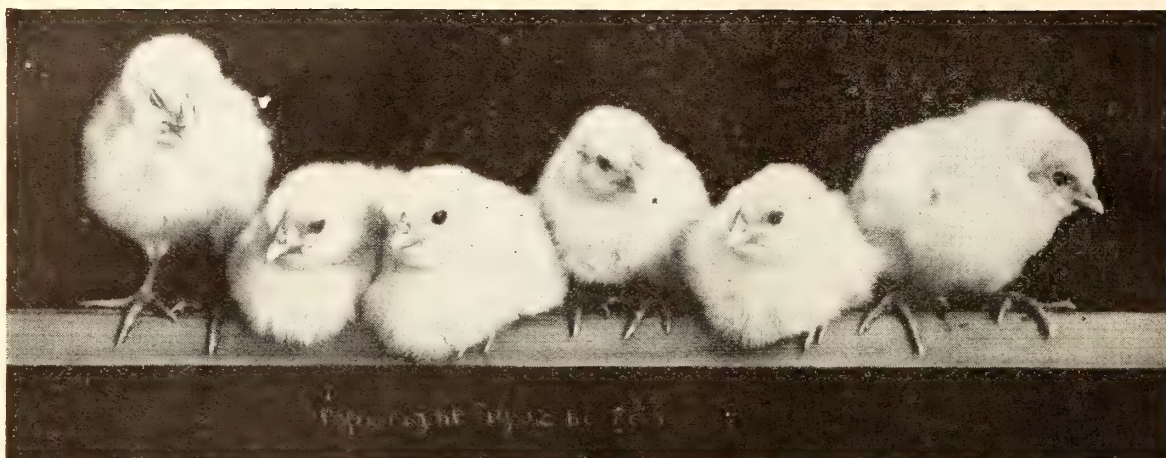

Exhibition Stock I can furnish Leghorns and Campines for any show in the Country at very reasonable prices, and my guarantee to satisfy backs up every sale.

Utility Stock I have several hundred each of Silver Campine and S. C. White Leghorn breeding stock, males and females, at astonishingly low prices. Why not get the best, when they will cost you no more than inferior specimens? And, remember, I guarantee each sale.

Hatching Eggs November 1st I had 10 pens of each breed mated. December 1st I had 250 vigorous baby chicks. By January 1st I shall have 20 pens of each breed mated. I am now selling eggs from my all-star matings at very, very reasonable prices and I guarantee safe delivery and high fertility. Write today for my January, 1916 Announcement concerning show stock, utility stock and hatching eggs.

Free Mating List on Request.

FRANK E. HERING, Desk B, So. Bend, Ind.

The Most Popular White Leghorn Plant
in America Today Is

THE EVERLAY FARM

(THE LORD FARMS)

METHUEN, MASS.

THIS business has been built up principally on good service to our customers. We have always had something good to sell at reasonable prices to the trade. We have never tried to catch a customer by unreliable advertising, and today we enjoy the confidence of hundreds and thousands of purchasers of day old chicks, hatching eggs, and breeding stock.

We have never advertised 200, 240 or 260 laying stock as being representative of our regular strain of utility breeders. We have scores of high record layers on our farms, but our layers and breeders have never yet all averaged 200 eggs for a season. We have never advertised any "get rich quick" schemes to sell our stock, and have always tried in our advertising to appeal to sensible, intelligent buyers. Our strain will average just about twice as many eggs as the average American hen, and it is the average from every bird that tells the story in profits at the end of the year.

Our Leghorns are all of one strain and are bred and kept under free range conditions on five farms. Our eggs are not gathered like some big hatcheries from all over the surrounding country. Every breeder is a selected bird that has been bred from a large white egg, and for generations have been bred from good producers.

Another good reason for the tremendous sale of our chicks has been the reasonable prices we have always made on the same.

200,000 S. C. W. Leghorn Baby Chicks for 1916

25 to 50 chicks.....17c	500 to 1000 chicks.....14½c
50 to 100 chicks.....16c	1000 to 2000 chicks.....14c
100 to 500 chicks.....15c	2000 to 5000 chicks.....13½c
	5000 or more chicks.....13c

We shall be ready with

5000 chicks a week in February
12000 chicks a week in April

10000 chicks a week in March
12000 chicks a week in May

EGGS FOR HATCHING. 90% guaranteed fertile at only \$8.00 per 100; cheaper in 1,000 lots. Special matings from high class record layers, the finest on our farms at only \$3.00 and \$5.00 for 15 eggs.

Remember we own the fourth winning pen at the Storrs International Egg Laying Contest for 1915; average egg productions, 196.2. These special matings are all headed with cocks or cockerels bred from hens with

records of over 250 eggs, and males from these pens should increase the laying qualities to a marked degree.

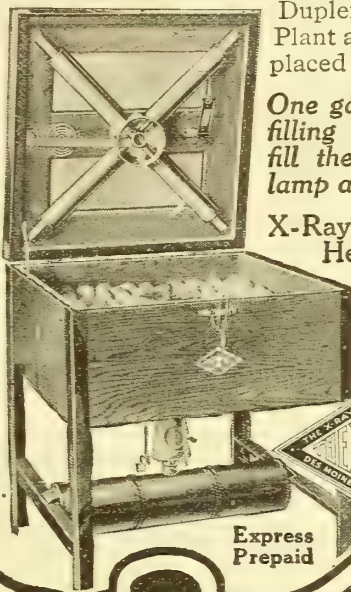

We issue a 96-page catalog which fully describes our plant, our breeding, feeding, and housing methods. It is a book that new beginners can safely follow to insure success in the poultry business, and is well worth \$1.00 for the information it contains. To obtain this book address as below:

THE EVERLAY FARM, Box 240-M, METHUEN, MASS.
(THE LORD FARMS)

103 Chicks From 106 Eggs

That's the experience of Wm. A. Foskey, Pittsville, Md. Unusual, you say? Not in the least—he owns an X-Ray.

Record hatches with an X-Ray | Poultry raisers! Note the X-Ray Incubator are the rule, not the exception; thousands of letters from X-Ray users everywhere prove that. The reason is plain—so plain and simple that it's a wonder it wasn't thought of years ago—it's the X-Ray Duplex Central Heating Plant that smashes hatching records year after year.

One gallon of oil—one filling for the hatch—fill the tank, light the lamp and forget.

X-Ray Duplex Central Heating Plant saves fuel—heats evenly and produces the biggest hatches

Express
Prepaid

The Secret of Biggest Hatches

You fill the big X-Ray Tank *just once* for a hatch. In fifteen minutes after lighting the lamp the temperature is right and kept *right* by the X-Ray Automatic Trip. This wonderful device adjusts the flame automatically—turns it up or down exactly as

needed to maintain a steady, even heat of exact hatching temperature. The X-Ray Duplex Heater distributes an even, moist heat to every part of the egg chamber—the true heat of the mother hen. Get our new FREE book—it illustrates and describes 15 special features of

X-RAY INCUBATORS AND BROODERS

It's the finest book we have ever published. Send for a copy—it's FREE. Complete in every detail, written in a common-sense way—full of wonderful illustrations. Tells all about X-Ray Incubators and Brooders. Send a postal for it tonight.

BOX "A" LANCASTER, PA.

Fact

Fact

French's Poultry Mustard

is used by many poultrymen whose birds are winning prizes at this season's leading shows. Read why. Utility men testify that it also has a distinct relation to increased egg production.

MR. A. E. Martz, President of the Coliseum Poultry Show, is but one of our many thousands of satisfied customers. Whether you breed and show fancy birds or want an increased egg production, you should know the value of adding one heaping teaspoonful of *French's Poultry Mustard* to the daily ration for every six birds. This small quantity is producing wonderful results for such well-known poultrymen as Haldie Nicholson, E. B. Thompson, C. F. Rankin, H. H. Coburn, E. S. Aldrich, H. Roberts Armstrong, H. P. Schwab, Geo. Urban, Jr. and hundreds of others.

Don't confuse *French's Poultry Mustard* with ordinary commercial Mustard, the use of which may be beneficial, but which is very expensive and not nearly so strong. *French's Poultry Mustard* is a pure Mustard Flour made from carefully selected, imported Mustard Seeds, especially prepared for use with poultry. It is many times stronger than other Mustard Flour, hence the small quantity to be used daily, and the satisfactory results as attested by our large and constantly increasing fraternity of users.

It is packed and sold by dealers in 1½-lb., 3-lb., 5-lb., 10-lb. and 25-lb. containers. These are sealed for your protection. Beware of substitutes and counterfeits. You cannot buy *French's Poultry Mustard* in bulk except in 50-lb. and 100-lb. drums and 200-lb. barrels thru your dealer, to be shipped direct from factory to you. The 10-lb. and 25-lb. containers sell at 20c per pound, f. o. b. dealer's point; the bulk quantities a little less, and the smaller packages a little more per pound. When fed continuously the cost

does not exceed 10 cents per hen per year—half that for just the winter months.

If your dealer can't supply you, send direct to us. Any quantity will be sent or your order referred to our nearest dealer when we can effect a saving for you on carrying charges by so doing. We have a 32-page booklet, "Mustard: Its Relation to Poultry and Increased Egg Production," which will be sent free for your dealer's name. Your birds need *French's Poultry Mustard* now.

The R. T. French Co.,
Rochester, N. Y.

September 6, 1915.

Gentlemen:

When I began the use of FRENCH'S POULTRY MUSTARD I had nothing in mind but its stimulating effect as a condiment, but I have wonderfully changed in regard to this after a prolonged use, as our flock of Fashion Plate Buff Orpingtons has taken on most wonderful vigor and our egg production increased to a very marked degree.

I add one pint of FRENCH'S POULTRY MUSTARD to my formula in building up a bushel of dry mash, and this quantity has proven to be the right proportion.

Our supply is running low and will, within a short time, send an additional order.

Sincerely yours,

(Signed) A. E. MARTZ.

SCHENLEY HEIGHTS POULTRY FARM

Pittsburgh, Pa., June 10, '15.

The R. T. French Co.,
Rochester, N. Y.

Gentlemen:

I most heartily endorse the regular use of *French's Poultry Mustard*. Am assured that it stimulates and adds vigor to the birds. My Single and Rose Comb Rhode Island Reds have never done better, never were better, and have never laid more eggs than this season. They have been kept in the best of health and have given the results we all wish for. The regular and liberal use of "French's Poultry Mustard" insures poultry success. I remain,

Yours very truly,

(Signed) C. F. RANKIN, Prop.

Amenia, N. Y., June 22, 1915.

R. T. French Co.,
Rochester, N. Y.

Gentlemen:

Allow me to express my high appreciation of *French's Poultry Mustard*. I have been pleased to recommend this Mustard since 1912, and I am now more convinced than ever that it is a healthful tonic, and that birds receiving it regularly are much better for its use. My Imperial "Ringlets" with their World's Records appreciate it; they were never better in shape, color and size than now.

Very truly yours,

(Signed) E. B. THOMPSON.

Columbus, Ohio, Station B, September 17, 1915.

Gentlemen:

French's Poultry Mustard has given us most satisfactory results and we advise its use at all times. There is no doubt but that it has benefited our entire line more than we can estimate. The health, vigor, bone and size of our White Orpingtons have been widely commended, all of which has placed them World's Champions at New York and other leading shows. We feel that *French's Poultry Mustard* is a necessity to poultry success.

Very truly and sincerely,

ALDRICH POULTRY FARM.

Marysville, Mich., Sept. 22, 1915.

The R. T. French Co., Rochester, New York.

Gentlemen:

I have every reason to highly recommend *French's Poultry Mustard*, for we feel it is a necessity to obtain the best results and to keep the fowls at their best all the time.

Our Red and Speckled Sussex are naturally a very vigorous and hardy, quick growing breed, still no harm can come from the constant use of your Mustard, but unquestionably all fowls derive much good from it. It is invaluable as a show conditioner, as it adds beautiful luster to the plumage and tones them up in the close confinement. Our Sussex stand today as evidence of its worth.

Very truly yours,

(Signed) H. H. COBURN.

Owner and Manager Red Sussex Farm.

BROODER AND CHICKS FREE

READ THIS GREAT OFFER

To introduce my improved System of keeping poultry I will give **SIX THOROUGHbred BABY CHICKS** and small **BROODER FREE** with order for **BOOKS** and **PLANS** that tell all about the wonderful discoveries in **POULTRY** and **FARM** work. You can have the benefit of my forty years' experience that has resulted in the greatest profits ever made on a poultry farm.

THE PHILO SYSTEM

is unlike all other ways of keeping poultry and in many ways is exactly the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard-of results that are hard to believe without seeing.

This new system covers all branches of the work necessary for success from selecting the breeders to marketing the products. It tells how to get eggs that will hatch, how to hatch nearly every egg, and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make things necessary to run the business and at less than half the cost required to handle the poultry business in any other manner.

One of the secrets is to save the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick and believed to be the secret of the ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

101 W. 3D ST., FREDERICK, MD.,
JULY 23, 1914.

E. W. PHILO,

DEAR SIR:—I have been following your system for four years and have been very successful. This past February I had a few chicks to hatch and one chick at six weeks old weighed two and one-half pounds. I felt very proud. Last fall at the Frederick County Fair, I carried first prize and first sweepstake prize for eggs. I consider your system the root of it all.

Yours truly,
MRS. HUGH DEAN.

Philo System Book, Postpaid, \$1.00.
Three Sets of Coop Plans from drawings showing the exact size and shape of every piece of wood, postpaid, \$1.00.

Brooder-Hatcher, complete, \$8.00

Philo System Book, 3 Sets Coop Plans, the New Book, "Farming," and a Brooder-Hatcher, complete, all for \$10.00.

If ordered direct from this advertisement I will give you a premium of Six Baby Chicks, a Brooder and Chick Feed FREE.

The "CYCLE" and "BROODER-HATCHERS" produce the LARGE, FLUFFY kind of chickens that come out of their shell with a determination to live and grow into PROFITABLE POULTRY. With these machines we find it so easy to hatch chicks that we can offer them for premiums by the thousands. The success of every poultry business is in the reproduction of the best poultry at the smallest cost. The CYCLE will help you as it is helping more than two hundred thousand poultry keepers in every section of the world. Read the following letters:

RAMONA, CAL., NOV. 6, 1915.

E. W. PHILO, ELMIRA, N. Y.

DEAR SIR:—As I am so well pleased with the ten incubators and twenty brooders ordered of you last April, I have decided to increase my plant. Enclosed you will find draft for which please send me twenty more Cycle Hatchers. Please rush. Yours truly, GEO. R. COMINGS.

FARMING WITH ALFALFA

The new farm book tells how to grow alfalfa successfully on nearly all kinds of land and why so many farmers have not been successful when trying to grow it. It gives advice about selecting a farm for a good investment, preparing the land, seeding, harvesting and marketing. How to convert alfalfa into cash, how to run a farm profitably without stock and at the same time keep up the fertility of the soil, or how to get the largest profits from stock raising, how to increase the milk production of a dairy without feeding grain, how to make poultry on the farm pay the largest profits, how to produce strong, fertile eggs, how to hatch and raise the chickens at the smallest cost for feed and labor, how to handle many things that often go to waste on the farm and turn them into profit, how to provide an abundance of everything good to eat for the table at a great saving in cost. Complete, easy-to-follow instructions will be furnished in book form, not a large, difficult book of theory, but a small one full of facts not generally known.

The alfalfa plant draws nitrogen from the air and fertilizer from the earth at a greater depth than can be reached by modern machinery and in greater quantities than the farmer can afford to buy, it puts new life into the soil and gathers by its own efforts the essential elements for growing plants to perfection. **Farming book, postpaid, \$1.00**

SELLERSVILLE, PA., JUNE 16, 1913.

E. W. PHILO, ELMIRA, N. Y.

DEAR SIR:—We are pleased to notify you that the Cycle Hatcher is the winner of our extensive Incubator contest, making the remarkable record of a 100 per cent hatch and the only machine in the contest that made a perfect record.

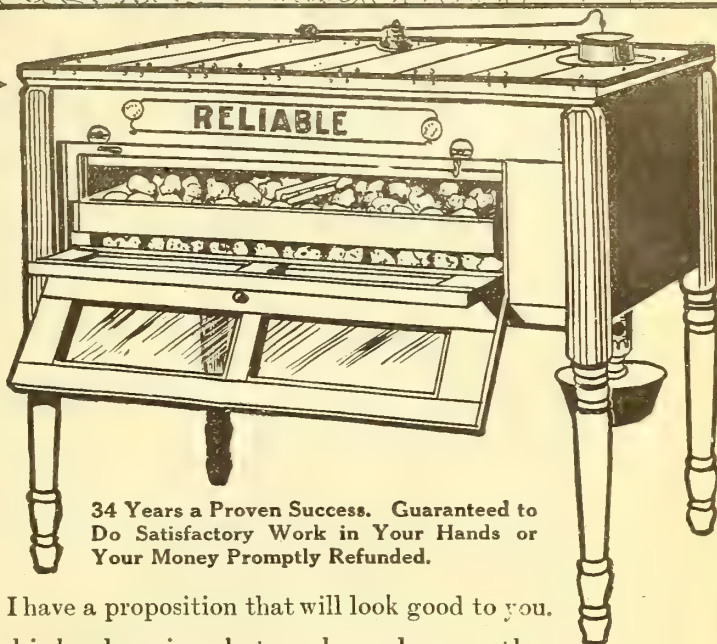

THE ITEM PUBLISHING COMPANY.

I will send you by return mail the PHILO SYSTEM BOOK, my new book, "FARMING," and three sets of COOP PLANS for \$3.00 and will give you absolutely free 6 THOROUGHbred BABY CHICKS and BROODER. Order direct from this advertisement and I will include free of charge a package of chick food to give the PREMIUM chicks a good start. Catalogue Free.

THE RELIABLE
INCUBATOR**

Get My Sensational 1916 Incubator Offer!

34 Years a Proven Success. Guaranteed to Do Satisfactory Work in Your Hands or Your Money Promptly Refunded.

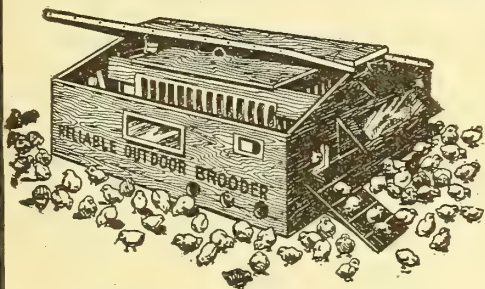

J. W. MYERS, Pres.
Reliable Incubator
& Brooder Co.

If you are in the poultry business with a cheaply built, unsatisfactory incubator, or if you are about to go into this profitable business with a small amount of money, I have a proposition that will look good to you.

The prices of really high class incubators have been rather high, and many people have bought cheaply built machines which proved to be unsatisfactory, with the result that they lost faith in all incubators.

Now, in this, the 34th year of my remarkable success with the **Old Reliable Incubator**, I am going to place one or more of my Old Reliabilities in every county in the United States, and at a low price.

I Want You to Let Me Give You My Startlingly Low Price on This World-Famous Machine

My Reliable Brooder will save you money on young chicks. They take care of the little chicks better than the hen, and are ready for work all the year round. They are built in all sizes, on scientific principles, for either outdoor or indoor use, hot-air or hot-water heated. You can't get along without a good brooder if you want the best results in the poultry business.

and let me tell you what sort of a hatching machine the Old Reliable is, before you risk your money on any other.

In this limited space I can give you only a few facts about the Old Reliable:

It has been on the market 34 years.

It is in use at many government experimental stations—U. S. Government, State Governments, and foreign governments.

It has **never been beaten at any competitive exhibition**—national,

international, state or county—holds **over 1200 First Prizes** awarded on superior merit.

It is the favorite incubator of the big professional poultry raisers, the successful incubator for amateurs—**nearly half a million now in constant use.**

The Reliable is the Only Incubator With a Double-Heating System

combining hot air and hot water. Copper hot water tank extends entire length of egg chamber, holding a large body of hot water over the eggs at all times—maintains the proper hatching temperature in any kind of weather.

The Reliable Incubator is built of the very best kiln-dried redwood, with double walls, top and bottom tongued and grooved. Has the most sensitive and accurate regulating system; moisture and ventilation perfect, and a Government Tested Standard Thermometer. Has double glass doors, roomy chick nursery—in fact, it is the recognized standard hatching machine of America, made in the world's biggest incubator factory.

Guaranteed to Hatch Every Hatchable Egg, Regardless of Climate, Altitude or Weather

and now sold at a price that makes it the biggest incubator bargain ever offered to the poultry world.

I want to call your attention also to my Reliable Bantling Incubators at sensationally low prices. They are world-beaters on quality and price.

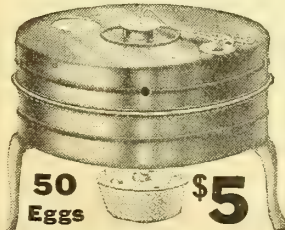

If you will let me give you full information about the Reliable, and get my prices before you buy a machine, I can save you trouble and money.

J. W. MYERS, Pres.
Reliable Incubator and Brooder Co.
Box A-1 Quincy, Illinois

Write for my 34th Annual **FREE Poultry Book** of 100 pages, with many illustrations. Gives much practical information on poultry raising based on 40 years experience.

The Baby Grand Incubator

is the sensation of the day in the incubator world. A 50-egg, all-steel machine, with double walls, scientific regulation; guaranteed successful in your hands or money refunded. Will hatch every hatchable egg in any climate or weather. Sent complete, ready to work, charges paid, and with full directions for operating. **Price only \$5**, cash, check or postal order. This incubator enables you to get into the poultry business at little cost and be sure of the best results. We refer you to any bank as to our responsibility.

Health"**

Tell You the Secret

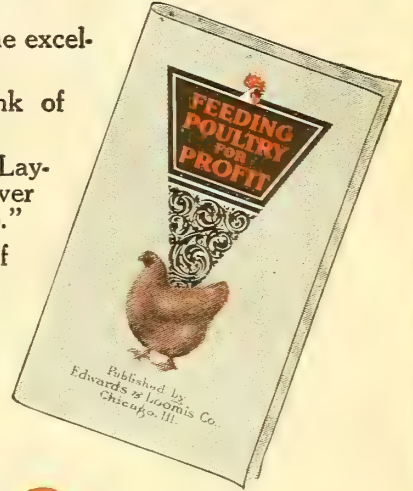

Mrs. J. H. Harnley: "The high honors accorded my birds proclaim loudly the excellent conditioning value of Red Comb Feed."

J. E. Young: "Red Comb makes the hens lay and keeps them in the pink of condition."

C. E. Reed: "My five White Plymouth Rock hens in the International Egg Laying Competition were the heaviest laying pen of White Plymouth Rocks ever recorded in competition. They were raised and conditioned on Red Comb."

Eugene C. Smith: "You noticed the fine condition and luxurious plumage of the first White Leghorn cock bird particularly. I would not be at all surprised if the high quality of Red Comb Poultry Feed and Meat Mash on which my prize birds were raised had something to do with this."

F. E. Harrison. "As the largest breeder of Single Comb Rhode Island Reds in the world I can truthfully say that 'Red Comb' is a peer as a conditioner and its quality is the best."

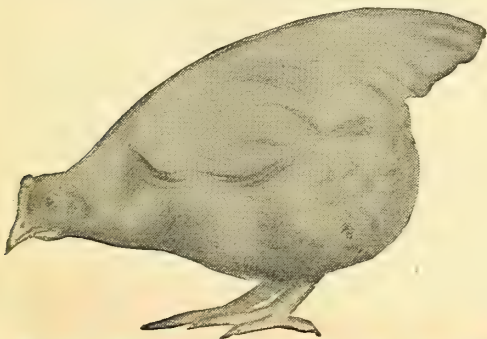

Comb

Red Comb is a scientifically balanced ration—ground from the finest whole grains—mixed by experts—backed by 45 years' experience. *Red Comb contains*

the minimum of grit. Percentage guaranteed on each bag. Made with no grit if preferred. Feed Red Comb and join the profit makers.

Why pay high prices when you can have my Belle City Incubator and Brooder, proved winners, *at my low prices?* (Same as last year.) Before you decide on any incubator and brooder write to me and see how much I can save you.

Send a letter or postal card to me today and my book, "Hatching Facts," with all information will come right back to you

Send Today for My Big FREE Book

"Hatching Facts"

It is the greatest portfolio of practical hatching information ever published — a sure guide to profits that should be in every poultry raiser's hands, old and young—brimful of good, sound information that will interest fathers, mothers, sons and daughters. And remember it is free.

Your name and address brings it. A postal will do. With the book comes my 10-year personal money-back guarantee—my one, two or three months' home test. Also the best opportunity anyone ever had to make extra money with a hatching outfit—

My \$1300.00 Gold Offers

Conditions so easy anyone may receive biggest pay

Learn how I paid one Belle City user \$156.25—another \$50.00 two others each \$45.00—and many others from \$33.00 down

The free book illustrates and fully describes my 25 Times World's Champion Belle City Incubators and World Famous Belle City Brooders—tells how they are made—shows them in actual colors. These great, big colored pictures give you an exact idea of this wonderful hatching outfit—402,000 in use—the kind used by all the Belle City World's Championship Winners—the kind used by the U.S. Government Department of the Interior—the kind used by Agricultural Colleges—the kind that won the gold-lined silver "Tycos" cup—the kind that will give you hatches that you will be proud of—the kind that will win big cash profits for you—the kind that will put you into the Championship Class from the start.

*"Simply beats the dickens
How it hatches out the chickens"*

Book shows that Belle City has everything worth having in and on an incubator, copper tank, double disc self-regulator, safety lamp, double walls and double door and dead air space all over, with roomy nursery and strong egg tray. "Tycos" thermometer, egg tester, Miller sun hinge burner, funnel, everything you need, including valuable instruction book on operating, hatching and care of chicks. The book tells you all about my World Famous double walled top heat Belle City Brooder, guaranteed to raise largest percentage of chicks every time—a fitting companion to my World's Champion Belle City Incubator.

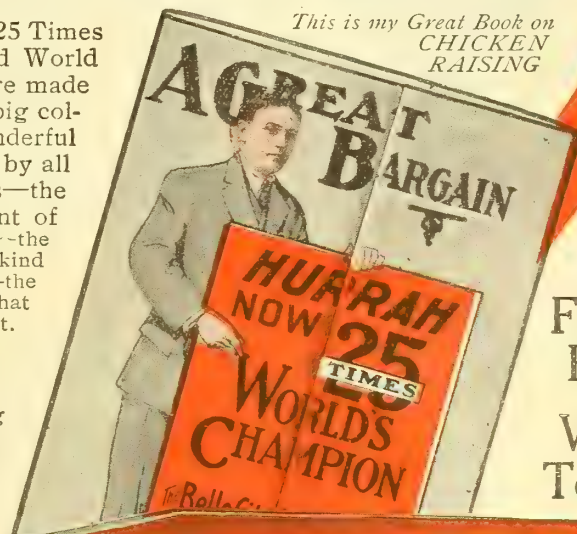

Remember my free book—my 10-year money-back guarantee—my low price, freight prepaid—my \$1300.00 Gold Offers—everything comes to you just as soon as I receive your name and address. Write me today.

Aldrich White Orpingtons

"The Strain of Quality"

If you are not satisfied with the variety of poultry you now have, try the White Orpingtons and secure your foundation stock from the Aldrich Poultry Farm, who have

First Cock, Chicago Coliseum, 1915

Combined Show Qualities with High Egg Production

and you will realize a handsome profit, as you can then advertise Aldrich Strain White Orpingtons and get good prices for your stock and eggs.

The demand for White Orpingtons is steadily increasing as it is now generally realized that no other breed will lay eggs of as great a value during the year. This is shown by the official records at the National Laying Contest this season where an Aldrich Strain Wh. Orpington pullet led the entire contest for ten months, laying 200 eggs, 110 of them in the winter months, a total value of \$5.70.

No other variety of chickens is more gentle, beautiful, or easier to grow, and hardiness, quick growth and vigor are White Orpington characteristics. The Aldrich Strain White Orpingtons lead all varieties of poultry in

High Egg Production and Show Qualities Combined

the combination that pays. Why not take these facts into consideration and purchase your foundation stock from a strain that is

Bred to Win as Well as to Lay

when you can obtain it at prices no greater than asked by any reliable breeder who produces trap-nested stock only for egg production but not good enough to show. Remember it is quality that pays in the long run.

During the past three years Aldrich White Orpingtons have won more First Prizes at Chicago and Madison Square Garden than all our competitors combined.

During the present season at America's four greatest shows, Allentown, Buffalo, St. Louis and Chicago Coliseum Aldrich White Orpingtons, on 46 entries, have won 38 regular prizes, 21 special prizes, including 17 first prizes and 11 second prizes, making a record never before equalled by any one breeder of Single Comb White Orpingtons in America. Our First Prize Cockerel was the sensation of the Chicago Show and these birds won in the strongest class ever shown in America.

Our Customers Also Won

a large number of the prizes offered in this show as well as hundreds in shows in all parts of America, including the Great Panama-Pacific Exposition and the Grand Central Palace, New York.

Chicks.

THE MACKAY

Colony Brooder

The original coal-burning, self-regulating Colony Brooder that broods up to 1000 chicks in one flock, in one building, with much less expense than an equal brooding capacity burning oil or gasoline.

Just Compare this "Better" Brooder With Its Bottom Draft

point for point with other brooders and you will see why it is called the "better" Brooder. Every stove you ever used had a bottom draft below the grate and below the fire, the same as the MacKay Colony Brooder Heater.

To make the fire burn up and produce more heat quickly, a bottom draft *below* the fire is absolutely necessary. To raise more and better birds, it is absolutely necessary that more heat be produced quickly when the weather suddenly changes colder, to keep the babies warm, comfortable and healthy.

The bigger and heavier MacKay Heaters are made completely of cast iron. The rocking duplex grate grinds down the clinkers every time, and keeps the fire burning around the edges. The heater base is always cool, and no hot coals can fall into the litter which insure absolute safety from fire.

The heavy galvanized iron deflectors last a lifetime. The mechanically perfect and accurate double temperature regulator compels a correct heat for the chicks all the time, no matter what the weather. The special construction of the regulator prevents the escape of gas into the room.

The conical deflector first directs the heat down toward the floor, over the backs of the chicks, and then warms up the room to a comfortable temperature so that the babies will leave the Brooder and exercise and keep in good condition.

Junior Size—Two Other Sizes

The MacKay Junior is the greatest value ever offered, as it has exactly the same operation and double regulation—with top and bottom drafts—as the two larger and more expensive models, and is made from the same strong and lasting materials.

The MacKay is the original self-regulating Colony-Brooder of its kind, the first on the market, the longest in use and the one that has passed the real test of time.

Big Illustrated Catalog Free

Write today for handsome catalog that fully describes and illustrates the many advantages of the MacKay Colony Brooder. And kindly send us the name of your dealer.

Quality Will Tell

At the big Chicago Coliseum show, in classes that held the best birds ever shown there, our birds made the remarkable win of

23 FIRSTS

9 SECONDS 7 THIRDS 3 FOURTHS 2 FIFTHS

A total of 44 prizes out of 55 entries, the largest win of the show.

This wonderful winning proves that "Shoemaker Birds" are the birds for you to buy. It tells the story of why our business has increased year after year ever since 1889. Our motto is "a dollar's worth of value" for every dollar received, that is why we retain our old customers. We want you to know all about our big factory where we manufacture our own incubators and brooders, our mammoth poultry plant where these prize winners are bred and raised, our method of square dealing, so

Send for Our 1916 Book of Poultry

It is not like an ordinary catalog, but a big 200-page text book on poultry breeding in all its branches; no other breeder in the country issues one like it. It tells you all about our wonderful birds, giving you prices on them; all about our Globe incubators, brooders and other appliances, giving the prices on same. It contains a number of color plates of leading varieties of fowls, showing the birds in their natural plumage. It tells you all about poultry ills, how to prevent and cure them, tells you what and how to feed. In fact, it is a book that if interested in poultry you cannot afford to be without. Write for it today, enclosing 15 cents. If you think the information on poultry contained therein is not worth the money, we will cheerfully refund same.

Globe Incubators and Brooders

are the best machines on the market today and we are willing to prove it. We use the most modern of machinery, our workmen are the best that money can employ and no machine leaves the factory until it passes the most rigid of examinations, for our good name is back of every one of them. Our motto is "how good we can build them," not how cheap. The remarkable hatches which our customers obtain is proof positive that you can afford to buy but one incubator and that is the GLOBE.

A WEALTH OF POULTRY KNOWLEDGE

\$1

**All Three for the
Regular Price of One**

\$1

This offer will appeal to every red blooded poultryman. The monthly publications embraced in this offer are leaders in their chosen field and well known throughout the country. All three are pioneers—they have been tested and have passed the final examination—the “survival of the fittest.”

American Poultry Journal, Chicago, Ill.

Established 1874

Has the envious reputation of being “The One Great Poultry Paper of America.” It's the oldest poultry paper in America and the largest and best poultry paper in the world. Its circulation covers the entire United States, Canada, Mexico, and several hundred copies are sent to foreign countries where the best is considered just good enough. It contains from 68 to 252 pages each issue, and is mailed to subscribers promptly on the first of each month.

American Poultry Advocate, Syracuse, N. Y.

Established 1892

Is one of the most widely known and consistently advertised publications in the field. It is composed of interesting and instructive reading and is conceded to be one of the best, clean-cut poultry papers in the east. Published monthly.

Poultry Item, Sellersville, Pa.

Another “breeder's choice,” is well edited, progressive, and instructive, finding popular favor among those poultrymen who enjoy good editorials, not “muckraking.” The helpful hints given in the many articles are advantageous to both amateur and professional. Published monthly.

These three papers, the choice of breeders, will be sent to you postpaid every month for one year, at half price.

American Poultry Journal, 1 yr., \$1.00	} All 3 for \$1.00
American Poultry Advocate, 1 yr., .50	
Poultry Item, 1 yr., .50	

The three papers being sold together for the price of American Poultry Journal alone makes this one of the best offers which can possibly be made.

Both new and renewal subscribers may take advantage of this offer. New subscriptions will commence with current issue. Renewal subscriptions will be extended one year from expiration of present subscription. This offer void after May 31st, 1916.

H. H. Johnson

Why Has OLD TRUSTY Got Hundreds of Thousands More Owners Than Any Other Incubator?

WHY is it that Old Trusty outsells all other incubators three or four times over? Why have his sales built up the largest incubator business in the world? And why is it that from Maine to California experienced poultry raisers depend upon Old Trusty to the limit for making big average hatches in cold weather or any time of the year?

Reader, there can be but one answer. It must be the way Old Trusty is built and the experience that's back of him. You see there's a lot we don't forget in building Old Trusty. We don't forget, for instance, that an incubator has a top and bottom when putting on the asbestos.

We don't forget that it *must* make big hatches in *cold weather*. We don't forget that redwood *must* be *clear* and *flawless* if it's to keep the heat in and cold out. In short, we don't forget that it *must* hatch the *biggest average*, not once, but *every* time, and not for one year but for *many years*. We guarantee Old Trusty for ten years.

Another thing, *we* do the building complete. Old Trusty comes ready for business the minute you take off the crating and screw the legs on.

New Steel Legs

I was showing a customer through our factory the other day and he picked up one of the new steel legs we are putting on Old Trusty this year. "What's this?" he asked. I told him. "Why," he said, "I thought it was a mould or a pattern. You don't mean to tell me that Old Trusty gets four heavy steel legs like this. They would support a ton."

Maybe they would but that is not the idea. We simply saw a chance to make Old Trusty better and are doing it. Did you ever notice the long blade on a carpenter's square? Old Trusty's legs are made of the same kind of material, only a little thicker and turned on one side to an angle. Made out of cold drawn steel.

At another place he noticed a barrel of copper scraps left from making the hot water heating plant. "What do you do with these small pieces?" he asked. It brought up a point. We sell our copper scraps for the highest price paid to any incubator company for like material. That's because the copper men know that nothing but the pure quill is used in making Old Trusty's copper tank.

The Trays Are Made to Last Too

Farther on he picked up an egg tray. "Why," he said, "that's strong enough to carry rocks in." Maybe his statement is overdrawn, but we do go the limit in making Old Trusty's egg trays strong and substantial. I don't know of anything as worrying as handling eggs on a rickety tray. We finish the job right by sandpapering the edges of the trays so they slide in and out of the machine easy.

The point is, Old Trusty is, built as good as we can make it after 20 years' experience. And with all this quality Old Trusty is not high priced. He would be if built by the ordinary organization or in the ordinary output where big production could not make a low price per machine.

Our organization is home grown and home trained. We have no book-read "experts" drawing high salaries; no watered stock to pay dividends on. We built from the ground up, and the fact that we now operate the largest exclusive incubator and brooder factory in the world doesn't affect us any.

Reader, Why Not Get in Touch With Us?

Let's send you our 136-page book. The same reasons that make Old Trusty the big leader of them all are the same reasons why you should have Old Trusty working for you. Now is the time to start hatches—and it's the time when you need an incubator built like Old Trusty.

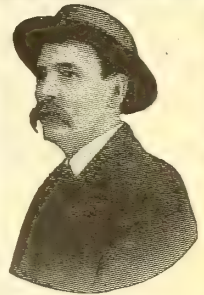

Remember, we make quick shipment from factory at Clay Center, or warehouses at St. Joseph, Mo., or Seattle, Wash., and that Old Trusty is

Still Less Than \$10

if you live east of the Rockies—a little more if you live farther west.

Now Is the Time

Send in Your Name Today So We Can Send You **Free** 136-Page Johnson Book

M. M. Johnson
Inventor of Old Trusty
and Founder of the
Largest Incubator
Business in the World

THERE'S no time like the present if you want the biggest profits in fries and broilers next summer and in eggs to sell next fall and winter. Let's talk it over. Just give me your name and address on the coupon, or if you prefer just drop me a postal. Better still, write me a letter. Anyway, send along your name and address so we can mail the book right back postpaid. I promise here and now not to hound you for an order with "form" letters. A "form" letter never leaves the Johnson office. All we want is a chance to present our case. In this book we give you

20 Years of Johnson "Know-How" With the Experience of 650,000 Customers

Read the same ideas that started 650,000 customers on the way to poultry success and profits. That's a mighty lot of customers, isn't it? Yet it's thoroughly reasonable when you *know* the Old Trusty hatcher—the big hatches it gives time after time, season in and season out.

It may interest you to know that two of the leading farm papers recently finished an investigation that showed, in one case, every third incubator among their readers to be an Old Trusty; in the other case every fourth machine was an Old Trusty. These papers circulate all over the country and their readers mentioned 177 different makes of machines.

The point is that Old Trusty, with a majority of hundreds of thousands of users, must be an extra good incubator. It must be easy to operate. It must be dependable.

Quick Shipment

We have your Old Trusty already crated and waiting to ship from factory at Clay Center or warehouses at St. Joseph, Mo., or Seattle, Wash. Will get your machine to you in double quick time from nearest point.

Now is the time to start hatches—and the first step is to get in touch with us. See how we started 650,000 others—then

A WEALTH OF POULTRY KNOWLEDGE

Save One Dollar

Here is your opportunity to get the three oldest poultry papers in America at half price. All three are published monthly—filled with good, sound, helpful advice, which may save you many times the cost of your subscription.

**Three for
the price
of One—**

That's what
you get when
you subscribe
to this com-
bination at
this time.

American Poultry Journal, Chicago, Ill.

Established 1874

"The One Great Poultry Paper of America" is conceded by all to be the leading poultry paper of the world. It contains from 68 to 252 pages in each issue, profusely illustrated; contains no free reading notices or puffs for advertisers, but sound common sense articles, the kind that are profitable to both amateur and professional poultrymen. Mailed to subscribers promptly on the first of each month, it arrives when expected and avoids disappointment.

Western Poultry Journal, Cedar Rapids, Ia.

Established 1889

Has long been recognized as one of the most up-to-date and progressive poultry papers of the West. Edited by E. E. Richards, the present President of the American Poultry Association. Clean, instructive common sense articles on the care of poultry—and editorials of like nature make this one of the favorite poultry papers in the Western States.

Poultry Keeper, Quincy, Ill.

Established 1883

Is the second oldest poultry paper of America. Although not as large as the other two, it has a following of readers who stand by it like the "Rock of Gibraltar." The many interesting articles each month make it well worth reading and it fits nicely into this well selected combination of poultry papers.

American Poultry Journal, 1 year, \$1.00	} ALL FOR \$1.00
Western Poultry Journal, 1 year, .50	
Poultry Keeper, 1 year, .50	

No matter where you are located, how many chickens you keep or how much you know about poultry, you cannot afford to let an opportunity like this slip by. Think of it—ALL THREE for the regular price of American Poultry Journal alone.

Both new and renewal subscribers may take advantage of this offer. New subscriptions will commence with current issue. Renewal subscriptions will be extended one year from expiration of present subscription. This offer void after May 31st, 1916.

POULTRY RAISERS, Here's My Best Incubator and Brooder Offer in 21 Years of Experience

J. S. GILCREST
President
Life Member American
Poultry Association

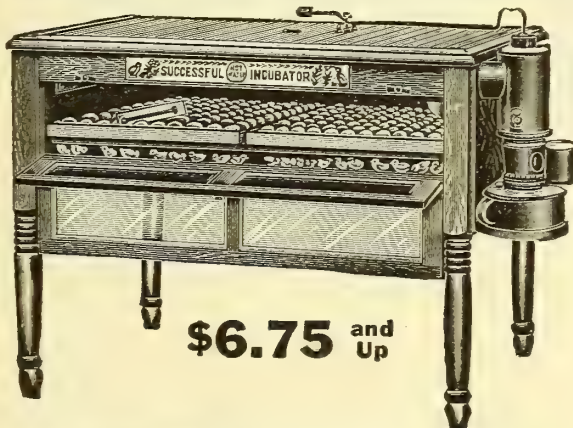

Send Me Your Name at Once for Full Details

IN all my experience I have never been able to equal the offer I am making this season on "Successful" Incubators and Brooders. This year, when prices in materials everywhere have advanced, I am not asking an extra nickel over the former price for the "Successful"—the big king of them all in quality—yet I am giving you the same heavy copper tank, the heaviest on any incubator made; the same leak-proof and wear-proof tank construction and unbeatable case. In short, every one of the big quality features that have made "Successful" Incubators the pride of successful poultry raisers in all parts of the country. Read the 20 Big Points for success in panel to the right and write me for this remarkable quality and price offer. Go in for big profits and succeed with

"SUCCESSFUL" Incubators and Brooders

Remember that back of these machines there are 21 years of success. They have stood the test for more than a generation. The principle of construction has never called for change. It has made good and more. Was built correct in the first place—has proved economical, dependable and productive of big hatches of sturdy, healthy chicks.

No matter what incubator you now favor, get my offer. Learn how you can be sure to succeed with the "Successful." Not only for one year—but for many years—not only with spring hatches but hatches at any time of the year, even in coldest weather—this is the incubator that I personally and the Des Moines Incubator Co. stand back of and positively guarantee will hatch larger and stronger chicks and larger percentages than any other incubator when operated under the same conditions. The only incubator in the world that is cabinet made. The only hatcher that heats around the colder edges of the body first. Guaranteed to vary not over a fraction of one degree throughout the entire hatch—because of the fact that our own patented lamp and wafer thermostat regulator are 99 9-10 per cent perfect. Write today for my "Successful" catalog free.

\$6.75 and Up

Tells the real facts about present-day construction in incubators and brooders. Frank and comprehensive—tells how to insure success. Write for my book if only to get my low price offer and guaranty—the strongest guaranty ever put behind an incubator. Succeed with the "Successful" this year. You want "Successful" Brooders, too—the only brooders made with automatic heat regulator—therefore the best chick preservers. Address

J. S. GILCREST, Pres. and Gen. Mgr

**Des Moines
Incubator Co.**

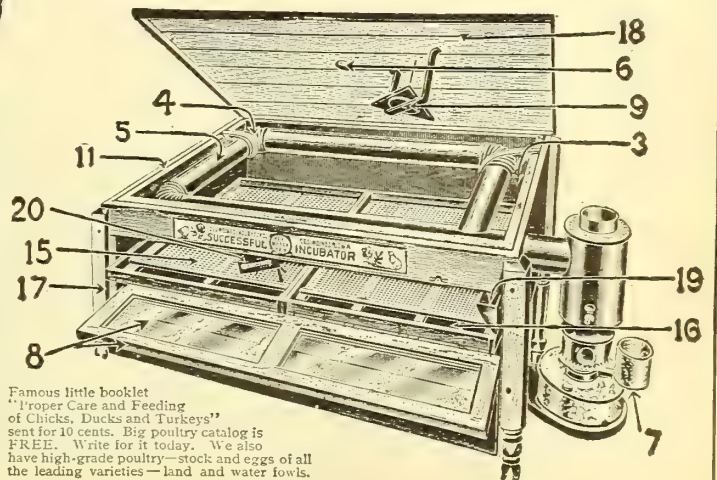

**1 Second Street
Des Moines, Iowa**

The 20 Big Strong Points for Success

- 1—I personally guarantee that the "Successful" Incubators will hatch larger and stronger chicks and a larger percentage than any other incubator when operated under the same conditions.
- 2—My remarkably low price offers with high quality.
- 3—The only hatcher that heats the colder edges of the body first.
- 4—Round corners on tank, giving faster current, more heat, even regulation.
- 5—Heaviest copper tank used on any incubator.
- 6—Only one scientifically ventilated. Admits cold air at center of top. Does not create draft which dries out eggs.
- 7—Safety attachment on lamp burner—provides absolute protection from fire.
- 8—Only incubator with two glass doors—through which thermometer may be seen.
- 9—Combination wafer thermostat regulator.
- 10—The only machine guaranteed with a guaranty that guarantees and evades no issue.
- 11—Built like a refrigerator.
- 12—Case non-warpage.
- 13—Weights more.
- 14—Costs less per pound.
- 15—Strongest, most durable egg trays.
- 16—Nursery under egg trays. The greatest feature applied to artificial incubation.
- 17—Detachable legs, allowing machine to be stored in very small space.
- 18—The only incubator in the world cabinet made.
- 19—Simple, effective application of moisture when necessary.
- 20—Adjustable thermometer. Never necessary to open doors or pull out the trays to read temperature. Thermometer is stationary; chicks cannot knock it over.

Poultry Lessons FREE

Easily worth \$25 or more. 20 lessons in all, the real genuine down-to-brass-tacks facts that explain everything just as you want it. Free to everyone buying a "Successful" Incubator or Brooder.

Fresh Green Feed 15¢ Make Hens Lay Per Bu.

Turn loafing hens into industrious layers—have eggs to sell at top-notch prices by feeding sprouted grain. One bushel oats, wheat or rye makes three bushels of tempting, crisp green feed in the

"SUCCESSFUL" ALL-STEEL SECTIONAL GRAIN SPROUTER

Answers the feed problem—takes care of young chicks too—makes them grow. Made entirely of steel—double walls—fireproof—cannot warp, shrink or swell. Lasts a lifetime. Write today for booklet and 1916 offer.

Famous little booklet "Proper Care and Feeding of Chicks, Ducks and Turkeys" sent for 10 cents. Big poultry catalog is FREE. Write for it today. We also have high-grade poultry—stock and eggs of all the leading varieties—land and water fowls.

JOHN G. POORMAN
TINLEY PARK, ILL. U.S.A.

POORMAN'S

200 EGG

STRAINS

Stock, Eggs and Baby Chicks

from profitable layers is your only guarantee for success in the poultry business.

ISN'T it a serious matter when eggs are selling at 40c to 60c a dozen and your hens are not laying? Ask the man who has failed. Also ask him if he would recommend the breeder he bought his stock from.

You cannot be too careful in the selection of your foundation stock; the stock from which you will produce your future layers. **I breed for eggs** and can supply you with stock that will lay when the egg prices are high.

THAT MEANS YOUR SUCCESS

Eggs

My breeding pens are now mated, and I can usually make shipment of eggs promptly upon receipt of your order. I would, however, advise that your order be booked in advance. This will assure delivery when you desire them. Prices, 10c, 20c and 30c each.

LADY ALFARATA, Record 301 eggs

BUSY BESS, Record 285 eggs

Baby Chicks

I will commence hatching operations January 1. I am now booking orders for baby chicks for delivery any time thereafter, weather conditions permitting. Early orders simplify matters and assure mutual satisfaction. Instruct me to book your order now. Prices, 20c, 35c and 50c each.

Buy Your Foundation Stock Now

In all of my eight varieties, namely, White and Buff Orpingtons, White and Barred Rocks, Rose and Single Comb Reds, White Wyandottes and Single Comb White Leghorns, I can supply Breeding Stock, young or old, that will produce a future flock of the kind that has in the past given entire satisfaction to over 3,000 customers. I herewith present your opportunity to start right. My free instructive catalog has helped others and will undoubtedly help you. Write for your copy today.

IRA C. KELLER—PIONEER POULTRYMAN

IRA C. KELLER, Prospect, Ohio, (one of the originators of Golden, Black, Violet and Buff Laced Wyandottes, the two last named varieties being discarded a few years ago), was born in 1863. He comes of a poultry family, his father before him being a fancier. At the age of 8 years, assisted by his brother of 18, who in the 70's, 80's and 90's was an artist breeder and judge, mated their first pen of American Dominiques.

Since then he has bred nearly all the older varieties, the Sebright Bantams practically all his life and Wyandottes for 33 years. He did his first judging when 20 years old and since then has placed awards at the leading shows, including Madison Square Garden. A great admirer of lac-

ing and without doubt the leading authority on same. He is also a great believer in line breeding and can give you breeding on his birds for 25 and 30 years back.

He has exhibited more Wyandottes than possibly any other breeder in the country, and has shown at Madison Square Garden since 1891. In 1893 he was selected as one of the committee to revise the Standard of Wyandottes. Was President of his State Association, officer in White and Golden Wyandotte Club, and is an officer in Silver Wyandotte Club.

His first advertisement appeared in the American Poultry Journal 28 years ago and has appeared in every issue since then.

The Production Cost of a Dozen Eggs

Some Business Facts by An Expert in Cost Accounting Who Is Also
An Experienced Poultryman. *By J. F. Robinson, South Weymouth, Mass.*

WHAT IS THE NET COST of a dozen eggs to the poultry keeper? An Eastern paper puts it at 12 cents per dozen—where one has to buy all the food fed. Our estimate of the average cost of a dozen eggs in California is 10 cents.—Editor Harker of *Pacific Fancier's Monthly*.

"We do not believe that good eggs from well-fed hens can be produced at a cost of less than 24 cents per dozen, average for the year."—Editor Woods of the *AMERICAN POULTRY JOURNAL*.

I am wondering if our California editor is not like a friend of mine, about fifty years of age, who was raised on a farm, but at present hardly knows a pullet from a cockerel. In a little different form than I have stated it below, he was always telling of the great laying and small cost of the flock on his father's farm.

"Why, John," this friend was wont to say,
"Those mongrel hens laid nearly every day,
And as they cost us almost nothing for their feed,
They gave us all the money we did need
With which to buy our groceries."

When I put the question to him
"How he figured out the pay?"
"Why they made their home on a hickory limb
And scratched their feed from a stack of hay."
And thus was his statement proven.

Over and over again do we hear the statement made, "My eggs are nearly all profit," and "I have the best flock of layers in the neighborhood," when in fact the maker of these statements, because of a lack of records, generally knows

nothing whatever about either the number or the cost of eggs produced by his flock.

Let us take a business man's method of finding the cost of producing eggs and see which is the more correct, the editor of the *Pacific Fancier* or the editor of the *AMERICAN POULTRY JOURNAL*.

The real cost of an egg can be found only by taking into account all of the several items of expense as follows:

First.—Investment Cost. I am going to figure on the basis of a flock of 100 layers. The investment for such a flock would be about as follows: (a) House, \$100. This item might be made a little less but would probably be more with the present cost of materials and labor. (b) One hundred hens and pullets nearly ready to lay in this section are worth about \$1.50 each, and the buyer of these layers would thus have an investment of \$150. However, most people raise their own pullets, probably at a cost of 75 cents up, so we will say an average of \$1 each, or \$100 for the 100 layers. (c) Equipment, fences, ground, etc., at a very conservative valuation, another \$100. Total investment, \$300.

If this money had to be borrowed the rate of interest would be 6% or over. If one was withdrawing it from the savings bank, they would allow the 4% that the bank pays. For an average, suppose we put it at 5%, which on \$300 would be \$15 annually. To this amount must be added taxes, insurance, repairs and depreciation expenses.

Ten per cent depreciation is a reasonable allowance on buildings, fences and equipment, with an allowance for land and water taxes or \$20 on the \$200 property investment. On stock, the depreciation will depend on the care, but I have found that with the best of care, I lose yearly from two to four hens out of each 100. Let us put the average at three hens or \$3 and we find our total investment cost to be: Interest, \$15; property depreciation, \$20; stock depreciation, \$3. Total, \$38.

Second.—Food Expense. I feed substantially as follows:

To each 100 hens—morning, 5 quarts (liquid measure) scratch grain; noon, 3 to 4 quarts (dry) sprouted oats; evening, 10 to 12 quarts grain. Dry mash in hoppers all the time. Of mash they eat from 5 pounds to 8 pounds daily. This makes an average of about 30 pounds of feed not counting grit, oyster shell, etc. I buy my grains and the ingredients for the mash in 100-lb. lots and do my own mixing. In this way I find that year in and year out, the cost is approximately \$1.90 to \$2 per 100 pounds.

At above rate of feeding, the cost would be then, 30 pounds daily at an average of \$1.95 per 100, or \$214 for the year. I believe this is about the average amount of food given by the average poultryman, and the price about the average price thruout the country. The man who raises this food would, of course, figure selling price, which in the case of the grains would be some less; on the other hand, a great many buy ready mixed foodstuffs and they, of course, pay considerably more. The Mediterranean varieties would perhaps eat a little less, but the average will be about as shown. I believe, if anything, more rather than less.

Third.—Labor Expense. Before writing this I wrote to the proprietor of one of the most successful poultry farms in the United States, asking him two questions: (a) How many layers would one man be expected to care for. (b) At what price could competent working poultrymen be obtained. His answer, and it appears very reasonable to me, was as follows: (a) "One thousand laying hens and raise his own pullets." (b) "From \$30 to \$75 per month."

I am figuring on a man caring only for his layers and not giving his time to raising pullets, so I have doubled the number of hens and put the labor at \$40 per month, which makes it (a) 2,000 laying hens; (b) \$40 per month. Now let us reduce the 2,000-hen flock to our 100 flock and we find we have a labor expense of \$2 per month, or \$24 per year. "Oh, but I do my own work," says someone.

Well, suppose you do; is not your time worth as much as the time of the hired man? And if so, is it not right and proper that it be figured in as an expense? Does the business man figure in his salary as a part of the expense of conducting his business? He certainly does and not at the hired man price, either. Poultrymen, if they wish to succeed, must use business methods, not only in their work, but also in their accounting system.

We find then, that the cost of keeping 100 hens for a year is about as follows:

Investment expense.....	\$ 38
Food	214
Labor	24
Total	\$276

If I have estimated correctly, what, then, is the cost of one dozen eggs?

Let us see. In order to keep the price at 10 cents per dozen, our California hen, unless the California air has the same downward influence on egg cost that it has upward influence on land cost, would find herself under the necessity of laying 27.6, dozen or 331, eggs per year.

There are very few 300 egg hens. There are a few 200 egg hens. There are quite a few 150 egg hens but the average is nearer the 100 egg hen.

Figuring on the above basis, the production cost of a dozen egg hens. There are quite a few 150 egg hens, but the average would be 16½ cents; with a 150-egg flock, 21½ cents; and with the 100-egg flock, the cost amounts up to 33 cents per dozen.

During the years 1910-1911, I had a flock of fifty Black Langshan hens, all of them first and second year descendants of two hens; one with a laying record of 203 eggs and the other a record of 162 eggs in ten months, being with chicks the other two months. These fifty hens' and pullets' average for 1910 was 149 eggs. On account of their being more old hens, there were about one-half dozen less for 1911.

Taking into consideration the above items of expense, with the exception of labor, I found the average cost of eggs by months, for these two years to be: January, 42 cents; February, 37½ cents; March, 15 cents; April, 11 cents; May, 12 cents; June, 9½ cents; July, 9 cents; August, 9½ cents; September, 13 cents; October, 35 cents; November, 34 cents; December, 27 cents, or an average for the year of 21.2 cents per dozen. Adding the labor cost of 24 cents per hen or about 2 cents per dozen, we have about 23 cents, the actual cost of a dozen eggs from a 150 egg flock.

So much for the production cost. Every successful business man after finding the cost of putting his stock in the store, estimates the cost of disposing of the stock, and together with his desired profit, adds this to the production cost in order to arrive at the price he expects his customers to pay him.

Unfortunately poultrymen have not arrived at the time when they can set their own price, but in getting at the real cost of an egg or in estimating capital needed to engage in the business and income to be derived from the business, this selling expense becomes a legitimate and necessary thing to be taken into consideration.

If all eggs are sold "at the door," and the customer brings his own carriers, the selling expense will be almost nothing. If eggs are sold for setting, the expense will be heavy. If shipping to the market the expense will be made up of crates, express and broken eggs. I should say that a reasonable estimate would be two or three cents per dozen. This added to the production cost would make it necessary to receive an average of 25 cents to 26 cents per dozen THE YEAR AROUND BEFORE PROFITS BEGIN.

Have I set it too high? Possibly, but unless my reasoning is faulty and my figures liars, I would say no.

There would be fewer failures in the poultry business if before investing his money, the prospective poultryman would figure his "outgo" and "income" on the above basis instead of on the strength of advertisements, reading "So many thousand dollars on a city lot" by "purchasing your stock direct from our 200 or 300-egg strain" and "Kept in Mr. So and So's small coops," "Tested out with Mr. Infallible's infalli-

ble method," and "Fed on food at 10 cents per bushel as per Mr. One Dollar A Tell's secret," or even accepting such statements as the one appearing in the *Pacific Poultry Monthly* and numerous other poultry journals, published thruout the country.

Yes, even with this "high cost of eggs," there is probably as large a per cent of profit in poultry as in most other lines of business. The profit, however, comes, only as the result of a *reasonable investment of money and a large investment of hard, intelligent effort.*

Just as I finished the above article, there came to my desk a copy of *Poultry Post*, and on Page 22, in answer to a beginner's question, the editor says, I always figure that it (food) costs at least \$1 per year per bird, which includes the cost of *all green food, beef scraps, charcoal and grit.*"

Grains at present cost in 100-pound lots as follows:

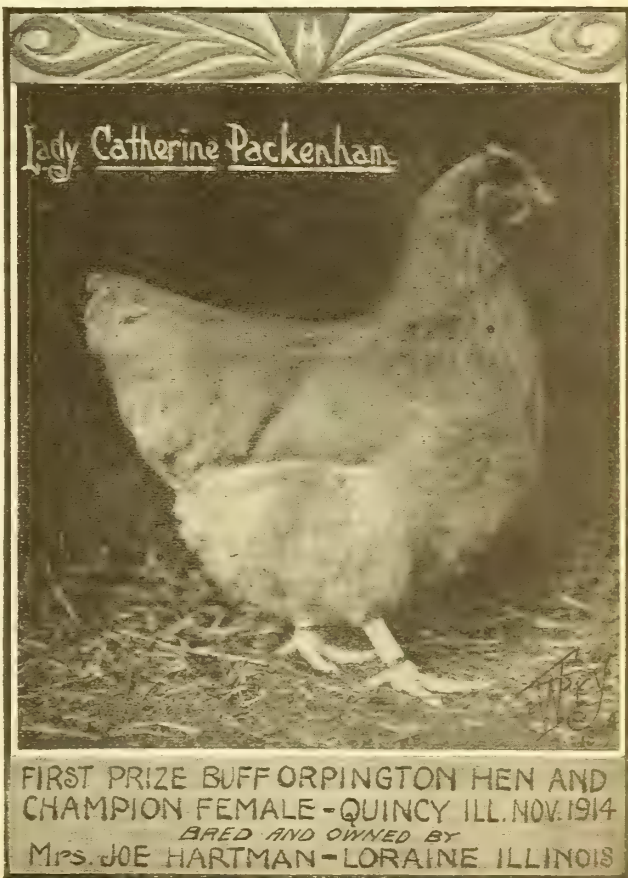

Cracked corn, \$1.68; wheat, \$2.10; oats, \$1.80; beef scrap, the cheap grades, \$2.50. Making a mixture of 100 pounds cracked corn, 60 pounds wheat, 40 pounds oats and 20 pounds of scrap, we have a fairly good egg mixture at a cost of \$1.89 per hundred weight.

The *Post's* \$1 then would buy Mr. Beginner almost 53 pounds or 35 quarts of poultry food. Allowing nothing for morning, mash food, green food, grits, etc., we could give one quart of food once each day to each ten to eleven hens.

Yes, Mr. Beginner, you might *keep* a hen with one dollar's worth of food per year, but if your wish is to have "Mrs. Biddy" *keep you*, it will be necessary to at least *double* this amount.

Quarantine New Comers.

Never bring a fowl from another yard and place it in your flock until you have kept it in quarantine. Provide a coop for that purpose, and place it at some distance from the yards, keeping the new birds confined long enough to know if they are healthy. The strictest precautions are necessary, or you will bring roup or cholera into your yards before you are aware of it. And, what is more, even if there is no disease, quarantine for fear of *lice*. Always be on the watch against lice, for should a lousy bird get into the yard it will soon stock the whole.—*Farm and Garden*, 1887.

An Island, Standardbred Poultry Plant

Report of a Visit to Owen Farms on Marthas Vineyard and
Observations by the Editor.

By Prince T. Woods, M. D.

THE NOVEMBER DAY selected for our visit to Owen Farms was not a particularly promising one. When we reached Woods Hole, Mass. just before noon, the wind was blowing a gale and every few minutes there was a flurry of snow. However, having started, we decided to see it through and boarded the Steamer "Uncatina" for the seven mile sail to Oak Bluffs on the Island of Marthas Vineyard. It was too cold and raw to stay out on the windy deck and in the

cabin some of the passengers were making pretty bad weather of it while the little steamer pitched and rolled. We enjoyed the trip immensely for we like a salt water journey, no matter what the weather may be.

Mr. Delano met us with an auto and we breezed merrily over the tar road to the farms and then, with true New England weather perversity, the sun came out bright and clear though the wind still blew in raw and cold from the open sea. It most decidedly was not a day to see poultry at its best. Yet we did see rather more than 5,000 good Standardbred specimens in fine fettle, with abundant health and vigor. In spite of the unfavorable weather conditions the Owen Farms' flocks made a fine showing and a good impression.

Maurice F. Delano became the proprietor of Owen Farms in 1913, by purchase of the flocks and good will of the business from the founder William Barry Owen, for whom he was manager since 1905. Mr. Delano is about 40 years old and has been breeding Standardbred poultry since 1889. He has been prominently identified with specialty club and poultry association work since 1900 and is an American Poultry Association general poultry judge. While personally managing the work of Owen Farms, Mr. Delano has a leaning toward specialty breeding of Orpingtons and of S. C. Rhode Island Reds. He is ably assisted by his farm superintendent Frank H. Davey, a poultryman with thirty years experience in breeding Standardbreds, who gives special attention to the mating and breeding of the farms' White Wyandottes and White Plymouth Rocks. Besides Mr. Davey, Mr. Delano employs six men to care for the Owen Farms flocks. The office management of the farm business is personally conducted by Mr. Delano, who appears to have no difficulty in keeping two stenographers exceedingly busy. We noted that this plant has its sales department particularly well systematized and keeps careful record, with history and description, of each specimen sold and a remarkably complete record of all sales of hatching eggs, with reported results.

Such data must be of considerable value in handling a Standardbred poultry business and in continued dealings with old customers.

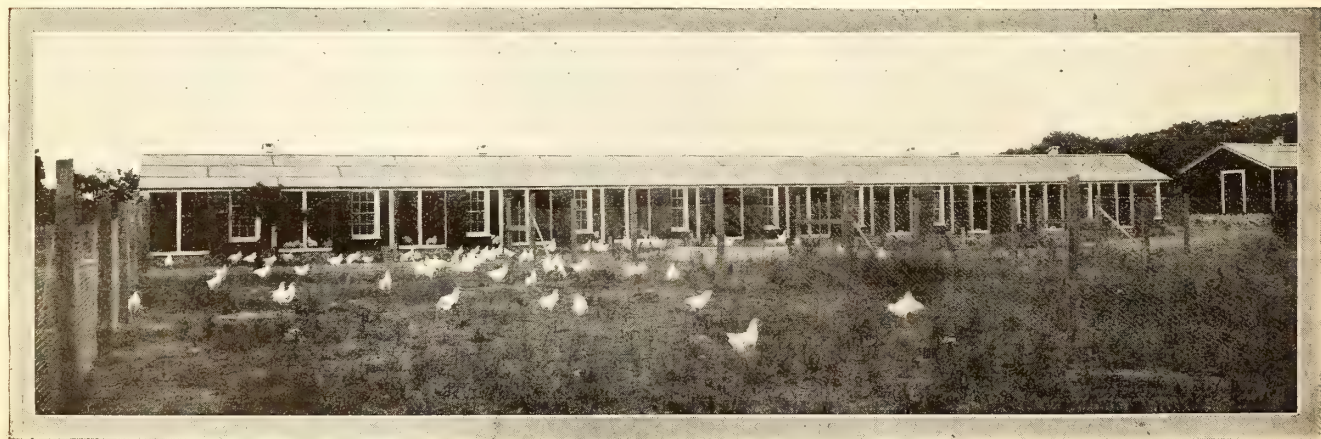

We found Mr. Delano decidedly optimistic concerning the outlook for the Standardbred poultry business in 1916. He said that business the past season had been satisfactory and he believed much better than the general run of business since the beginning of the war. He was particularly pleased with the way orders were coming in for the month of November and told us that Owen Farms' sales from November 1 to 17, 1915, had been exactly \$5,394.11 and he was confident that the demand will increase as the season advances. He showed us one nice order, just received from South Africa, for White Wyandottes and Rhode Island Reds, and the accompanying draft for £71-2-6. Foreign business with South America, Australia, New Zealand and South Africa, he considered to be improving and decidedly promising. One can judge as to the accuracy of our estimate of the number of fowls car-

ried on Owen Farms at the time of our visit, when it is stated that the feed bill for the month of October alone amounted to something over \$881.00.

While the breeding yards were not mated up in early November, we were told that the farm would carry this coming season: Rhode Island Reds, 20 breeding yards of first quality and from 10 to 20 yards of second quality stock; in White Plymouth Rocks, 20 yards of first quality and 10 of second; in White Wyandottes, 20 yards of first quality and 10 of second;

Front view of one of Owen Farms long breeding houses. This house is 117 feet long by 16 feet wide and is about 7 ft. high at eaves. The photographic view shows this house as originally built. The double doors in front of each pen have been boarded up 3 ft. from the bottom and the top is closed by a cloth curtain on a wooden frame hinged at top to swing in and up. When the curtains are closed the glass windows are opened part way at top. The houses are plastered inside and kept well whitewashed.

in White Orpingtons, 20 yards of first quality and 20 of second; in Buff Orpingtons, 20 yards of first quality and 10 to 20 yards of second; in S. C. White Leghorns, 15 yards of first quality

and 10 of second, with about 100 head of utility stock in this variety.

This farm does not approve of marketing "fancier's culls" as "utility" stock; all culls are disposed of as market poultry, for which there is an unusually fine demand in summer, the summer residents on the Island regularly paying from 35c to 40c per pound for fowls and chickens. Very little business is done in market eggs, except to dispose locally of eggs not suitable for hatching purposes, all eggs produced from special matings are either sold for hatching purposes or hatched on the farm. While a considerable number of day-old chicks are sold, Mr. Delano does not favor this branch of the business and much prefers to sell breeding stock and hatching eggs.

Owen Farms has incubator capacity for 3,000 eggs at one setting. The brooder houses are equipped with International hovers and have an auxiliary heating system by a bank of hot water pipes on rear wall. Preference is given to hen hatching and hen brooding, and long houses are equipped with conveniences for natural brooding of large numbers of chicks with hens, during the winter and early spring season. Several hundred out-door brood coops for hen and chicks (mostly Hodgson type) are also used. About 8,000 chicks are raised each year and at least half, or more than half, of them are hen hatched and hen reared. Approximately 3,000 breeding birds are carried through the season. Our attention was attracted to the unusual number of good yearling and two-

year-old cock birds carried by this farm for breeding and sales purposes, the proportion was uncommonly large and we were told that, even with so large a supply to draw on, it is

often difficult to keep pace with the demand for exhibition and breeding cocks. Each season some flocks of chickens are "farmed out" on the mainland and the pick of these flocks are taken to the island in October and November.

There are about 250 acres in the Owen Farms known as Tashmoo Farm and Tashmoo Annex and here the main breeding flocks and the incubating, brooding and show fitting plants are located. The White Leghorns are kept on the Red Farm, about five miles distant from the main plant. On Tashmoo Farm there are eight long curtain-front houses for breeders, each 117 ft. long by 16 ft. wide. There are also 75 8x8 ft. open-front colony houses of the South Shore "A" type, a large cockerel house and two buildings for grain. On the Annex are eight brooder houses 90 ft. long, originally designed for use as a market capon plant. Two of these buildings are used as show fitting rooms and are equipped with a wash-room and Empire coops for cooping 400 birds. One house is used for sitting hens, another as an oat sprouting house and the other four are used for growing early chicks. The incubator cellar is on this farm and it contains room for keeping eggs intended for hatching. There is also a new 20x16 ft. Woods' open-front house on this farm, housing some 90 or more fine 1915 Rhode Island Reds. Range for growing chicks is provided by a combination of well grassed fields and woodland. The adult stock is mostly moulted in pine and oak wooded yards, where they get just

A near and detail view of Owen Farms' open-front "A" type poultry house. Dimensions, 8x8 ft. on floor; 2 ft. high at eaves, and about 7 ft. high at peak. Capacity, 10 or 12 females and a male for special breeding pen. Excellent open-air quarters that insure good health, a fine yield and fertile hatchable eggs.

the right combination of sunlight, shade, and fresh air to complete their change of plumage in the best possible fashion.

The soil of the farms is sandy, but sufficiently substantial to carry a good growth of grass. There is sufficient woodland to afford ample shelter and plenty of shade, with enough sunshine for good results. We were told that there are no varmints like skunks, weasles or foxes, and no hen thieves on the island, so that it is not necessary to shut up the flocks at night. The location is sheltered from the ocean breezes and altogether makes a very desirable place for growing Standardbred poultry. Personally, we would prefer a soil rather less sandy and a farm less in the valley, but with the attention paid to freshening yards by plowing and seeding and of cleansing houses by disinfection and free use of white-wash, Owen Farms has matters of health and sanitation in hand.

The open-front "A" houses were being put in condition for reception of winter breeding flocks and the process was an interesting one to watch, from the point of thoroughness and care,—first the houses were cleaned dry, removing all droppings and litter and accumulated dust; then followed flushing out of the house with a hose; after spraying with whitewash. These buildings have wood floors and these receive the same treatment as the walls. The result, after drying out, gives a clean, sweet house that will safely take in a valuable breeding yard of ten females and a male. The "A" houses are 8x8 ft. floor measure; 2 ft. high at eaves and 7 ft. at peak. The entire front is wire netting. A muslin curtain

on a wood frame is provided to partly close in the front in winter.

Owen Farms sells show birds on the "guaranteed to win" plan and find it a very satisfactory method. The price of the bird is fixed for actual value on the assumption that it will win

View of grass range and wooded shelter for growing chicks at Owen Farms, Vineyard Haven, Mass.

first; if the bird does not make the blue ribbon and wins second or third prize a substantial rebate is made in accord with the bird's actual winning. In other words the management of the farms backs its birds to win and gives the purchaser the benefit of Mr. Delano's knowledge of the birds and his experience with judges and judging.

While we were at the farm a large number of fine specimens were being washed, fitted and trained for the show room. Colored varieties are not washed, but are cooped, handled and posed for exhibition. White birds are given one thorough washing, being first put through a good cleaning with soap and warm water; then given two good rinse baths, and then a final dip in the blue water, which is only lightly colored. The washed birds are dried out in a warm room in exhibition coops lightly littered with planer shavings. No roosts are used in these coops. After the birds have been well drained they are removed to another coop, with dry litter of shavings, to dry out thoroughly. No straw is used in draining or in training coops on account of its tendency to stain the plumage.

Breeding birds at Owen Farms receive the following ration: Morning and night, a hand feeding of mixed corn, wheat and oats in the litter. At noon sprouted oats, all they will clean up quickly. Dry mash, in galvanized iron hoppers, before the birds all the time. In each pen a small galvanized iron cup is attached to the wall of pen just out of reach of the females; this is filled with hard grain for special use of the male bird. This plan helps to keep the males always in good condition. The dry mash formula is as follows: (parts by weight) Clover, alfalfa, gluten, each 2 parts; bran, ground oats, beef scrap, each 3 parts; corn meal, 4 parts; oil meal, 1 part.

Small chickens are fed as follows: Sweet stale bread soaked in good sweet milk and then squeezed dry, for first food. Johnnycake, well baked, is made of 2 parts bran, 2 parts corn meal and 1 part middlings; mixed with just enough sweet milk to make a crumbly mash. In this is mixed a little fine oyster shell and fine grit. The whole is put in a shallow pan and baked in a slow oven until thoroughly cooked. This is fed, crumbled up, as the main diet for first week. Give all they will clean up greedily and feed every two hours. After the second day a mixture of 2 parts bran and 1 part corn meal is kept before the chicks in hoppers. Charcoal, fine grit, and oyster shells are also kept before them.

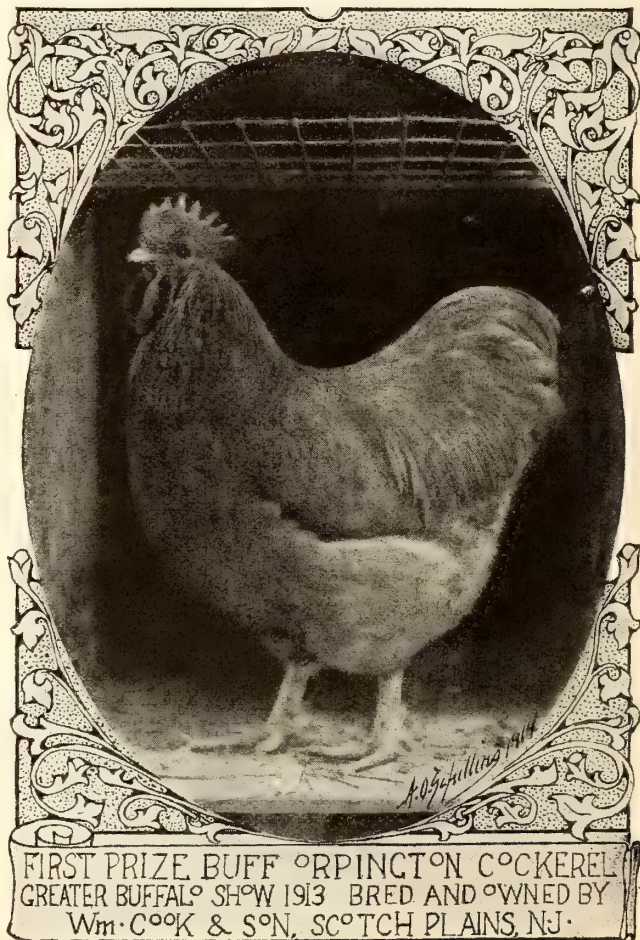

Commercial chick food is fed every other feeding beginning at end of first week. After second week the chicks get the baked cake but once a day. During the first two weeks hard boiled eggs, chopped up and mixed with the cake, are fed once a day. After the third week begin giving cracked corn, wheat and oats twice a day in place of part of chick food and baked cake which is gradually taken away from them. Dry

mash kept always before them from now on. Part of 1915 season, Pratts' baby chick food was substituted for the baked cake with excellent results. A box of sprouted oats is given to the chicks for them to scratch in and eat what they wish. All left over is thrown out the next morning and a fresh supply given the chicks. This succulent food is considered a very important part of the ration.

Mr. Delano sat up with us and talked poultry until after midnight, when we decided that we must go down to the hotel and get at least "forty winks" before the 5:30 a. m. call for a bite of breakfast before taking the morning boat at Vineyard Haven,—the morning boat in winter leaves at 6:40 a. m. and is generally on time. It was a beautiful calm, sunny November morning when we boarded the Vineyard Haven Steamer "Sankaty" bound for Woods Hole, to make the early train for Boston. Early as it was the Owen Farms birds were there ahead of us and a good sized shipment off for Buffalo and the West. An island poultry farm has its advantages and some disadvantages, but Marthas Vineyard is a mighty comfortable and attractive island home for Owen Farms and an interesting place to visit either winter or summer.

Poultry Manure.

W. Atlee Burpee credits the average hen with about one ounce of dry dung daily and says: "Fifty fowls will make, in their roosting house alone, about 10 cwt. per annum of the best manure in the world. Hence, in half a year this number of fowls, to say nothing of their offspring, will make more than enough manure for one acre of land;—1 cwt. of guano being the usual quantity applied per acre,—and poultry manure being even richer than guano in ammonia and fertilizing salts. These figures demand careful attention from the large farmer. The manure, before used, should be mixed with twice its bulk of earth, and then allowed to stand in a heap, covered with a few inches of earth, till decomposed thruout, when it makes the very best manure that can be had. The droppings must be kept dry, under cover."

Development of White Rock Pullets

Report of a Test with a 1915 Flock Made at Request of American Poultry Journal.

By James B. Morman, Kensington, Md.

THE INCREASING DEMAND for fresh eggs in late Fall and Winter makes the question of raising pullets for egg production an important subject for poultry keepers. Not only the best time to hatch chicks, but their care and management, figures in the problem of the normal development of pullets for egg laying. From the biological point of view, then, the normal development of pullets would mean their proper feeding, care and management until they began to lay.

The period when pullets begin to lay varies with different breeds. The Leghorn, of course, develops more rapidly than a heavier breed like the White Plymouth Rocks, so that the normal time of beginning to lay must be studied for different breeds of fowls and even for different strains of the same breed. Moreover, the normal development would require one to ascertain the weights of the growing chicks from time to time in order to establish a standard of growth measurement. These weights being known in the case of pullets carefully and thoroly managed as to feeding, cleanliness, comfort, and so on, would enable anyone who kept the same breed of fowls to check up his own data with those of some other poultry keeper interested in similar lines of breeding.

During the season of 1915 I undertook to study the question of the normal development of White Rock pullets. The facts as ascertained, together with the manner of feeding and managing the chickens, are presented in this article.

EGGS AND THEIR HATCHING.

It should be said at the outset that my strain of White Rocks has been bred for early and prolific laying for a number of years. The size of the flock is usually between fifty and sixty laying hens and pullets. Great care is exercised to maintain the vigor of the fowls in the flock by bringing in a new strain of males or females every two or three years. The importance of inherent vitality is accepted as a fundamental principle for the successful development of chickens.

For getting as strong chicks as possible, the natural method of hatching was chosen. No practical poultryman would be likely to argue that the results of artificial incubation are as good as the natural means of hatching, either in the percentage or vitality of the chicks hatched. The best breeders use hens for hatching chicks intended for future breeding stock, acting on the theory that chicks hatched by the natural method have more vitality. There is a great deal to be learned yet about artificial incubation before the old-fashioned method will be discarded altogether. Of course, a great many things have to be taken into consideration to get real strong chicks whether the eggs are naturally or artificially incubated. Under certain conditions which affect the vitality of the germ in the egg, it may not be at all unlikely that incubator chicks may even be stronger than those hatched under a hen. But

where care is exercised in selecting the breeding birds on both sides and they have good care, I prefer to hatch with hens rather than with an incubator.

This was the case with the chicks hatched for determining the normal development of White Rock pullets. Moreover, they were hatched early, because it is my conviction that early chicks are stronger than those hatched later. The hens were set on February 16th, 20th and 23d, and on March 1st. The earliest chicks, therefore, were hatched on March 9th and the latest on March 22d, a difference of practically two weeks between the ages of the earliest and the latest chicks.

The average weight of all the chicks on the day they were hatched was practically 1½ ounces. This corresponds with the weight of chicks hatched in 1914, so that there seems to be little or no variation in the weight of White Rock chicks hatched from healthy stock from season to season.

When a day or two old the chicks with their mothers were placed in the porch pens on the east side of the house. These pens have the ordinary lath lattice work in front, the inside of which is fitted with glass sash that can be moved back and forth. The pens have plenty of fresh air, but are free from draughts. According to the nature of the weather, the sash is closed or left partly open.

To let the chicks out on the lawn, all that it is necessary to do is to raise one of the sash by placing a brick under it. The chicks could then pass under the sash and go out on the grass lawn, while the mother hen was confined. From the day they were hatched the chicks received no heat except that furnished by the natural brooding of the hen. I have no record of any chick having died under this system of fresh-air handling during the season of 1915.

FEEDING OF EARLY CHICKS.

If chicks are carefully fed during the first few weeks of their life there is not much likelihood of losses, if they are the progeny of vigorous stock. The chicks in this case were given no food for the first thirty-six hours after being hatched, but they were allowed to run around in some dry clean sand. In accordance with my usual practice (I mixed my own chick feeds, consisting of equal parts of dried bread crumbs, rolled oats or oat meal, small-size cracked corn, bran and wheat. This was fed for the first two or three weeks. The smaller parts of this home-mixed feed were eaten by the chicks and the larger parts by the hens, so that nothing was wasted. At the end of three weeks the average weight of the chicks was 5¼ ounces. (See Photo No. 1.)

When the chicks were from four to six weeks old they were fed regularly four times a day, but they were not fed heavily at any time. The first thing in the morning they were given a little grain mixture in their pens, being kept confined that they should not run on the grass until it had become well dried off by the sun. On wet or stormy days the chicks were kept pretty well confined all the time, the aim being to keep them from getting damp and catching cold in their bowels. The fact that there were no losses I attribute to the care used in preventing the chicks from getting wet.

The grain mixture fed the chicks consisted of a first-class grade of commercial scratch feed. A good scratch feed contains a variety of grains, and chicks like a variety the same as human beings. To this scratch feed I added about one-third by measure of wheat, for the reason that I did not think the purchased feed contained a sufficient quantity of this valuable protein feed. For successful growth in young chicks it is important that they be supplied with mineral matter, carbohydrate, fat, and protein. A variety of feeds is an aid to the chicks in selecting for themselves what is needed for normal development.

About 9 o'clock in the morning the chicks were given a moderately wet mash, consisting of about equal parts of bread, bran, middlings, ground oats and corn, and a little

Photo No. 1, March 30, 1915, White Rock chicks three weeks old, average weight 5¼ ounces. See article "Development of White Rock Pullets."

meat meal, the whole being wet down with water or milk. This formed a nourishing mash feed which was eaten ravenously by the chicks. At noon they were given a small quantity of the grain mixture and at evening the same ration but

Photo No. 2, April 24, 1915, White Rock chicks six weeks old, average weight 14 ounces. See article "Development of White Rock Pullets."

in sufficient quantity to sustain them over night. In the early part of the season the nights are quite long, so that care was taken that the chicks did not go to roost without being well supplied with food for the last meal of the day. The result of this method of feeding was that the chicks weighed on an average of fourteen ounces when six weeks old. (See Photo No. 2.)

After the mother hens had begun to lay again and had left the chicks, they were placed all together to save time in care and feeding. They were fed regularly four times a day as previously described and were allowed a limited grass range. When three months old, the pullets were separated from the cockerels and a larger quantity of stale bread was used in their mash. In other respects the same proportions of ground feeding stuffs were used in the mash. At a little over four months of age the average weight of the pullets was 3½ pounds. (See Photo No. 3.)

Shortly after August 1st the pullets were placed in the pen they were to occupy for their Winter quarters. These had been previously thoroly cleaned and prepared for their accommodation. Each pen contains a yard space, roosting place, scratching pen, dust bath, and nesting places. The yards open into a field where the pullets were allowed to run an hour or two after their evening meal. On wet or stormy days, however, they were not allowed to run on the grass, but were kept confined to their quarters. Every precaution was taken to prevent the pullets from getting bowel trouble by getting wet and chilled. While ailments of this nature are not necessarily fatal, they have a tendency to set back the growth of the pullets and prevent their normal development for Fall and Winter egg production. And it must not be forgotten that one of the objects of determining the normal development of White Rock pullets was to find out the normal period when they begin to lay under good care and management. On September 6th the pullets were photographed again, the average weight at this time being 4¾ pounds. (See Photo No. 4.)

FALL CARE OF THE PULLETS.

I have always felt that pullets intended for Fall and Winter egg production should be well fed and have comfortable quarters. My aim was to provide for their proper nourishment, physical comfort, and cleanliness. With the pullets raised in 1915 special attention was given to these matters. As will be seen, the results were fairly early and large size eggs for pullets.

When the weather began to get cold the pullets were kept as active as possible. This was accomplished by throwing a little grain in the litter of their scratching pen two or three times a day. A good combination of grains I had found for Fall and Winter use was two parts wheat and one part each of corn, barley, oats and buckwheat. The corn may be fed cracked or whole. At first I used cracked corn which was changed to whole corn about the first of October. This was given morning and night in their litter, the pullets thus being made to scratch for the grain.

In addition to the grain the pullets were fed a substantial wet mash. I used a mixture of two parts of bran and one part each of high-grade middlings, ground corn and oats, and cut clover or alfalfa meal. To this mash mixture I added a substantial quantity of stale bread soaked in water or sour milk. Small boiled potatoes were also frequently added to the mixture. The whole was wet down to a light crumbly mass. The stale bread costs me 2½ cents a loaf at the bakery. At this price it is not an expensive feed for finishing pullets for a few weeks, if fed in judicious proportion. To the mash for the pullets there were frequently added the wastes from the table.

But feeding is by no means the whole story in the proper development of pullets. As previously stated, this was supplemented with dry and substantial quarters. It is not necessary to have expensive buildings to properly house pullets for Fall and Winter egg laying. A good poultry house is one which is free from draughts, gives plenty of light, is thoroly dry, and is well ventilated. A dark or a damp house is bad for fowls, especially for growing pullets. They are apt to catch cold, which in the Fall of the year may develop into roup. As an extra sanitary precaution, the roosting quarters were regularly cleaned. Under no circumstances at night or day were the pullets exposed to draughts. From the beginning to the end of their development there was no sign of physical ailment in any of the pullets.

I regard a well-lighted scratching pen as an important adjunct for the proper handling of growing pullets. If they have no means of exercising their scratching habits they soon lose their vigor and will not develop normally. To keep the pullets busy, especially as the colder days of Fall approach, I provided the scratching pen with two or three inches of clean litter, into which their grain was thrown from time to time. For litter I used a combination of leaves, hay and straw in about equal proportions. Any coarse material, however, will serve equally well as litter. The scratching pen was cleaned at least once a week. The fine material was used under the perches as an absorbant for the manure.

A good-sized dust-bath was also provided for the pullets. The object was to enable them to keep themselves free from lice as possible. If this pest harbors abundantly on growing pullets, it not only prevents growing pullets from developing as they ought, but it is apt to set back their laying in Fall and early Winter.

The pullets were also provided with oyster shell, grit and meat meal or scraps in simple self-feeding hoppers. These materials are especially desirable when the pullets are more or less confined as was the case with these pullets.

THE FEEDING OF GREEN STUFF.

In my judgment pullets will not develop normally unless they have a certain amount of green feed. In late Summer and early Fall these pullets were fed plenty of lawn cuttings and succulent weeds from the garden every day. Green food helps to keep growing stock in good health and, in the case of pullets nearing maturity, stimulates egg production.

As weeds and lawn cuttings began to grow scarce, the pullets were fed a small quantity of alfalfa or clover in their mash, supplemented with a small quantity of cabbage. During the late Fall they were fed some sprouted grain or some

Photo No. 3, June 24, 1915, White Rock pullets ready for penning, a little over 4 months old. Average weight 3½ pounds. See article "Development of White Rock Pullets."

other kind of green feed. For pullets beginning to lay, nothing is much better in the line of green stuff than sprouted grain. This forms a valuable and not expensive feed for pullets. Either wheat, barley, oats or rye may be used for

Photo No. 4, September 6, 1915, White Rock pullets, average weight 4¾ pounds. See article "Development of White Rock Pullets."

this purpose. Under proper conditions of temperature and moisture, the sprouting of any of these grains will soon take place. For this reason no poultryman need be without a constant supply of succulent feed for his pullets during the late Fall and Winter seasons. In view of the importance of green food for growing and laying stock, it may not be out of place to briefly describe my method of preparing sprouted grains for poultry purposes.

About half a gallon of wheat or oats is put to soak in a pail. The grain in the pail should be stirred occasionally with a stick. In two or three days the grain will be found to have germinated. The water is then poured off and the grain spread out evenly in trays not more than an inch in depth. Regular sprouting trays may be procured of dealers in poultry appliances, but anyone who is handy with tools can easily make trays for sprouting grain. For easy handling they should not be made too large. The advantage of small sprouting trays is to save space. They may be placed one above another where room is limited.

After the grain has been a day or two in the trays, a little water is applied once a day. As the shoots grow the grain will stand watering two or three times a day. Light is important for developing the chlorophyll or green coloring matter of the plants. For this reason grain should be sprouted in light rather than in darkness.

The temperature should range from 60 to 75 degrees Fahrenheit to get the best results. A cellar, if it is well lighted and has furnace heat, is an ideal place for sprouting grain for the use of developing pullets. Within a very few days the grain in the trays will be found to have sent up succulent green shoots. When these have grown to be an inch or two in height, the roots have become an intertwined mass of whitish threads which bind the grain together into a matted turf-like mass.

This sprouted grain may be fed to pullets with good results. Since the green part is mostly desired for feeding purposes, the sprouts are allowed to grow until they are three or four inches long. The growing mass, including green shoots and roots, is broken up into small pieces and the pullets eat it most ravenously. This kind of succulent feed was fed about two hours after the morning meal or at noon. I prefer oats to either wheat, barley or rye for sprouting because it is a cheaper grain, sprouts as readily, and is as nutritious as any grain.

SELECTING THE BEST PULLETS.

There were seventeen pullets raised altogether from the four hatchings. After they had been photographed and weighed on September 6th, nine of the most promising pullets were selected for special breeding purposes in the Spring, the other eight being removed to another pen. These nine selected pullets were kept in the same pen where they had been confined since they were first penned in August. The object was to prevent any possible setback in their development as a result of being moved. Experience had convinced me that it is not good to move either pullets about to lay or laying hens from one pen to another. Moving pullets has the effect of retarding egg formation and development,

and this was what I aimed to avoid in the case of these specially selected pullets.

The first two eggs were laid on October 15th. The pullets were then practically seven months old. It may be safe to assume, therefore, that from seven to seven and a half months is about the normal time when pullets of a heavy breed of fowls like the Plymouth Rocks begin to lay. The complete record of egg laying until the first dozen eggs were laid was as follows:

Eggs Laid		Eggs Laid	
October 15.....	2	October 22.....	1
" 17.....	1	" 23.....	2
" 18.....	2	" 24.....	1
" 20.....	2	" 26.....	3

These eggs were carefully laid aside for the purpose of ascertaining their weight in comparison with the weight of eggs as laid by the average farm flock in the United States. The first dozen eggs laid by these pullets weighed exactly 23½ ounces net. As published by the United States Department of Agriculture, the average weights of eggs as laid by different breeds of fowls in various parts of the country are as follows:

	Weight Per Doz.
Eggs from poor flocks of southern barn yard fowls.....	19 1-5 oz.
Eggs from the average Tennessee or Texas farm flock.....	21 1-3 oz.
Eggs from Kansas, Minnesota and Southern Illinois, representing the average for the United States....	23 oz.
Eggs from especially bred flocks in Southern Iowa.....	24 oz.

The weight of these pullets' eggs, therefore, was equal to the average weight of eggs as produced by the best farm flocks of fowls in the United States. As a matter of fact, it was barely possible to distinguish the pullets' eggs from hens' eggs as regards their size. Under a system of careful feeding, care and management, therefore, the normal development of pullets results in the production of eggs little less in size than ordinary hens' eggs. In this connection, however, as I said at the beginning of this article, it must not be forgotten that the ancestors of this pen of pullets had been bred for egg production for years, and it is possible that this might have had something to do with the size and weight of the eggs laid by these pullets.

On November 22d, when the pullets had been laying more than a month, they were again photographed and weighed. (See Photo No. 5.) At that time they had reached an average weight of 6¾ pounds exactly, which is probably half or three-quarters of a pound above the average weight of White Plymouth Rock pullets of their age.

The number of eggs laid by these nine pullets from October 15, when they began to lay, to November 28th, inclusive, was 83. From this record one would be justified in concluding that pullets, when they first begin to lay, do not lay as frequently as later in their life. It is my purpose to keep a complete record of the laying of these pullets during the Winter of 1915-16 in order to ascertain the number of eggs laid and also as a factor in determining the cost of egg production one of the most important problems now before commercial poultrymen from a strictly economic point of view.

Barred Plym. Rocks and Their Breeding

CHAPTER I. Origin. The Gradual Development of Modern Color and Barring.
Why They Throw Solid Black Feathers. *By C. H. Latham, Lancaster, Mass.*

THE PLYMOUTH ROCKS were first bred prior to 1869, and were first exhibited that year in Worcester, Mass., by Mr. Upham, who can be justly called the originator of Plymouth Rocks. Mr. Upham's son, L. J. Upham, Webster, Mass., tells that the first cross was made with a "hawk-colored" hen, so-called, mated with a Black Java Male. This hawk-colored hen being of a rather uncertain origin, but quite a good deal in type of color like the mongrel-colored Plymouth Rocks that are seen today in flocks of Mixed breeds found in farmers' yards.

She was an active business bird, a good layer, having yellow skin and legs, a type that made an excellent table fowl, and was quite popular with farmers and poultry raisers near the home of Mr. Upham.

The males from this cross came with a large per cent of them having barred plumage, but for some years some of the females would come of pure black plumage, but having very yellow skins, were splendid layers, and made the very best of table poultry. An American Dominique male was crossed with some of the females of this first cross, and the progeny of this second cross were exhibited in a trio by Mr. Upham at Worcester, and the new breed jumped at once into popularity, which they have held to the present day. This trio was sold by Mr. Upham for \$75 at the show, a very good price for those days. As soon as the boom was on—and there was a good one too—the "hen fever" ran high. Mr. Upham tells that he has known his father and some other fancier to sit up all night talking about Plymouth Rocks.

Several other strains were started at once, but all coming to Mr. Upham, for birds or eggs. In some of these strains there was introduced blood from the Dark Brahma. I. K. Felch tells of it being used. The writer was told by H. B. May, one of the first breeders to take up the Plymouth Rocks, that there was a cross of game made. Mr. Felch says this was abandoned and not used. We can know for a certainty that there were three different bloods in the make-up of the Plymouth Rocks—two of pure bred stock and one of an uncertain origin. The blood of these three ancestors has been asserting itself continuously up to the present time, both in its good qualities, and in the other qualities not desired.

Just how the earlier breeders mated and bred their birds is shrouded more or less in mystery. The early Rocks were quite a different bird in Standard description from what we have today. Referring to the first edition of the Standard of Excellence, published in 1874, we have the color of Plymouth Rocks: Male—dark or light steel gray all over, and free from splashes of red, black, or white feathers in any part of the plumage. Female—dark or steel, mottled black and white; black and white bar well defined across each feather, evenly marked all over up to bill.

Also note the color of the Dominiques for that period: light slaty blue ground shade, each feather barred or penciled across with bands of dark slaty blue, free from white, black or red feathers.

Notice that the color of the Dominique was a combination of two shades of a slate color, or slaty blue as it was called. These two shades of slate must have been quite near to each other in color, and we see these same shades today in poorly bred Barred Rocks. It seems that the female of that period showed better barring than the male, this, no doubt, coming from the fact that a male Dominique was crossed with a dark, or possibly, black female that was the progeny of the Black Java and hawk-colored hen. It seems to be a pretty well established fact that the female progeny of a mating will take more strongly of the characteristics of the plumage of the sire than of the dame.

The introduction of the Dark Brahma blood must have

improved the tendency of showing the dark and light color in bars or lines. Mr. Felch tells that the colors of the two sexes were much alike in color of breast and body, but a light shade in hackle and saddles of the males for the first fifteen years. From this, one would gather that the double mating method of breeding was not practiced during the early years of the breeding of the Plymouth Rocks; that is, the demand for the two sexes to be alike in color for the show room did not come into existence till a later period. It was some fifteen years after the introduction of the breed that the demand came for the plumage to be barred to the skin, and then the real troubles in breeding began.

The combination of bloods gave the characteristics of the breed to cause the male bird to be of a lighter shade of color than the female, and when the demand came for the two

MADISON V

The first prize Bronze Turkey cock at the Pittsburgh Exposition Show (National Bronze Turkey Club Meet), January, 1915. This fine tom was bred and exhibited by Bird Bros., Meyersdale, Pa.

sexes to be of same shade of color in the show room, the double mating method of breeding became a fixed thing in Plymouth Rocks, and to this day has been known as the "cockerel-mating" or "cockerel-bred" stock used for producing males of the proper shade of color for the show room, and the "pullet-mating" or "pullet-bred" stock for the production of females of the proper shade of color for the show room, that is so they would be of same shade as the male color.

Theoretically the method of mating to produce these birds was as follows: To produce exhibition males select a fine exhibition colored male of proper shape and other good points needed, and mate this bird with females of quite a good deal darker color, so as to offset the tendency of the male coming of a lighter color than his sire. To produce exhibition females mate a fine exhibition colored female, good in shape and other needed points, to a male of several shades lighter in color to offset the tendency of the females coming of darker shade of

color than her dam. Of course it was understood that the matings were made up of birds of same line of breeding and males from a cockerel bred line were not used on females of a pullet bred line, or vice versa. In practice this was not done, only to an extent, for if one had absolutely been obliged to use such birds, there would have been but a very limited number of birds bred, owing to the fact that the per cent of really good exhibition birds of either sex, was not at that time, and never has been, very large. And as time has gone on, more and more intricate work has had to be done to produce the "top-notchers" of the show rooms.

When the writer began breeding them thirty years ago, the blue shade of color was very much in demand, the barring being softly blended one color into the other, so that very few birds showed the barring sharply defined, and none showed it to the extent that the better birds of today have it. The color of the flights and secondaries of the wings, were termed "marbled" instead of barred, and few of them had

in color. In those days a pullet bred male that had clearly defined barring in all sections was a very rare bird, and the writer never had seen one. Among the progeny from this male was one pullet that showed the barring more sharply defined than any bird the writer had seen, and the desire was born then to breed the Rocks with sharply defined contrasting bars, birds that would show the barring plainly when viewed from a short distance. Nearly all other birds he had seen, showed the dark and light bars of the bird blending more or less one into the other.

This, of course, produced the blue shade of color that was then desired, but a very large per cent of the birds of both sexes that were good as cockerels and pullets, all went to pieces as adult birds, and the barring became broken or more blended together, and the beauty of the barring lost. The writer believes this was owing to the strong desire of all fanciers and breeders for getting cockerels and pullets of high standard requirements, instead of working to have the cock and hen the finished product. We overlooked the fact that a young bird was *still in the making*, and should not reach its best in shape and color until it was an adult bird. This particular part of the breeding will be taken up in a later article.

The things in general most desired was to get birds of typical Plymouth Rock shape, good color and barring in the plumage, combined with yellow legs and beaks—not so difficult to do in breeding a light gray bird with weak contrasting bars like the Rocks of the earlier years.

The early Rocks had 50 per cent Dominique blood, the Dominiques having yellow legs and beaks, as well as did the original dam the hawk-colored hen. The Dark Brahma cross added more dark color to the beaks, and with the Black Java blood making over 50 per cent dark beak color in the breed. When we began to acquire more contrasts in the barring, which meant a more intense color in the dark bars, showing the bars the whole length of the feathers, the art of producing fine specimens of high standard requirements became much more difficult. We must not forget that one ancestor of the Plymouth Rocks was a black plumaged bird with black legs and beak, and that the later cross of Dark Brahma had a strong tendency for same dark color. Now, if desired, practically all the characteristics of an ancestor could be bred out or eliminated, and the characteristics of another ancestor acquired. We have steadily been acquiring more and more of the Black Java and Dark Brahma blood in breeding our present day Barred Plymouth Rocks. The constant selection year after year of the intensely colored birds for our best breeders has done it. Today we have the barring sharply defined, with the dark bar a clean, intense color, that is nearly a pure black, and in the best specimens contrasting with a clean, nearly pure white ground color, or light bar, and showing bars of greater or less perfection the whole length of the feathers, and in rare specimens having the ends of the feathers a dark or black bar. With this good color and barring we naturally lose in beak color especially, and to a less extent in leg color, owing to the dark blood that is predominating. It is a rare bird indeed that is down-to-date in color and barring, that has pure yellow beak and legs, especially in the females. This dark blood also shows with increased strength in the appearance of solid black feathers in various sections of the birds and the brighter and more sharply defined we get the two contrasting colors, the more prone they are to throw these black feathers.

We are slowly evolving a process of obtaining strong contrasting colors in our barring, breeding to have each color more in itself—and less of the blending of the dark bars into the light bars. At the same time we are slowly eliminating the dark color from the beaks and legs. This is really one of the most difficult things we are doing in breeding Barred Plymouth Rocks today. The process is a slow one, and the breeder who can see a little improvement each year should have courage, for he is slowly nearing our ideal of clean, pure, intense, contrasting colors in the barring, combined with pure yellow legs and beaks.

Sex may be distinguished, microscopically, by differences in the embryo chicks, as early as the end of the first week of incubation.

A typical White Wyandotte cockerel. Bred and owned by Oscar L. Bock, Council Bluffs, Iowa.

good barred wings, and either white or slate at base of the tail feathers, in males especially, was very common. The females of the cockerel bred line were dark, rusty, dull looking birds, such as a fancier would rather no one should see. And the same can be said of the pullet bred males, they being grizzly, washed out, gray, unattractive birds, having very little well defined barring. The writer recalls a male he bought in the early years of his work in breeding Plymouth Rocks, or as they had then become named the Barred Plymouth Rocks, as the White Plymouth Rocks had then become a breed, and soon after along came the Buffs, and others, trying to get into popularity by working on the reputation of the old Plymouth Rocks. This cockerel was procured to improve the color of my exhibition females or my "pullet-bred" line of stock, which was too dull in color and needed brightening up. He had very little barring and that all showed on the ends of the feathers, his under color was white and this white showed also in the wings and tail, but he had a fine bay eye and rich yellow legs and beak. The progeny of this cross was very much improved, tho there were some females all washed out

Specialty Breeding Barred Plym. Rocks

Notes from a December Visit to Valley View Farm, the Home of E. B. Thompson's "Ringlets."

By Prince T. Woods, M. D.

FROM MUCH that we read and hear, it would appear that a good many people look upon the fancy poultry business as anything but stable and permanent. It is not uncommon to have some "wise one" tell that the fancier-breeder is here today and gone tomorrow, and that, at best, he really remains actively in the business of producing Standard-bred poultry but a few years. Now when you meet a wise saying that pretends to present an "accepted truth" that "everybody knows is so and anyone can see must be so"—it is a pretty good plan—on general principles—to suspect that it is not really truth at all. A good many popular beliefs have sprung from some statement made with much solemnity and a great deal of self assurance, by some individual who knew nothing about the real facts—and such wise sayings have become accepted as popular truths thru much repetition.

One has only to look about him, with eyes that can see and ears that can hear, to learn that our foremost fanciers of today have been in the business, most of them, for a good many years—that they have grown up with their business and that because of them and their work, Standard-bred poultry is what it is today. We do not believe that the percentage of "quitters" in the poultry business is any greater than it is in any other profession or trade.

Now, when you find a Standard-bred poultry business that was started thirty-seven years ago and that has grown steadily in size and quality ever since, until the founder is not only still working at it himself, with abundant energy and enthusiasm, but has taken his two grown sons and a nephew into that same business as part and parcel of it—you must concede that the business has both stability and permanence. It must be a worth-while business and it must be *some* business.

E. B. Thompson, of Amenia, N. Y., specialty breeder of Barred Plymouth Rocks, and whose "Ringlets," their quality and their winnings, are well known everywhere that there is interest in Standard-bred poultry, has developed just that kind of a fancy poultry business. He says he has been at it thirty-seven years. We all know how successful his birds have been, and he now has a specialty breeding farm and poultry business that not only includes his two sons and his nephew, but also gives employment to two stenographers and four men the year around and an extra man for about five months of the year. The extra man, by the way, is a crack

shot and is employed in the chick growing season to devote his time exclusively to making war on hawks, crows, weasles and other varmints that might prey upon the valuable young chickens. This last season he killed twenty or more hawks, a weasle, some crows and skunks, and it is considered that the value of the chickens saved by his work showed a satisfactory profit above the wages paid him.

Valley View Farm, which is the home of the Thompsons and the "Imperial Ringlets" contains between twenty-one and twenty-five acres, of which fully twenty acres are devoted to the Barred Rocks. In addition to the home farm there is abundant range adjoining so that the growing stock may be said to have practically free range. The whole farm is rolling land situated in hill country with slightly views and good drainage on all sides. Along one edge of the range for growing chicks flows a small brook which is available for watering the birds.

Someone has said or written that Mr. Thompson does not care for colony houses and is thru with them for housing breeding stock, on account of the extra labor called for. It certainly did not look that way at Valley View Farm on December 2d, 1915. There were considerably over 100 colony

Residence of E. B. Thompson, Amenia, N. Y.

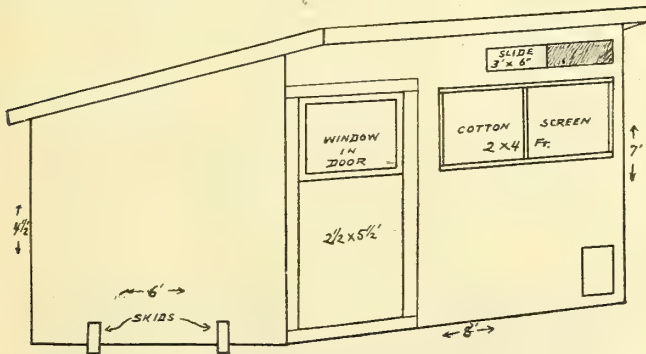

Diagram of 6x8 ft. colony house used in large numbers on plant of E. B. Thompson, Amenia, N. Y. This house is used for growing stock, surplus, and for small special mating. It is built on skids to make it easily portable, is 6 ft. wide by 8 ft. long and has a wood floor. The house is about 7 ft. high in front and about 4 1/2 ft. high at back. The door has a window. There is a 2 ft. x 4 ft. cotton screen on frame in the front, hinged at the top to swing out like an awning. Above this screen, for use when screen is closed, is a slide ventilator 6 in. high by 3 ft. long. The roof is covered with good roofing fabric and the house is painted green with yellow trimmings. There are two roosts about 8 ft. long. This makes a neat and attractive as well as useful poultry house for young or adult stock.

houses on the plant and several new ones, portable type built on skids to make moving easy, had arrived only a short time before we did. Valentine Thompson assured us that these houses are used for young stock in Fall and Winter, and in the Spring are used for small flocks of breeders. We did not count them, but would judge that the number of colony houses for surplus sales stock and for breeding birds, would run pretty close to 200, if not over that number. In addition to these large colony houses, which were about 6x8 ft., there were quite a number of 3x8 ft. colony coops and a large number of coops for hens with chicks, most of the latter being about 2 1/2 x 2 1/2 ft.

There were probably between 4,000 and 5,000 "Ringlet" Barred Rocks on the farm when we were there. We were told that the farm has a good demand for breeding stock the year around and that this season, so far, the sales of birds for exhibition and for breeding purposes have been particularly good. October and November were above the average in sales and the outlook was considered especially promising. A good many head of young and old stock are carried to take care of the sales demand, but the plant will generally Winter for breeding and show purposes about 1,000 head of adult birds and close to 2,000 head of young stock.

Each season approximately 4,000 chickens are raised, all hen-hatched and hen-brooded. These are hatched so that first lots of chicks come about the middle of March and the last hatches about July 25th. Some early eggs are sent out to be incubated artificially, but all stock grown on the home plant is natural hen-hatched and brooded.

When we were there most of the adult stock was rather ragged in moult, but, while they did not show up to best advantage, they did show the remarkably clean-cut, narrow, parallel barring that has made "Ringlets" famous, and there

The source of the water supply on E. B. Thompson's farm.

was abundant evidence that the barring went right down to the skin. We saw a good many late hatched chickens and there were a great many cockerels and pullets that were still in the "kid stage" and had not begun to ripen into maturity. Then, too, there were plenty of well-developed young specimens that were just coming into full finish and were full of promise of honors that may be won by the time this story is printed. Good sized birds, good legs, good skin, massive bodies and the whole decked off with plumage having that beautiful "zebra striping," making them a sight worth seeing. Going from flock to flock one could not help but be impressed by the family resemblance, the remarkable uniformity in type and coloring, exhibited by whole flocks, not by just a few individuals. Such uniformity can only result from many generations of careful line breeding by a specialist who has a definite ideal in view.

In his advertising E. B. Thompson says: "If you want to win and breed winners you must have my Imperial Ringlets—they are the Standard by which all other Barred Rocks are judged." Coming from a man who has just retired from the presidency of the American Poultry Association, which publishes the only official American Standard, that statement might be subject to deletion by the censor, when we get that new committee that is to censor all advertising, but we have no doubt that Mr. Thompson believes it and means it. He has been specialty breeding Barred Plymouth Rocks for so many years and, as his success proves, keeping well in advance of the fashion, that he might well be said to have been breeding ahead of the Standard rather than breeding to Standard. And we believe that most of the leading successful breeders do likewise with their favorite varieties.

The main breeding houses on Valley View Farm are all long houses, most of them of the conventional double-pitch roof type, with a muslin and glass window in each pen. The muslin windows are kept open most of the time to insure better ventilation. We noted a row of six 20x20 Woods' open-front houses, built close together step fashion to accommodate the slope of the land and making the buildings accessible as a continuous house, giving twelve large pens for breeders and surplus sales stock. Close by was another large Woods' house, just completed, 20x50 ft. with a feed room at one end. Surplus sales stock and layers are housed in this building and it is considered a very satisfactory house.

The long breeding houses accommodate forty-five pens of cockerel matings and thirty-five pens of pullet matings. Under one of the long houses is a new, large root and vegetable cellar, where are stored large quantities of mangel beets and cabbages. The cabbages are placed on shelves so that they do not touch and it is believed that this plan will keep the heads in better condition for feeding.

Two long houses are devoted exclusively to cocks and cockerels and each bird is given a good allowance of house space. It is found that by so housing the birds separately it is much easier to get them into condition and easier to hold

them in good show or shipping order. A new shipping and conditioning house 24x44 ft. and two stories high has just been completed. Here birds are cooped, groomed and prepared for shipment. The upper floor is given over to storage of shipping coops, both for domestic and foreign shipment, which are bought in carload lots. Domestic shipping coops are bought already set up, foreign shipment coops are set up on the farm. In this building there is also a ninety-gallon kettle of heavy iron over a large heater, which is used for heating drinking water in Winter. All birds are given their Winter drink luke warm. The building also has bins for storage of considerable quantities of grain.

The method of cooping and training birds on this plant differs somewhat from common practice. Long continued close cooping is not permitted. As Barred Rocks do not have to be washed the birds go into the coops for training and grooming only. Females seldom require more than a week of training, while wild cockerels sometimes require patient handling for three weeks. But the cooping is not continuous and is not overdone. The birds are moved about from time to time. Male birds are given the opportunity to run with a few females in a small pen from time to time while being trained. Feeding does not differ materially from the regular ration, except that birds that are well advanced are generally kept chiefly on hard grain, while those that are a bit slow coming into finished condition get mash, chopped meat and other dainties to help them along.

While all of Mr. Thompson's stock is closely line bred, or "pedigree-bred" considerable pains are taken to avoid over-close in-breeding. We were assured that there are four distinct family lines of each sex. These are necessary for the integrity of the strain and it is obvious that with such line-bred stock one would risk much by going outside of the strain for "new blood." In all matings care is taken to avoid similar defects on both male and female side and pains are taken to strengthen weak points on one side by strong points on the other side of the mating. In the breeding pens from four to ten females are mated to one male.

During the breeding season trap nests are used. These are considered absolutely essential to successful line breeding. In order to know how fine chicks are produced it is quite as necessary to know the dam as it is to know the sire. By use of trap nests nothing is left to guess work. E. B. Thompson knows which female and which male produce the kind of specimens he is striving for. In telling of the use of trap nests, Valentine Thompson told us of a particularly fine hen that had never given satisfactory hatchability in her eggs, much as they desired to get chicks from her. Finally they succeeded in getting from the eggs of this hen one season a number of specially fine pullets, "every one a good one." And then something happened to the hen, or as Mr. Thompson put it "like some fruit trees, she put all her life effort into one good yield of exceptionally fine fruit." The product of this hen could not have been identified and saved to the strain without trap nesting. So the verdict is that no one who desires to line breed exhibition stock, and that is the only way to breed exhibition quality, can afford to do other than pedigree breeding with the aid of trap nests.

While this plant has a good demand for breeding stock the

One of the long breeding houses on E. B. Thompson's farm.

year around and for hatching eggs for the greater part of the year, quite a considerable number of market eggs are sold in the Summer and fall and all culls, or chickens with serious defects, are sold as market poultry.

A group of colony houses on E. B. Thompson's farm.

As for volume of business in exhibition and breeding stock and hatching eggs, it must be a very considerable business in order to maintain the plant in its present prosperous condition. Certain it is that large quantities of stock and eggs are shipped from this farm all over the world. As the local liveryman put it, when driving us from the station: "They sure do ship an awful pile of eggs and chickens."

The ration for small chicks used on this plant is largely Orr's chick food, made from seasoned old grain. This is given three times a day. Sometimes a little stale bread crumbs are used to start the chicks. All chicks are reared with hens, in small colony coops, the hen being confined and the chicks allowed to run. When chicks are one month old they get a mixture of fine cracked corn, cracked wheat and hulled oats. They have the grain mixture morning and evening and a moist mash at noon. The moist mash, made just crumbly, of following proportions: Bran, 200 lbs.; middlings, ground oats and corn meal, each 100 lbs., with 15 per cent beef scraps. All feeding is by hand up to ten weeks old, after which the grain mixture is fed in troughs or open hoppers, and is as follows: Cracked corn, 100 lbs.; whole wheat, 100 lbs.; hulled oats, 50 lbs. When the chicks are from three to four months old the mixture is about as follows: Larger sized cracked corn, 100 lbs.; whole wheat, 100 lbs.; heavy clipped oats, 50 lbs.; good clean barley, 50 lbs., and a similar quantity of good Kaffir corn, if obtainable. Only good quality feeding grain is used. The corn is mostly white flint, but some yellow Argentine flint corn was used this last season.

Ration for breeding stock consists of scratch grain; 100 lbs. each of cracked corn, wheat and barley, with about 50 lbs. each of best clipped oats and good Kaffir corn. Buckwheat is used when available. Dry mash is supplied in hoppers, which are not opened until noon, and is made as follows: Bran, 200 lbs.; middlings, 100 lbs.; ground oats, 100 lbs.; alfalfa, 100 lbs., and beef scrap, 15 per cent. At moulting time or fitting time some stock slow to feather and develop is given change from this ration and may have beef scrap before them in separate hopper. Clean water, grit, shells, granulated bone and charcoal are kept always before the birds. Green food is kept growing in the runs or supplied by grass on range in Summer, and in Fall and Winter cabbages and mangel beets are the main supply. Sometimes sprouted oats are used. Cut raw meat that would pass for pretty good Hamburg steak is fed to promising specimens to hasten moult or to promote more rapid development. In fact, it is easy for any observer to note that nothing is too good for "Ringlet" birds as long as the desired results are accomplished.

Like any other well-organized business, that is also largely a mail order business, and where the majority of customers send cash with order, and do not come to see the stock before they purchase, particular attention is paid to satisfying customers. The satisfied customer is looked upon as the best advertisement and business asset, and every effort is made to make a permanent customer of him. With any live stock business there is always opportunity for a difference of opinion concerning the value of specimens between the specialist

who sells the stock and the less experienced person who is the buyer, and John Thompson, who handles a considerable part of the office business of the plant, assured us that, when such cases come up, every effort is made to satisfy the customer, even tho it might seem that he is in the wrong.

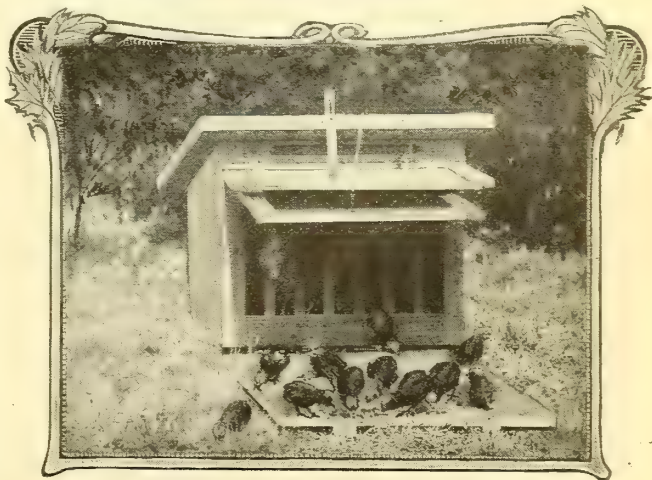

The visitor at the Thompson farm will be pretty certain to notice how the colony coops for growing stock are scattered pretty much all over the farm, some flocks even occupying the front lawn, and that one must cover a mile or more to make the round of the colony flocks at feeding time. At Valley View they consider that it is necessary to have the flocks located well apart so that the birds all get an equal chance at the range and do not bunch in large numbers. It has been found that these quality Barred Rocks do not seem inclined to wander very far afield as foragers, as do other varieties more given to the wanderlust and foraging and so do not do as well when flocks are close together. We are inclined to believe that it is not all in the lack of inclination for wide afield foraging, in these flocks; for one thing the rolling character of the land is not conducive to easy or satisfactory concentration of flocks, and then, too, the birds are so well fed and cared for that there is not a great deal of incentive to foraging. It takes a very active or a hungry bird to wander far from the home coop in search of food.

Valley View Farm grows some cabbage, beets and other crops, chiefly to keep the land sweet, as there is not sufficient acreage to grow more than a very small proportion of the supply required.

Back Lot Poultry Keeping.

I can most sincerely, from my own practical experience, advise all ladies, as well as gentlemen, who have a little room to spare in their back gardens, to set up poultry-keeping on a small scale. Many more people keep fowls than used to years ago, I know, but still not half people enough. Many who have room to spare for a family of fowls let that room remain unoccupied, either from a mistaken idea that poultry-keeping is too expensive or will entail too much trouble on them. With regard to the latter idea, it is, no doubt, a partially true one. Fowls do cause trouble, and if they are to be made to pay their way cannot fail to do so. But whatever trouble they cause they are worth it, and no undertaking or pursuit that I ever heard of flourished without some amount of trouble. In return they give fresh eggs—that you are sure of, and can offer a guest without any inward misgivings—plump chickens, a little pocket-money, and a great deal of interest.—Mrs. Eliot James.

Dr. Woods says: "Exercise and fresh air are important to the proper assimilation of food for best results from layers and breeders. Exercise prevents misappropriation of food and the laying on of too much fat. A diet that with exercise proves excellent for egg production will, if the fowl be prevented from exercising, prove fattening. If you feed a diet rich in protein, and neglect to provide for exercise, you simply pay for high priced food to produce fat which can be more cheaply produced by feeding fatty food."

The brood coop used exclusively on E. B. Thompson's farm.

Reasons Why I Keep Black Langshans

First Prize Article Winning the \$100 "Sex-Bred" Hen Offered by Herb E. Sharp, Spokane, Wash., in December American Poultry Journal for Best Langshan Article. *By J. F. Robinson, South Weymouth, Mass.*

MANY years ago, while on the hunt for a hen to set, I saw my first Black Langshan, a fine large beauty, almost ready to bring off her brood. Her owner brought her down from the attic, nest and all, for me to see. I told him, and I meant it, that she was the most beautiful fowl I had ever seen.

It was several years later, as I was walking thru the country, that I next saw any Langshans, and this time it was a lordly cock that attracted my attention. I resolved then and there that some time I would have some of them for myself.

Later the same season, I saw a small brood of little fellows and from then on "chicken" to me spelled—*L-a-n-g-s-h-a-n*. Several times during the summer I walked past this place just to get a glimpse of these little beauties, until the "fever" finally got so severe that I bought them.

There is nothing in the poultry world to me so attractive as a Black Langshan, with his lordly carriage, proud look, and beautiful glossy green-black plumage, and it was because of this attractiveness that I began to keep Langshans.

In the spring of 1909, I started my present flock with 30 eggs bought from one of the best breeders of the central west. From these 30 eggs I succeeded in raising to maturity three fine pullets and a beautiful cockerel. These four birds were wintered in a cloth-front, piano-box house, on a hill overlooking historic Dorchester Bay, and in the path of New England's famous East winds.

The first egg was laid December 1, 1909, and during the 130

The beginning of Robinson's flock of Langshans, housed in a curtain-front piano-box house during the bleak New England winter of 1909-10. From December 1, 1909, to April 8, 1910, three pullets laid 238 eggs. See first prize article "Reasons Why I Keep Black Langshans."

days of extreme winter, and cold, wet, New England early spring weather, between that date and April 8,—when I was unfortunate enough to lose one of those three pullets—they laid just 238 eggs, or an average of 59%. One of the two remaining hens laid 162 eggs and hatched and reared a flock of chicks, while the other hen laid just 203 eggs during the year. Two months during the year—March and May—this hen laid 25 eggs. She closed her year, after having gone thru her moult, with a total of 20 eggs for November.

Out of a lot of 36 chicks I raised 14 pullets and, without culling at all, these pullets, from November 1 to October 31 of the following year, averaged 165 eggs. A flock of fifty pullets and one, two, and three-year-old hens, all running together, averaged 149 eggs for the year.

At the Australian Egg Laying Contest in 1907 Langshans won first in number of eggs laid; first in winter laying and first for most eggs in two years.

At Mountain Grove, Missouri, 30 Langshans, in competition with about 600 hens of all other breeds, were second in 1912. In 1913, for the winter months, November 16 to April 1, Langshans led the field with an average of 66 eggs, the nearest competitor having 55, and they finished the year winners over all competitors with an average of 160 eggs.

The Standard weight of Langshans is, cock, 9½ lbs.; hen, 7½ lbs.; cockerel, 8 lbs.; pullet, 6½ lbs. I have found it very easy to bring my birds up to, and, in the majority of cases, over these weights. Two and three-year-old hens and nine to ten months old cockerels will generally weigh, when fat, from 8 to 10 pounds, and at the top prices, which they always command, help very materially in reducing the "high cost of living" so much complained of these days.

Strange as it may sound to some of our "light weight breed" breeders, the Langshan, altho one of the largest of fowls, is also one of the most active.—As the songbird hankereth after sunshine, so hankereth the Langshan after a place in which to dig or a field over which to roam in search of food. Here's another fine thing about this great breed; under ordinary living conditions, and ordinary methods of feeding, they do not take on excessive fat as do some of the American breeds, and this is true even of three and four-year-old hens kept for breeding purposes. The hen spoken of above as having laid 203 eggs is still, at 6 years and 9 months of age, in my yards, and altho she runs the greater part of the time with pullets and yearling hens, she has never yet been overfat, and is today as spry and hard-working as any of the young stock.

During the latter part of May, I needed a setting hen, and, finding this "old lady" on the nest, I gave her the eggs, the first time she had ever been given a rest from the laying pen. She hatched out and reared her flock, and in July, while still running with them, she laid 12 eggs, following this in August with 14 eggs. She has since passed thru her sixth moult and attended two shows, one the New York State Fair at Syracuse, and the other at Providence, R. I. I have two other hens 5½ years old that were in my first pen at Boston Show, 1910. These also, while very large hens, are still in excellent condition, and during the past season were doing their duty on the nest. This extreme hardiness is another "feather in the cap" of Langshans.

I might go on telling of the virtues of this noble breed until I had used up the whole of "the oldest poultry paper in America," but as I have about come to the end of my allotment of space I will close by saying:

Langshans are beautiful to look at; unexcelled as pets; satisfying to the palate and the purse; and the greatest chicken of them all. I began keeping Langshans because of their attractiveness; I have continued to keep them because of their proved usefulness, and I expect to continue to keep Langshans as long as the Good Lord permits me to keep any kind of fowl, because to me they, of all breeds, come the nearest to being a perfect blend of the two greatest things in the world—Beauty and Utility.

WHY I BELIEVE IN AND BREED BL. LANGSHANS

Second Prize Article Winning the \$25 Sitting of Eggs Guaranteed to Produce "Pullet-Producing" Langshans Offered in December A. P. J. by Herb E. Sharp, Spokane, Washington.

By FRANK D. HACKETT, North Wilkesboro, N. C.

I BREED Black Langshans because, from my experience with chickens as an amateur—extending over a period of twenty years—I have found no fowl that comes nearer meeting all the requirements of a general purpose fowl, suited to keeping on small town lots.

I have owned and bred Partridge Cochins, Buff Cochins, Brahmas, Wyandottes, Cornish Indian Games, Leghorns and

Black Minorcas, but in all my experience and observation none of these have the hardiness, the sound constitution, the activity as foragers, the all 'round egg producing quality, and the ideal requirements of a table bird, that the Black Langshan does.

The first great distinguishing characteristic of the Black Langshan is the fact that it is always true to type. There are no sports or shoot offs in Black Langshans—they are simply Black Langshans, and when you set Black Langshan eggs, from the hardy stock that most of them are, you can count on getting, almost always, a hatch of at least 75% to 90% of Black Langshan chickens. During the past summer I had several sittings of seventeen to eighteen eggs each that hatched every egg.

The second characteristic, that makes them the premier chicken, is their superb constitution and disease resisting powers. During all the years I have owned them I never saw one that had cholera or that was diseased, except a few chickens that last season roosted away from the perch on the damp ground and a few of them had slight colds for a few days and all of them recovered except two. No other disease has ever interfered with them, while on the other hand, on the same lot, I formerly had other breeds die like sheep with the rot.

A third characteristic, is their magnificent all the year around egg production. They are 'as layers, the equal, the year thru, of any of the "exclusive egg producing breeds" that I ever had and superior to several of them.

Fourth, as a table fowl they are unsurpassed, as broilers, fryers, roasters or boiled. Their meat is white, clean, sweet, tender, juicy and delicious. So far as cleaning is concerned they are as easy to dress as a Wyandotte or Rhode Island Red and they have very few pin feathers to mar the appearance of the skin. When dressed the skin is a beautiful white and their attractiveness is increased by the full plump breasts, large thighs and their large size, which make them an ideal table fowl. A fowl or chicken that when properly stewed, boiled, fried, broiled or roasted, will please the palate of an

epicure, the gourmand, the fastidious connoisseur, or even plain "black Sambo" who believes in getting his chicken after all others of the human race have retired to the shelter of their "virtuous couches."

A fifth characteristic, of this noble fowl and most beautiful pure breed, is its history. For over three thousand years it has been the favorite bird of the "royal mandarins" of the great empire of China as sketches on the "great Chinese wall" show, and during all these years it has maintained its distinctive type and superior characteristics, with as little deviation as has been shown by the race that first propagated it.

Those who once try Black Langshans fairly and fully, will never throw them aside for any other breed or variety.

Condition Indicated by Droppings.

Normal poultry droppings should be of sufficient consistency to hold their shape, but should not be too solid. In color they should be dark, tapering off into grayish and white. If the droppings are watery and dark with red splashes of mucus in them, feed less meat food. If the droppings are soft or pasty and yellowish or brownish, feed more meat and less starchy food. Greenish watery diarrhoea should always lead to a careful investigation of the sanitary conditions and the condition of the food and water. It is a danger signal.—Dr. Woods.

* * *

Eggs and Egg Yield.

Eggs should be regularly collected every day. The wide-awake fancier can often learn to distinguish the eggs of individual hens, and when this is possible, it is very desirable. Thereby, when it is desired to set a hen, the eggs can be retained only from the finest hens or those that are the best layers. Hens of the laying breed will lay 150 to 250 eggs per annum; common hens average about 100 eggs per head.—W. Atlee Burpee in *The Poultry Yard*, 1876.)

The Golden, Silver and White Wyandottes as produced by Ira C. Keller, Prospect, Ohio, have long been recognized as being bred very close to Standard requirements and have won their full share of blue ribbons in strong competition.

If you change your address give both your old and new address as well as your subscription number when notifying us of the change.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

HAPPY NEW YEAR, EVERYBODY!

May Peace, Prosperity and Happiness be the lot of each and every reader of AMERICAN POULTRY JOURNAL is our first 1916 wish, for the great and growing family of AMERICAN POULTRY JOURNAL Readers. Young and old, beginners and veterans, fanciers and breeders, small flock poultry keepers and big plant poultrymen, we are strong for you, and wholly with you, for all the good things that the New Year promises.

AMERICAN POULTRY JOURNAL aims to cover the whole field of poultry culture, to include all branches of this interesting, useful and valuable profession or business, and to show special favors to none. The field is broad, the work is worth while, and you will find AMERICAN POULTRY JOURNAL for 1916, as ever, full of helpful and instructive articles about poultry and all branches of poultry keeping, full of real live human interest from cover to cover—and every issue worth many times the yearly subscription price to any earnest poultry keeper.

You need us and we need YOU. Don't miss AMERICAN POULTRY JOURNAL for 1916. If your subscription expires with this issue RENEW NOW. If your subscription still has some time to run, look over our several special offers and SEND IN YOUR RENEWAL NOW and have your subscription extended from the expiration date. We are not going to tell you what the numbers for the coming year will contain. We have never been strong for "prospectuses" and announcements of articles that are stale for months before they are published. We like to give

you surprises in good, wholesome, "new laid" reading matter, delivered each month "fresh from the nest" and "with the cackle on." You know we mean it when we promise you that we will deliver big value for your subscription money in 1916, so mail your order and your dollar now.

Advertising business is good and we are getting a nice lot of new advertisers, as well as holding fast to our good old friends and customers. Advertisers know that readers really READ AMERICAN POULTRY JOURNAL. They know that readers buy AMERICAN POULTRY JOURNAL because they want to read it, advertisements and all, from cover to cover. They know that advertising space in AMERICAN POULTRY JOURNAL is a mighty good investment, because it brings prompt and fine results. AMERICAN POULTRY JOURNAL gets into the mails on time, it gets to readers on time, and, believe us, they waste no time about ripping off the wrapper and wading into the contents,—why, we begin to get inquiries from the current issue so soon after the paper gets into the mails, that we cannot help wondering how it is done, and how Uncle Sam delivers the goods so quickly. AMERICAN POULTRY JOURNAL advertising service is good service, prompt service, and result getting service. Ask the advertisers.

This January number marks our 47th birthday, we are hale, hearty, and happy, and looking forward to a season of unusual prosperity for our friends and for ourselves. We are celebrating just a little and hope you like it. We intend to keep on striving for improvement as we grow older. And, now, we think that is about enough personal talk for the present.

Readers, Advertisers, Everybody, Old Friends and New, we most sincerely wish you, one and all, a Productive, Progressive, Prosperous and HAPPY NEW YEAR. May you live long, live well, and enjoy peace and plenty, you and all of yours.

AMERICAN POULTRY JOURNAL.

WHEN SCIENTISTS disagree, where is the poor layman at? What is and what is not hereditary has been discussed, and not infrequently "cussed," for ages.

At one time we were told that certain diseases were more or less directly inherited. When that view came to be untenable we were taught that diseased parents transmitted to their

young a predisposition or tendency to the disease, a susceptible and weakened constitution. Now we are told that what is really "inherited is an unfavorable hygienic environment — an opportunity for exposure to the dangerous surroundings that had been the real menace to the victims of a previous generation, rather than disease itself."

Now it may be that the "tendency" to roup in the chickens born of roup parents, is in a large measure due to the fact that the chickens are subjected to the same unfavorable conditions and surroundings that caused roup in the parent stock. But that does not explain why chickens from eggs of roup parents, the eggs having been shipped a long distance — hatched under favorable conditions and the chicks reared in new coops on new ground — should so often develop roup at almost the same period of life that the parent stock had it, or, if they do not have actual roup, why they are so susceptible to roup colds. The experience is too common to be ignored.

This is a period when scientists try to fit most things concerning heredity into the scheme of Mendelism. With plants and some animals, particularly guinea pigs, we can very nicely follow the plan of "Mendel's law" and get our "dominants" and our "recessives", and more or less regularity in inheritance. But in some cases the principles appear to fail, and it is worth while to withhold our decision for a while until we see what another turn of Time's wheel may bring. Crossing the white and the black races does not bring definite black and white individuals, but we get a good many variations of brownness from such matings in the human family. In poultry breeding we get many remarkable variations that, apparently, will not fit into the Mendelian scheme.

We get bred-black birds that moult white. We get bred-white birds that moult in black, brown and red feathers, but generally black, as late as their third or fourth year, when previously they have

been snow white. We get red birds, that have sound undercolor, that do not develop any black in surface of back and wingbows until the second or third year and then moult in a very considerable quantity of black in these sections. In spite of evidence produced to the contrary, we do get rose comb sports from single comb Rhode Island Reds; we also get pea comb sports from such Reds and have had pea combs show up in White Plymouth Rocks that had been inbred, and breeding nothing but single combs previously, for four years. We all know that side sprigs, certain abnormalities of the body, extra toes, down between the toes, and off color in plumage, face or legs, will crop out most unexpectedly. We know these things because we have experienced them with birds we had under close observation.

We bred a pair of White Faverolles and got all pure white chicks. One of the cockerels we bred back to his dam and to one of his sisters and we got a number of white chicks, but we also got one almost solid black Faverolle pullet of good type, four partly lavender laced white pullets—one with black legs and four toes—and a cockerel that is a Faverolle, but has some feathers with as many colors as Joseph's coat. We don't know how to explain it, but we know that it is so, and if we have good luck we hope to continue inbreeding these birds and watch the results.

We know this much about heredity, that certain abnormalities are inherited with considerable regularity,—that certain family tendencies are transmitted in greater or lesser degree and that some peculiarities in shape, type or color or some abnormality like side-sprigs, thumb-marked combs, slipped-wings, etc., will crop out, from time to time, after

having, apparently, skipped a generation or two.

As a matter of fact, with all of our science, our theories and our 'sms, we are still guessing a whole lot when it comes to heredity. What we are so cock-sure of today we may have to unlearn tomorrow. There are more things in Heaven and Earth than are dreamt of in our philosophy, and we are learning very slowly. There is a whole lot of evolution and a vast legion of ancestors back of all of us and our fowls, and much as we may believe in, and clamor for, "scientific facts," it isn't a bad idea to play safe in our poultry breeding. And it is a safe play to breed only healthy vigorous fowls and to avoid breeding from fowls which have been sick.

Most people have for their chief aim in life that of making money. Money is good to have, as are also the things which money can buy. But in getting money, let us be very sure that we are not losing the myriad of goodly possessions which money cannot buy, else the mere getting of money will profit us nothing.

1916

*Nineteen-sixteen, Nineteen-sixteen,
Ring, bells! Herald, sound your horn!
Nineteen-sixteen, Nineteen-sixteen,
A Glad New Year is born.*

*Nineteen-fifteen, Goodbye, Goodbye!
To have you go we're glad,
For your history's blood-red pages
Tell of half a World gone mad.*

*Nineteen-sixteen, Welcome, New Year!
Work quickly and work well,
Bring sanity to our White Race,
Save them from the Jaws of Hell.*

*Nineteen-sixteen, Oh, Glad New Year!
May you see all warring cease,
And Comrades made of all Mankind
In a World of Lasting Peace.*

*Nineteen-sixteen, Nineteen-sixteen,
We're glad that you are here,
May you most Free and Happy be
For All Folk, far and near.*

—PRINCE T. WOODS

Danger in Kerosene.

FOR goodness sake, friend Poultryman, do *stop* using kerosene so freely and carelessly as a poultry remedy. Just because kerosene (coal oil) is cheap and usually on hand for illuminating purposes, there is no sense practicing actual cruelty to your birds by using it freely on them when the poor things are sick. We know it is often recommended for roup, colds and various other troubles, and that some people seem to be able to use it and get away with it—but if you value your poultry do not use kerosene in the drinking water, or as an external application to the soft parts, or as internal medicine.

It is a common thing to see the recommendation that, to prevent and cure colds, a thin film of kerosene should be used on the drinking water. One prescriber went so far as to say the film of kerosene should be from one-eighth to one-quarter of an inch thick on top of the drinking water. **DON'T DO IT.**

This Fall season, just passed, we have been called to see sick fowls on a number of farms, all suffering from some "strange and mysterious disease." These poor fowls had had just simple Fall colds originally, but had been tortured almost to death by careless use of kero-

sene as a "home remedy." **IT IS TIME TO STOP SUCH CRUELTY.** We found specimens blind in one or both eyes, birds with badly blistered and inflamed heads, feathers gone, skin red and covered with thick yellowish crusts. It was not the result of disease, **KEROSENE DID IT**, used on the drinking water. We found fowls with throats so inflamed that they could not swallow food—**KEROSENE AGAIN**, internally in half and full teaspoonful doses. We found fowls that had suddenly stopped laying and begun to droop; examination discovered frightful sores and blisters on breast and between thighs and body — **KEROSENE ONCE MORE**, this time used on the roosts and drop boards late in the afternoon so that the poor birds went to bed on perches *wet* with kerosene. When kerosene is used on roosts and drop boards to get rid of vermin, be sure to **USE IT IN THE EARLY MORNING** so that it has ample time to dry into the wood before roosting time. There is grave **DANGER** in the use of kerosene as a poultry remedy. There are simple remedies that are much better and **FAR MORE SAFE**. Do not be careless with kerosene. Do not be cruel enough to make your birds suffer from blistering and injury from kerosene, far more than they would from slight, easily-

cured colds. Never mind about the wonderful cures neighbor says he made with kerosene, we have seen some of neighbor's poor afflicted fowls and we have told you a part of the sickening things we saw. If you do not know what to do for a sick bird, and cannot get advice promptly from some one experienced in treating the sick, then put the bird into a clean open-front coop, feed and water it, and *let it alone*. This plan is far safer and more productive of good results than the ignorant and careless use of "home remedies."

Sex Control.

WHEN breeding poultry, can we govern or control the proportion of sex in the progeny of a given mating? For hundreds, yes thousands of years, poultrymen have believed that it could be done and the theories have been many and interesting.

Nearly every breeder has observed that some matings will throw a large proportion of one sex in the offspring. Back in 1885 we owned two Buff Cochins that threw pullets almost invariably and cockerels rarely. Though we noted the fact and called it to the attention of some fancier friends, we were too young and inexperienced then to realize the opportunity or to know how to take advantage of it.

Now comes Herb E. Sharp, of Washington, who has made a study of "sex control" in cattle and poultry breeding. He has studied the mating and inbreeding of Jersey cattle, where cows have dropped all heifer calves, or five heifers to one bull, and he has endeavored to apply such breeding to poultry. He be-

**The RED SUSSEX MAN is BUSY**

I am busy this month, judging at the following shows in January: Madison Square Garden, N. Y.; Cambridge and Lima, Ohio; then Boston, the 2nd Chicago show, Bryan, Ohio, and La Porte, Ind. I judge the last show of the season at La Porte, January 27th. **During this time I cannot write personal letters.**

Mark this date, **February 15th**, a complete mating list describing all my pens will be ready for mailing. I am going into the breeding season as strong as possible. As the show season is advancing I am getting more and more reports of list prize birds, either birds I have sold, or birds hatched from my eggs.

SWANTON, OHIO

Fashion Plate Buffs

Buy one of our \$10 or \$15 cockerels and improve your flock by the introduction of **FASHION PLATE** blood.

Buy a yearling cock bird at the same price to mate with your pullets and note the improvement in your 1916 chicks.

Pullets or hens, all raised from our trap-nested families, at \$3.00, \$4.00 or \$5.00 each—guaranteed to please or money refunded.

Eggs Eggs Eggs

Send for the new *Fashion Plate Book*; study our 30 matings, articles on trap-nesting, conditioning show birds, dry mash feeding, care of little chicks, etc. 60 pages. Free.

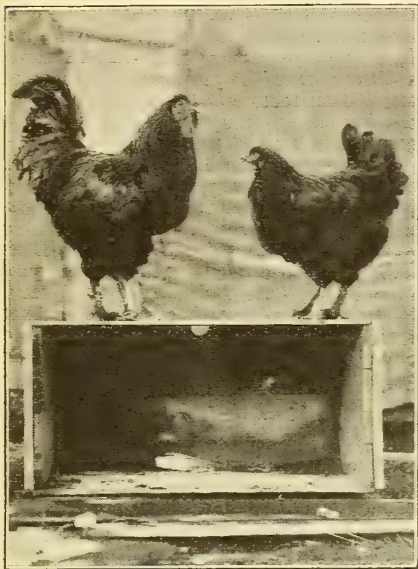

A. E. MARTZ

Buff Orpington Specialist and Judge

Box A

ARCADIA, INDIANA

lieves he has found the key to sex control in poultry. Starting with a single pair of Black Langshans, the male being the head of the first pen in Tacoma in 1911-12, this foundation pair being known as "Champ" and "One Hundred,"

Black Langshan pair that founded Herb E. Sharp's strain of "female producers," the birds that revealed "Sex Control," — the cock "Champ" and hen "One Hundred". Mr. Sharp says that this pair produced sixty chicks, all pullets but one. The prize hen and the prize eggs offered in the American Poultry Journal Black Langshan article contest are from stock line bred from this remarkable pair. See editorial.

he claims they have, in three years, given him 60 chicks *all pullets but one*. Five daughters bred back to their sire produced in one year 75 chicks, all pullets but two. This "female producing strain" has been closely and carefully inbred and contains no blood but that derived from the original pair. Mr. Sharp promises to tell the story of his work in breeding for sex control in poultry in AMERICAN POULTRY JOURNAL for 1916. He writes well and to the point and his articles are certain to be interesting and worth while. Whether you agree with Mr. Sharp's views or not, you are certain to find the details of his experience both interesting and instructive. Herewith we present a photographic view of the foundation pair of these "female producing" Black Langshans, the cock "Champ" and hen "One Hundred." The owner says that, from the mussed feathers of these birds and the pose they assumed naturally, the reader can see that they are "untouched and unretouched." We hope to print the first article on breeding for "sex control" in one of our big early Spring issues. It should be worth waiting for.

To the Beginner.

IF YOU are intending to start with poultry, NOW is a good time to get your breeding stock and to place your order for hatching eggs or day-old chicks for early Spring delivery. Get your order in early to avoid disappointment.

By all means buy the best Standard-breds you can afford. Read the adver-

tisements carefully and buy of the man who has stock bred for the purpose for which you desire to breed. It is a good plan to specialize, to breed only one variety and to try to breed that for a happy combination of Standard qualities and productive qualities in eggs and meat. If you prefer to confine your efforts to producing exhibition quality stock, by all means do so, for it affords a great deal of pleasure and interest and it can also be made to pay.

Practically all of the so-called "popular Standard breeds and varieties can be relied upon to give satisfaction in both beautiful and useful qualities, if properly bred and managed. Make your own selection, for that is the only choice that will ever satisfy you. Breed the variety that pleases you and appeals to you, and breed it to a purpose.

Don't expect too much, either when you buy or when you breed. While Standard color runs pretty fine, as a general rule, you will find that there is more or less variation in size, type and quality. You have only to visit a poultry show and look over the classes in a given variety to satisfy yourself on this point. The "blue ribbon winners" that closely approach the Standard ideal are not plentiful, are still hard to get, and still cost long prices. Uniformity is not all that could be desired, but there is improvement and advancement in most cases all along the line. Where the birds fit to win are bringing from \$50 to \$100 each, and extra good breeders—but not show birds—very nearly the same prices; you cannot expect to get a specimen that will fit full Standard ideal description for from \$3 to \$10. "It can't

Myers' Barred Plymouth Rocks

"LADY BEAUTIFUL" STRAIN, PULLET LINE EXCLUSIVELY

My winnings, year after year, at the leading shows of America, where the Barred Plymouth Rock Classes are the strongest, show conclusively the quality of my line.

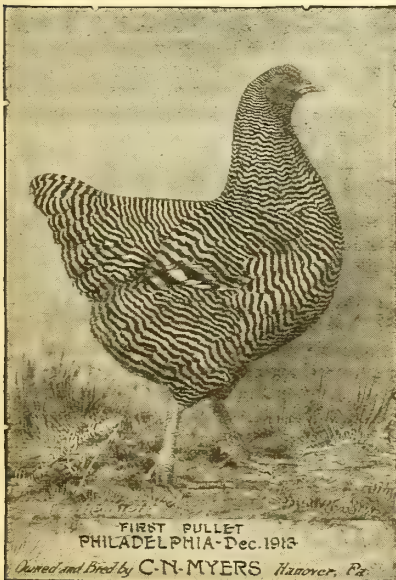

AT THE GREAT HAGERSTOWN SHOW, 1915

My winnings there for three years are history. This year my birds won: Hen, 1, 2, 3; Pullets, 1, 2; Pullet-Bred Males, 1, 2, 3, 4, 5; Championship Special Female, Etc.

C. N. MYERS - Box A - Hanover, Pa.

Winners of Five Championship Female Specials at Madison Square Garden, New York, 1914; Philadelphia, 1913-14; Hagerstown, 1914; Williamsport, 1914.

This unapproachable record stands unequalled. It was made at my last five exhibits, competing against all birds in the American Classes.

be done!" For \$10 or less, one may often get a good all-around breeding bird, but it will be deficient in some of the minor Standard requirements. You can't buy a gold dollar for a nickel.

Buy the best you can afford and rely upon the breeder to sell you stock birds properly mated to yield good results. Put it up to him and put him on honor to do this. Do not be disappointed if such a mated pen, pair or trio, fail on one side or the other to match Standard description. If they are properly mated, you will get a "mated pair" not a "matched pair." The breeder is the one to mate the birds for he knows the breeding back of them and how they may be expected to nick. You can see "show" values, but you cannot always see "breeding" values. Whatever price you pay, you should get good sound healthy vigorous stock, free from deformities and reasonably free from serious defects.

Do not expect too much from your first year's breeding and remember that good specimens, that approach closely to Standard ideals, are hard to get. If they were easy to produce and came in great numbers, the prices of such specimens would be much less and there would not be half so much pleasure in producing a "good one." There is never much interest and satisfaction in anything which comes too easy, and things easy come by are seldom lasting or worth much. There is just enough difficulty—a sufficient number of obstacles to overcome and some surprises—in the breeding of Standard-bred poultry to make it decidedly interesting and worth while.

Do not expect too much from eggs for hatching. Assuming that the experienced breeder has mated his birds to the best of his ability, there is always a chance that the mating may not nick, and that more or less of the chicks will show some evidence of a "throw back"—have characteristics of some ancestor not looked for in the mating. You simply buy the breeder's chances in those eggs and it sometimes happens that he

sells the best chicken of the season's get in the eggs. If you get one good strong chick for each two eggs set, you have no cause to complain. If you grow one or more "crackerjacks" from a single setting, you have reasons for congratulation. Don't expect too much and you will not be disappointed.

We followed up a complaint of a dissatisfied customer of one of our advertisers last season and we found that a beginner had paid \$5 for fifteen eggs, and hatched seven chicks and grew six of them. He had four pullets and two cockerels; one cockerel was only good for table purposes, but any one of the other birds was worth \$5 or more as a breeding specimen. Yet that beginner, until he was shown, was sure he had just cause for complaint. When he discovered how well he had done he was decidedly "tickled."

So buy the best you can afford. Be sure to demand sound, healthy, vigorous breeding stock. Do not expect to get too much for too little. If you think you have reason to complain take your complaint direct to the breeder from whom you bought. If you are polite and courteous, he is sure to be equally so and to try to adjust matters to your satisfaction.

Breeding Standard poultry for any special purpose, or for general purposes, is well worth while; it is pleasant, healthful, interesting work and it can be made a business with both permanency and profit. Start with good foundation stock and your future in the business is largely what you make it.

Stop the Leak!

IN NOVEMBER, while stopping over for a few hours in a big city, we visited a friend in the market who is one of the biggest buyers of live poultry in his section. We know him pretty well and he showed us a number of shipments just received from fancier-breeders whom we know and whose plants we have visited. The marketman called our attention to the birds in the crates

and said: "There is a leak that could be stopped with profit."

Of course those crates contained "fanciers' culls," but there was nothing to prevent the breeder from putting the birds in good marketable condition before shipping. They were of all ages, shapes and sizes in the same crate. It would have been easy to grade them before shipment and it would have made a difference in the price received. There are a good many grades of market poultry, but it is only the best grade that commands a good price.

The worst feature, however, was that the birds in the shipment, tho apparently healthy, were miserably thin. That was a big and expensive leak that could easily have been stopped. The marketman put those birds, graded for size, immediately into fattening crates, there to stay for a period of two to three weeks of fattening. The breeder could have done that very thing and made quite a little money by so doing. In their thin condition those birds did not bring above 10 to 12 cents per pound alive. Well fatted they would have weighed more and brought easily 17 cents per pound and possibly more alive. Money worth saving. Stop the leak!

Butter for Your Bread.

JUST to start the New Year right, altho we have had much to say on the same subject for several years, we want to talk a little more about doing and holding business.

There may have been times, in the "good old days" when the "shell game" and "bunko" flourished, that it was possible to do business with "a new sucker born every minute" and to get away with it—but that sort of thing won't work long in these enlightened days. If it works at all, the man who tries it gets a nasty fall sooner or later, and generally sooner. That often quoted rule of business: "Do to the other fellow what he would like to do to you, and do it first," is a back number and should be forgotten. It won't work.

REGALS AT BALTIMORE

FOR the past two months I have been telling you about my wonderful records at the New York State Fair and Hagerstown. This month I am privileged to tell you what some of my customers are doing.

At the Great Baltimore Show, Mr. Elwood Taylor won as follows: Cocks 1, 2, 3; Hens 1, 2, 3; Cockerels 1, 3; Pullets 1, 3, 4; Pen 1, 2. Best Display of White Wyandottes and also in American class. Another customer at Guelph, Canada's greatest show, on a small entry won 1st Cock, 2nd Hen, 5th Cockerel, 1st and 4th Pullet. Another customer won 2nd on his Cockerel at the Palace, in a class of 57 cockerels. These are only a sample of the reports I am continually receiving, many of which I am not at liberty to mention.

You Must Have the Regal Strain to Win

As layers my birds are just as famous and next month I will give Mr. M. K. Boyer's affidavit to the effect that 10 Regal pullets laid for him 1920 eggs in one year. Regal White Wyandottes stand today as the greatest known combination of beauty and utility.

3000 Cocks, Hens, Cockerels and Pullets For Sale, 3000

Special: 500 beautiful exhibition Cockerels and Pullets now ready to win the blue ribbon for you. 100 well matured Cockerels from my heavy laying Dorcas line at \$8, \$10, \$15, \$20 and \$25 each. Dorcas Pullets at \$3, \$4 and \$5 each. Breeding Pens (male and four females) at \$20, \$25, \$35 and \$50. Stay-white, vigorous utility cockerels \$3 and \$5 each.

Send one dime for the Regal Wyandotte Book, telling all about the Regal Strain. FREE—My catalogue and mating list is free if you will send me your name.

JOHN S. MARTIN

Box 51

PORT DOVER, CANADA

Modern business men are beginning to appreciate that no business has an unlimited field in which to operate. The world is getting to be a mighty small place and means of communication are far easier and widely different from conditions of a few years ago. You have to keep right on doing business with the same people or friends of the same people. The field is decidedly limited. News of how you deal with your customers travels fast and it travels far. Not only is it best to do right because it is right, but it is a wise plan to do right and it pays.

TRUTH, HONEST DEALING, COURTESY and SERVICE are recognized today as absolutely essential to the continuance of any business. Complaining customers **MUST** be satisfied. It makes no difference whether the complaint is just or not, the complaint cannot be ignored, if you are to **STAY** in business. No matter where the blame lies you must set yourself right in the mind of that dissatisfied customer as quickly as you can. If the fault was yours and his complaint just, you make a friend. Quite often it happens that the complaint is unreasonable and unjust—never mind, set it right promptly just the same. If the customer was dishonest or unreasonable with you, your courtesy and service shame him, and eventually he becomes a booster for you. Every complaining customer is an important business opportunity, it gives you a chance to make good, to make a friend, and to hold business—it often leads to new business, when you satisfy the complainant that you can be depended upon to give all customers a square deal.

Recently a big city department store started off their advertisement with the following letter in big type:

BETTER BUSINESS BUTTERS OUR BREAD.

"Standards in the conduct of business are constantly changing. Methods that were common and upheld in years gone by are no longer regarded as right and proper. The ethical standards recognized in all lines of business are being raised to higher and even higher levels.

"As the late Elbert Hubbard put it: 'There is growing up in America a religion in business. The religion is now and here. It remembers the weekday to keep it holy.'

"The Golden Rule is today a big part in business. We are doing unto others as we would like to be done by, and this for the best possible reasons—both because it is right, and because it pays."

Mr. Poultryman and Mr. General Advertiser, just read and digest that. You want "butter for your bread," we all do. You want to get new business and to hold old customers and continue to do business with them season after season. You want to succeed and to have a permanent business. The way to do it is plain and it is the right way. Get the Golden Rule into your business. Do unto others as you would like to be done by. Satisfy your customers, make friends of them, convince them that your business methods are founded on, and that they can depend upon you for **TRUTH, HONEST DEALING, COURTESY and SERVICE.**

It is good business. It means building up the business. It means success. Don't waste opportunities in 1916.

S. C. White Leghorn Breeders, Attention!

You all know what D. W. Young's White Leghorns are like. Here is your

opportunity to get Young strain blood and help boost your variety at the same time.

Dan Young is pleased with our breed article contests. He does not intend to let the procession start without having his favorites get a good position close up to the band wagon. Here is where you come in.

To the subscriber of the **AMERICAN POULTRY JOURNAL** who submits the best article on S. C. White Leghorns, how to breed them for exhibition beauty and preserve all their valuable qualities, and why they are a much to be desired variety, D. W. Young, of Monroe, N. Y., will give a splendid Young strain cockerel valued at \$50. The specimen will be of fine type, and just as good in every respect as the males he regularly furnishes to customers at that price.

The contest will be decided by the editor of **AMERICAN POULTRY JOURNAL**. All articles must be in our hands by February 1st. The winning article will appear in our March number.

Articles may contain from 800 to 1,000 words and must be written on one side of the paper only. We reserve the right to retain all articles and to publish such as we believe to be worthy of space.

Send all articles to Dr. Prince T. Woods, Lock Box 4, Silver Lake, Plymouth County, Massachusetts. Mark them "White Leghorn Contest."

Now get busy and see what you can do for the S. C. White Leghorns. Prize will be awarded and delivered in ample time for you to breed the bird this season.

Battle Royal—National Victory

a battle, which White Rock breeders, from coast to coast, have been looking for took place at the national meeting of the American White Plymouth Rock Club at the Coliseum Chicago Show. Most assuredly quality was astonishingly wonderful, but as in the past, a giant Strain crumbled before the marvelous perfection of the

Halbach Strain of White Plym. Rocks

"The Sensational Champions"

They swept all before them by taking

1st Chicago Ckl. 1914-15

1-2-3 Cock
1-2-3-5 Hen
1-2 Old Pen

Silver Cup Grand Champion Male.
Silver Cup Grand Champion Female.

More than twice as much as all other breeders put together. Truly a National Victory.

1-2-3-4-5 Pullet
2-3-4 Cockerel
1-3 Young Pen

1st Chicago Pullet. 1914-15

You should see the outstanding bargains that await your order. They are a revelation in value, in quality, in blood lines. They have sought their equals, but are far in advance. For real winners at any show in any class send your order to the undefeated champions. Make sure of winning. Get the breeding birds that will produce winners. Absolute satisfaction guaranteed. Grand Catalog, 20 cents.

H. W. HALBACH, Dept. B, R. R. No. 1 Waterford, Wisconsin

DR. WOODS' NOTES AND
COMMENTS.

HAPPY NEW YEAR!

January's here again!
With snow and sleet and thaws,
Sunshine bright, then wind and rain,
Yet, we're glad, because,
Prosperity is coming fast,
Good times for you and me.
Here's the Glad New Year at last,
May ALL most Happy be!

* * *

This is our Birthday number, AMERICAN POULTRY JOURNAL's 47th anniversary. We hope you like US as well as we like YOU. If you do, we're going to get on famously in 1916. When a poultry magazine is just forty-seven years young, we think it is a very proper time for celebration. In fact we are getting into the habit of celebrating birthdays—it appeals to us as a very excellent habit. We hope you like Volume 47, Number 1, and we are certain that all the numbers to follow are going to be as good as we know how to make them. "The proof of the pudding is in the eating," and we are entirely willing to appoint you a jury of readers and leave the verdict to you.

* * *

We hope you made a New Year's resolution to "Play the Glad Game" and that you will stick to the resolve. There are so many things to be glad about, if you only will think about it. There is nothing quite so good for the "blues" as a worth-while smile and trying to find something to feel glad about. "Just be Glad," that's the whole secret.

* * *

"Chicks raised artificially, to do well, must be raised in bright, clean quarters, fed solely on sound food, provided with plenty of fresh,

pure water; exercise both inside and outside the brooder, and receive systematic care and attention. Study your chicks; learn to know their language; watch their movements and appearance; notice how they come up for their food; look to the droppings and watch their growth."

That is good advice to follow anywhere that chickens are grown.

* * *

Poultry keeping in Gatooma, South Africa, must be some strenuous. Graham Hope, in *The South African Poultry Magazine* advises a correspondent in that section, whose poultry are pestered with fleas and ticks, as follows:

"Insect pests are the drawback of poultry farming in South Africa. I have always contended that there is more mortality in poultry due to fowl tick than all poultry diseases put together. Fleas are generally found in scratching sheds and fowl houses. To exterminate, twice a week water houses and sheds with a strong solution of Jeyes or similar disinfectant. To get the sand fleas off head and round eyes, I find carbolicised vaseline cannot be beaten. With reference to fowl tick, it is useless to go on dipping your birds; first get rid of the cause, and burn down all your infected fowl houses and build new ones on fresh ground. Before putting fowls in their new quarters dip them in a good solution of disinfectant."

It ought to be possible in that climate to do away with ordinary poultry houses and simply use open-front shelters, with petroleum oil sprayed in the poultry quarters and sprinkled on earth floors at regular periods ought to get rid of the insect pests. It works in our own Southwest.

* * *

For Thanksgiving we dressed off a number of White Plymouth Rock cockerels, seven and eight months old, that weighed from 7 to 8½ pounds each and were as plump and handsome as capons. We sold them at 25 cents a pound and

kept a couple of them for the home table in place of turkey. Really good turkeys sold in our markets at 42 cents a pound just before Thanksgiving. Yet the growers probably did not get over 20 cents a pound alive for the same birds. We found that we did not make any mistake in deciding on White Plymouth Rock cockerel as the Thanksgiving bird. Ours was tender and juicy and altogether mighty toothsome chicken.

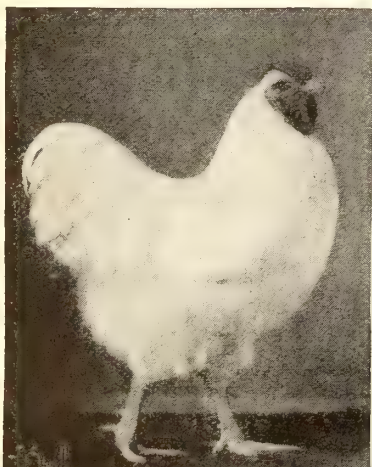

* * *

In male birds we do not, as a rule, keep the heaviest cockerels to use as breeders. Sometimes for a special reason we keep certain big heavy males, but as a rule we depend chiefly on females to get size. We like to have our young breeding males, when in good breeding condition, just about Standard weight or a little under it, and females at Standard weight or above it. We do not get them all that way, but that is what we aim for and it gives us desired results. This year we grew a nice uniform flock of White Rocks and had plenty of cockerels and pullets at seven and eight months old that were Standard weight or over. Now, while we consider our stock "utility-bred" it is, most emphatically, Standard-bred. We may not observe minor show points with much care, but we do pay a great deal of attention to breed points. A good many of the cockerels we dressed for market were quite as good in Standard points as birds we have bought at \$10 and \$15 each, yet they went for 25 cents a pound. Our requirements for birds we hold over for breeders are health, vigor, uniformity, good frame, quick growth, and good results in eggs and meat, with as much Standard beauty as we can hold on to. Everything we consider a "cull" goes to market either as dressed poultry or to be killed for table poultry. However, we do not throw out a known-to-be good breeding bird simply because of minor comb defects, off colored eyes, or a tail a bit too high, provided it sizes up well in the special qualities we insist upon.

Smith's White Leghorns

Win at the World's Fair and Chicago Coliseum, 1915! Only Eastern exhibitor of White Leghorns to get in the money at 'Frisco, November, 1915, and only breeder to win in *all* classes shown at Chicago Coliseum, December, 1915. The most consistent win of *any* exhibitor at the Coliseum. Grandest matings in the country for 1916. Catalog telling all about my Leghorns sent free. Eugene Smith, 317 Galena Blvd., Aurora, Ill.

Keeler's Vigorous Wh. Wyandottes

FASHION PLATE FOURTH
SIBED BY FASHION PLATE 3RD HEAD OF YOUNG PEN INDIANAPOLIS 1916
BRED AND OWNED BY CHAS. V. KEELER, WINAMAC, IND.

The Aristocrats of the White Wyandotte World

For 21 years my strain of White Wyandottes has been winning for me and my customers at such shows as Chicago, New York, St. Louis, New Orleans, Kansas City, Pittsburgh, Denver, etc. This is a record to be proud of and you will be getting the benefit of these 21 years of experience and breeding that are back of my birds when you purchase White Wyandottes from me. Have by far the finest and largest lot that I ever reared. Birds that will be the winners at America's best shows this fall and winter and birds that you will be proud to own.

The World's Greatest Strain

My birds not only win prizes but produce satisfactory results in filling the egg basket, laying as high as 265 eggs per year—The prize winning females are selected from among these layers.

Fine head points, wonderful size and shape, pure white, stay-white plumage, broad backs, and well spread tails combined with their wonderful laying ability, their power of reproduction and their habit of winning 1st prizes are the results of careful systematic, pedigreed line breeding. The result of my 21 years of experience I am offering to you at low prices (quality of birds and breeding considered).

2000—Birds for Sale—2000

Females, \$5.00 to \$25.00. Males, \$5.00 to \$35.00. Limited number, extra choice of the best breeding, \$50.00 each. Breeding pens \$20.00, \$25.00 and \$35.00. Show Pens \$50.00, \$75.00 and \$100.00. I have no cheap birds—nothing but the best—so please do not write for \$2.00 or \$3.00 birds.

Eggs—Eggs—Eggs—Eggs—Eggs—etc.

The pens that will produce the 1916-17 winners, mated December 15th, and after January 1st am ready to furnish you eggs from the 16 best matings of White Wyandottes in America. 1916 illustrated 64 page art catalog of America's finest White Wyandottes FREE. Send for your copy today. Eggs, \$5.00 per 15; \$9.00 per 30; \$14.00 per 50; \$25.00 per 100. Shall spare a very limited number from special matings at \$10.00 and \$15.00 per 15. State wants definitely and address.

Chas. V. Keeler, R. F. D. No. 11 Winamac, Ind.

If we were breeding to produce show specimens, which we are not, we would not overlook these defects in beauty. Where exhibition quality is the object, it is too difficult to get a specimen closely approaching the ideal to make it wise to breed birds that are lacking in these beauty points. Still we do strive to get all the beauty points we can and believe in time we shall have a very happy combination of the beautiful and the useful. Nevertheless, just because we are working for the maximum in practical or "utility" values, we do not consider that our fowls are any the less Standard-bred than those of some other breeder who is specializing along exhibition lines.

Some of our fancier friends tell us that we see health, vigor and carcass first when we look a bird over. Well, probably we do. Possibly it is a good thing too, and it might be better if more breeders were afflicted with the same failing. When all is said and the votes are counted, it is the *foundation* that counts, is it not? You cannot build anything worth while, lasting, permanent, anything that is to live and succeed, unless you have a *good foundation*. You will concede that that is true, will you not? Well then, *the carcass is the foundation of the fowl*. And furthermore, *health and constitutional vigor are the foundation of the carcass*. Once again, *the useful practical values, the "utility values" if you please, are the foundation and tap root of popularity*. Now friend breeder, you can't get away from that foundation and succeed, if you are wise you won't try to. But we do not forget, and you should not, that *beauty* also has great value, that certain *uniformity* is desirable and useful—so go to it and build all the beauty and uniformity and other desirable things you can on that *foundation*. But get a good, solid, substantial foundation first.

Ideals are very necessary and well worth striving for. Theories are very interesting, entertaining and exciting and often very useful. Facts are often dull, commonplace and anything but flattering. Facts count, and sooner or later, whether you have the desire—or the ability—to face facts, you are certain to find facts facing you. Evade and side step as you will, theorize all you please, you can't get away from facts. So, before you let your guesses

run away with you, first be sure of your facts. There is one fact that has been handed down to us from earliest times and that fact is that *a good solid, substantial foundation is absolutely essential to stability*. You cannot get away from it, and if you desire to succeed—as you should—you don't want to try to get away from it.

God and Nature are universal. Science, medicine and surgery know no national bounds, but are international. Knowledge is for all who will strive for it. Life holds faith and hope eternal. Healing is a gift that knows no state lines, no creed, no color line. Music is everywhere and for everybody. Human Nature is pretty much the same in white, black, yellow and brown races. The faith and serene belief of a little group of Christians in the dark ages, who preached and practiced "turning the other cheek" has survived, lived and thrived when all else seems to have been shattered. Nationalism, "national patriotism," competitive preparedness for war, has precipitated the greatest calamity the world has ever known—almost suicide of the great White Race and Christian Nations. Why should State and National Boundaries be necessary? Commerce is for all men, not for a single group. The world, life, love, and living, were meant for all mankind. Isn't it about time to live and think as an International World Unit, instead of small groups, cliques, states or nations? Can real, red-blooded men ask for anything greater or better than a Federation of All Humanity? Is there any greater patriotic ambition than to be a Citizen of the World? The whole world is in travail, what will be the issue? These are things that everyone is thinking about. Try to think right.

Abe Martin says: "Some folks have a way o' doin' nothin' that kin hardly be distinguished from work."

How about it? Does that comment fit you?

When you are "inspired" to show up the other fellow as a "crook," "pirate," or something else not nice, why not think a bit and decide first whether you have made similar "mistakes" and done similar things that you ought to be ashamed of? In these days of big machine guns, it doesn't look wise to do

too much shooting from behind a glass trench. No, we do not mean anyone in particular. The same boots will fit a good many feet.

JUDGE NOT."

Human Nature is a wondrous thing,
We view it every day
And poets all its praises sing
To cheer them on their way.

The man may be a sinner,
Or, mayhap, may be a saint,
Perhaps he is a "winner"
And then, perhaps he ain't.

It makes no difference who he be
Or behind what mask he hide,
If you have eyes that really see
You can find the man inside.

The egotist may have a heart,
The wise man may be weak,
The fool may often play a part
Of wisdom and not speak.

Be he sinner, saint, or villian bold
Just give him another look,
Beneath the dross there sure is gold
If you read the Human book.

In everyone there's something good,
There's worth in every mind;
Let it be fully understood
We all are Humankind,

And Human Nature always will
Be the same in every place,
So long as men and women still
Are members of the Race.

—P. T. W.

In *American Fancier* is a letter from Poultry Judge D. Lincoln Orr, in which he says in part:

"After I fill my present engagements as judge, I am going to give up judging. After careful consideration and serious thought I find it is impossible for me to live up to the law and do what I think is right. I feel as a loyal member of the A. F. A. the law should be upheld. I have not the heart to throw out what I know is the best bird in the class on account of mere trifles, but the law says, 'thou shalt.' It is not a question of what exhibitors do to their birds, as we all know the law is broken by them, but they expect judges to live up to the law. I have judged birds that were priceless as breeders, birds that were marvels, but when judged by the rules as laid down by the A. P. A. must be thrown out, and this I won't, really cannot, do; so there is no alternative for me but to give up judging and this I am going to do."

That is a pretty severe arraignment of the Standard, by a poultry judge who is conceded to know, as he says, "what constitutes a first-class breeder and show bird." But just how much does the Standard concern itself anyway with birds that are "priceless as breeders?" While we appreciate Mr. Orr's position and are pleased to note that he has the courage of his convictions, we believe

William Cook & Sons Originators of all the Orpingtons

Box A SCOTCH PLAINS NEW JERSEY

EVENTUALLY if wanting the Best Orpingtons, any variety, you will send to their **Originators**. Why not now, and avoid loss and disappointment? Our guarantee of satisfaction is backed by a reputation of 42 year's standing; this means something to you.

Lower prices and better quality than anyone else. How do we do it? By breeding thousands of birds from the best in the world, and having made the Orpingtons, we **KNOW** how to mate for the best results. This knowledge *saves you money*. Advice free.

We have won over fifteen thousand first prizes. Our birds are recognized as the finest layers in the world.

Send for our new 1916 Illustrated Catalog with history of the Orpingtons and hints on poultry keeping.

Cook's Roup and Worm powder and Laying and Condition powder, at \$1 a box are recognized as the best. Eggs for hatching ready now.

WILLIAM COOK & SONS
ORIGINATORS OF ALL THE ORPINGTONS
SCOTCH PLAINS, N. J.

he understood when he began judging that the Standard describes a fashionable ideal show specimen, and lays down the law for such, rather than for birds that are "priceless as breeders." We sympathize with you "Link," but if you let down the bars to include breeding birds in a competition for closest approach to the ideal of Standard perfection, where is it going to land you? We dislike, as much as anybody, to see good breeding birds disqualified for defects that no breeder would consider of sufficient importance to keep such birds out of the breeding pens; but just where are you going to draw the line? If we ever get a real exhibition Standard that sticks close to Nature's laws—instead of chasing after a fashionable ideal, with new whimsies every few years—the work will have to be done in a very different manner than it has been done in the past. There will have to be a lot of real work, scientific study and actual knowledge put into it. It won't do to try to make a composite picture of the ideals of a few leading breeders, and a lot of others who never bred the variety under consideration. It isn't so very long since that old print cribbed from Ludlow was abandoned as the diagram for nomenclature. Have a little patience "Link," personally we would like to see you stick to judging and "hew to the line"—the breeding line—tho the ribbons fall where they may.

* * *

The special "Dairy Show Number of Poultry (England) was just as big and interesting as if there was no war. The editor quotes the British Department of Agriculture as follows:

"In normal times there is scope for a great development of the poultry industry among farmers in this country, but at present the opportunities are much greater. Moreover, in the national interests there is urgent need for increasing the food supply by producing more eggs and poultry for home consumption and for export to Great Britain.

"English imports of eggs and poultry from foreign countries have been greatly restricted owing to the war, with the result that prices have already advanced, and will probably advance still further as the shortage becomes more pronounced.

"Irish farmers, without risk of loss, can do much towards increasing the national food supply by keeping larger flocks of poultry and by adopting better methods of management; and they are most strongly urged:—

"1. To retain as many pullets as possible this Autumn for egg production during the Winter and Spring months; and

"2. To rear chickens next season.

"It may be said that, owing to the higher cost of feeding stuffs, poultry-keeping is no longer profitable. This is not the case, as the price of eggs has risen more in proportion than the cost of feeding stuffs, and there is every indication that eggs will remain dear as long as the war continues.

"The following figures, which have been prepared from carefully kept records at the Munster Institute, Cork, regarding the relative profits from egg production in the two years 1913-14 and 1914-15 should be convincing.

"Number of hens to which the figures refer—300.

"Average cost of food per head per week (October to June)—

1913-14.....	1½d.
1914-15.....	1¾d.

"Average price per dozen received for eggs—

1913-14.....	1s. 1¾d.
1914-15.....	1s. 4¾d.

"Average cost of food to produce one dozen eggs—

1913-14.....	5¾d.
1914-15.....	*6¾d.

"Profit per dozen over cost of food—

1913-14.....	8d.
1914-15.....	10d.

"In this case all the foods were purchased, and in small quantities at a time, whereas on most farms the bulk of the poultry food should be home-grown, and the cost of feeding should be less than the figures given above."

* * *

Editorial advices from South Africa, New Zealand and Australia indicate that the export egg trade is on the mend and altogether, they seem decidedly optimistic concerning the outlook for the poultry business for 1916.

* * *

From the way things were developing in November and early December, we look for a decided improvement in business conditions. There is every indication of increased interest in Standard-bred poultry. The classes in the poultry shows have been large and of fine quality. Our correspondence during November was heavier than it has been for any one month in five years and generally a poultry editor's query mail is heavier in the Spring months. There is every indication that the poultry business in the United States and Canada is going to enjoy prosperity during the coming busy months of 1916. Get your share of it. Work for it. Be cheerful and optimistic and put plenty of "push and ambish," into your work. Don't sit down and wait for the good times by the family fireside. Keep yourself and your birds before the public. Get out and hustle for business. Don't forget that "it pays to advertise!"

* * *

One thing that impressed us while visiting poultry plants this last Fall season and that was the very considerable attention that breeders are now paying to health and vigor. They know

LATHAM'S BEAUTY AND UTILITY STRAIN Barred Rocks WIN

AT PALACE SHOW, Dec., 1915, the largest poultry show ever held in New York City, eleven out of twelve birds shown were prize winners, eight of them being blue ribbon birds, winning 1st prize pullet-bred cock, 1st and 2nd prize pullet-bred cockerels, 1st prize (Sweepstakes Champion) and 2nd prize hens, 5th prize pullet, 1st prize pullet-mated pen.

Previous Winnings of this strain at other great shows of America with other noted strains competing is 300 prizes which include 37 first prizes and 14 Sweepstakes Champion prizes.

Beauty and Utility Strain Leads Them All

FOR SALE Strong hearty breeding males of down-to-date requirements for the production of exhibition females. Pairs, trios and pens correctly mated for breeding high class exhibition females.

Eggs for Hatching, \$10 per Sitting

Catalog on application.

First Prize Speckled Sussex Hen
Chicago, December, 1915

that to be successful and continue successful they must *breed for health*. It is a subject that we have been deeply interested in and one we have preached pretty persistently about for a good many years. It has been a great pleasure to us to see and handle so many fine Standard-bred specimens that gave such satisfactory evidence of good health and sound constitutional vigor. We wish that the poultry judges at our shows would look more keenly for health points when making the awards. While to have a bird become sick at or on the way to a show is a great misfortune, it is a still greater misfortune—for everybody—to have a sick specimen come into the ribbons. A judge who cannot smell roup or who won't take the trouble to use his thumb to find a chronic nasal discharge, ought not to have any hand in placing the ribbons. Fortunately, at most big shows the management hustles any sick specimens into the basement for quarantine as quickly as possible. Much more care might be exercised, by those who furnish cooping equipment, to have the show coops properly cleansed and disinfected both before and after every show. Too many fine specimens have become sick thru exposure to the trying temperatures and drafts of the show room and cooping in contaminated coops. This matter was called to the attention of the A. P. A. in a written report presented at the 1914 convention and treating of the "Control of the Distribution of Poultry Diseases." Was anything ever done about it?

* * *

It is time now to get the breeding pens mated up. Only a short while before the eggs will be needed for hatching. Be sure to use only sound healthy, vigorous breeding birds of both sexes. Make sure that such defects as the birds possess are not the same in males and females of the same mating. Give the birds good care. Gather the eggs often and use eggs for hatching from your best breeding stock only. It costs no

SILVER LAKE, PLYMOUTH CO., MASS.

Incubator Cellar and Laying House with 3 to 4-Acre Run on a New York State Farm.

500 Hens and His Candee Incubator Give Same Profits as 35 Cows on 160 Acres

"I am still at this time tied to the dairy end of farm work as a helper, but run 500 hens every year and a 2400-egg capacity Candee Incubator.

"I have run the 500 hens since the spring of 1911 and my wife and I next June have decided to make a break away from the dairy business and run poultry exclusively, as our profits from our poultry plant have equalled my father's profits from his 35 cows and the 160-acre farm every year. My 500 layers and pullets on range every year only require 3 to 4 acres at their liberty."

J. H. McClelland, Hobart, N. Y., Nov. 2, 1915.

Mr. McClelland, a Cornell graduate, not only improved his poultry by proper incubation but he has built up a custom hatching and Baby Chick business without much, if any expense.

Candees are unchanged in principle from the first Candee and every size is a proved success.

CANDEE

INCUBATORS, BROODING SYSTEMS and COLONY BROODER

STUDY THESE FIVE FEATURES

- (1) **Exact Even Temperature All the Time.** The only large incubator with automatic thermostat regulation in each egg chamber.
- (2) **Economy of Labor and Attention.** Burns a few cents' worth of coal daily; heat regulation is entirely automatic; egg trays are not raised or lowered.
- (3) **Sectional Construction and Operation.** Each 300-egg compartment is operated independently of every other compartment. Each section has its own automatic heat regulator.
- (4) **Increasing Capacity Without Loss on Investment.** You can add more sections, without affecting the original sections. Larger heater exchanged free.
- (5) **Inexperienced Persons Can Install and Operate.** Comes all-built, no big heating pipes to run through the machine. Any handy man can set it up. Experience of present users proves that no previous knowledge of incubation is necessary. Candee Service supplies all information necessary.

Even Hot Water Heat is Healthful Heat.

Add to Your Cash Income

Start with a Candee 1200 at your home, without interfering with your present position. It requires no more attention than you would give a small pen of birds in your back yard.

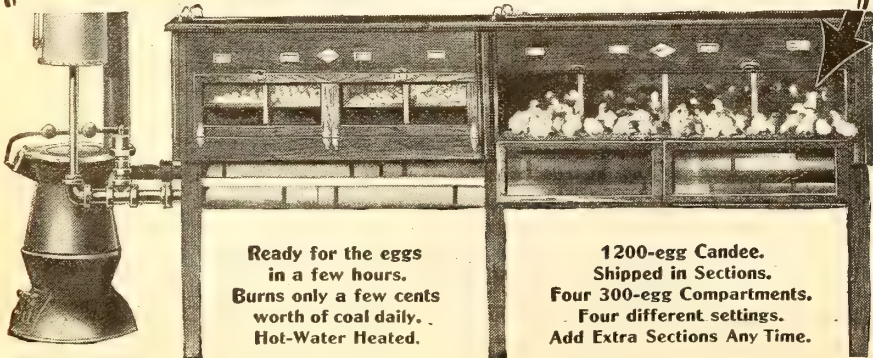

Or, start your son in business, as he can operate his Candee after school hours, earn a good income and build the foundation for success as he grows into manhood.

Big Illustrated Catalog Free

It explains Candee double heat control, sectional construction, the advantages of coal-burning heater and hot-water heat. Tells what others have done with the Candee, and gives experiences and shows pictures of plants of different operators in all parts of the country. Most wonderful Incubator Catalog published. Anyone who wants to make a success of poultry should have it.

more to grow chicks from the best stock than it does those from poorer stock; in the long run—results considered—it costs less to grow good ones.

* * *

Eggs intended for hatching should be gathered often enough to prevent their being chilled in the nests. Do not keep eggs for hatching in a warm room. Put them in a clean, cool, dry place where the temperature of the room does not go below 40 degrees or above 60 degrees F. Some folks turn eggs while keeping them for hatching. We believe that better results are obtained when the eggs are let alone and handled as little as possible. We simply put the eggs in a box or basket, place them in much the same position as they are found in the nest, and then do not disturb them until they are wanted for hatching.

* * *

Get the incubators in order, warm them up and see that they are operating properly and that the regulation is right. When getting the incubators into shape, test out a few eggs from each pen, by incubating them to make sure that fertility is all right. Don't sell hatching eggs from a mating until you know it is producing eggs that are fertile and that will hatch all right at home. If you haven't a small incubator, generally you can find a few broody hens that will run your test hatches thru for you. You can run a lot of eggs for a couple of weeks in a good incubator and then hatch the fertile ones under hens. It saves the hens' time and you don't need as many broodies.

* * *

Get the first regular full hatches started by the latter part of this month if you possibly can. February and early March chicks bring pullets that lay and pay in the Fall and cockerels that will sell for prime roosters when the market is paying from 22 to 28 cents per pound live weight. You may not get many prize winners from the early hatches but you will get a lot of prime large, husky, vigorous breeders.

* * *

If you have trouble getting fertile eggs from those loose-feathered, round-bodied Wyandottes and from full-feathered Asiatics—first make sure that the breeding birds are not overfat, then pull main tail feathers and part of fluff above and below vent on females and the fluff below the vent on males. If the birds are healthy and vigorous you can look for improvement in fertility after following this plan.

* * *

Bear in mind that all breeding fowls should be fully matured. They must have their full growth if you are to get best results. For early hatching eggs, yearling and two-year-old hens mated to husky, vigorous adult males give best results. We had just as soon have a cockerel or a cock for breeding, provided the bird is fully matured when mated. Pullets that are matured sufficiently to be Standard weight or above it and that are in full lay, will generally give good hatchable eggs. Don't try to breed immature stock, it is a waste of time.

* * *

Every male bird cannot be depended upon to properly serve the same number of females. Some males will give results with 20 to 30 females—these are exceptionally husky and vigorous ones—

others do best with from four to a dozen females and some will not give any satisfaction at all unless mated to but one or two females. Every laying hen cannot be trusted to produce fertile eggs, even tho well mated. Some are naturally sterile. The quickest way to weed out sterile hens is by use of a good trap nest.

* * *

To get best results this breeding season observe and study your fowls. Don't waste their energy or your own. Keep and breed only the result getters. If you have skill and experience you may be able to get along without trap nesting, but you will not get very far unless you study your fowls and learn which ones are giving you the best returns in eggs and good chicks.

* * *

Do not expect every egg from a special mating to turn out a "crackerjack" chick. It will not. Where special breeding and mating has been intelligently carried to the maximum degree of efficiency, the proportion of good chicks from a mating will be large, but don't expect too much.

* * *

Get your orders for hatching eggs and day-old chicks booked early this season. The demand is going to be large and if you want to get yours at a certain time, you want to get your order in as soon as possible.

Winners in Langshan Article Contest.

We offer our sincere congratulations to the breeders of the noble, lordly Black Langshan. The Langshan article contest was a great success, so many articles were received that our copy reader had to "go some" to get the awards made in time for this JOURNAL.

Articles were received from New Hampshire, Vermont, Massachusetts, Rhode Island, Maryland, Virginia, North Carolina, Ohio, Indiana and Colorado.

Our congratulations also are extended to Herb E. Sharp, Spokane, Wash., originator of the "pullet-producing strain," who so generously offered the two prizes and made the contest possible. Mr. Sharp says that the Hen No. 62, given as first prize, has a record of 22 chickens hatched from 28 of her eggs, 18 of which were pullets and 4 cockerels. If she fails to produce 75% females from all of her eggs, set as laid, he will replace her with another hen that has never yet produced a cockerel. He states that the \$25 sitting, given as second prize, should yield chickens that will produce not less than 70% females in their progeny. He is certain that he has hit upon the solution of sex control in poultry. The winners in this contest are to be congratulated on their unusual opportunity to test Mr. Sharp's pullet producers. Later on Mr. Sharp is to tell our readers more about breeding to control sex.

The \$100 hen is won by J. F. Robinson, South Weymouth, Mass., an instructor in accounting and an experienced Langshan breeder. His first prize article, which is full of human interest, will be found in this issue.

The \$25 sitting is won by Frank D. Hackett, an attorney, of North Wilkesboro, North Carolina, and a poultry breeder with 20-years experience. His second prize article, notable for merit, brevity and driving home its point, is published in this number.

We envy the winners in this contest their opportunity to test the merits of

Candee Colony Brooders at work in colony houses on the poultry plant of H. B. Grove, West Park, Ohio.

Prevents Crowding

"One look at my hearty chicks is enough to prove the superiority of the Candee Colony Brooder. It is surely the only Brooder on the market, as I have two other makes and am in a position to know.

"The Candee acts like an old hen—the chicks can run in and get warm, and then run out where the air is just what they like for exercising. It puts the heat where they need it—not all over the building.

"My Leghorn chicks under the Candee Colony Brooder weigh 1½ lbs. at 6 weeks. If I counted my time and everything, I would be money ahead if I threw out the other stoves and replaced them with Candees.

"With the Candee, there is no need to chase the chicks out of the corners, as they never crowd."

H. B. Grove, West Park, Ohio, June 1, 1915.

CANDEE

COLONY BROODER

The Candee principle of giving the chicks a warm hover, with long attached curtain, to go to when they need the heat and a room not so warm for exercising, is right and natural.

This insures raising the largest possible number of chicks to strong, heavy maturity, as Mr. Grove and thousands of other Candee users testify.

The bigness of the Candee Heater, with its larger fire pot and 12-inch grate, insures a lasting fire and heat for the babies in zero weather.

Its automatic regulator, with only one bearing, is simple in construction and operation, easy to adjust and quick in its action, maintaining the correct temperature all the time, no matter how suddenly the weather changes.

The coal magazine; guaranteed lasting all-wool curtain; high, flat, big-all-around hover for plenty of pure air; movable section of hover for getting at the heater and Money-Back Guarantee are more features of the Candee Colony Brooder that make it preferred by all critical poultry-raisers.

DON'T KILL or sell your laying hens

Use the Potter System and pick out the layers from the loafers and diseased hens. Keep only healthy laying hens. The Potter System is a secret and the greatest discovery of the century in the poultry world on the subject of Egg Producing Hens. Used by over 50,000 satisfied poultry keepers, who are saving dollars every year. Our new 100-page Potter System book, "Don't Kill the Laying Hen," contains the secret and knowledge about laying and non-laying hens. It's a revelation to poultry keepers, and you will learn how you can use the Potter System on your flock, keep less hens, get more eggs, and make more money using it. Write today, sending two red stamps to cover postage on our large catalog and circular telling all about Potter Poultry Products made for Particular Poultry People. If you are particular and want to make more money on your flock, you will write us today.

DON'T BUILD You can buy better, cheaper, more complete ready (factory) made hen-houses, roosting and nesting fixtures, coops, etc., from Potter & Co., because they buy lumber in carloads, cut and fit all parts perfectly by automatic machinery and deliver the house, coop or fixture you need in convenient sections all ready to set up.

A \$36 House

No. 5, Style "D" Potter portable open front fresh air, scratch shed house, equipped with No. 17, Style "A" 5-ft. 3-perch complete henhouse outfit for 30 hens. Price of complete house, \$36.00. Painted 2 coats.

Send for Our Big Catalog

Contains 132 pages and over 150 illustrations showing Potter portable houses, coops, henhouse outfits, feed hoppers, brooders, hovers, feeds, etc.—in fact everything the poultry keeper needs to insure the greatest success. Catalog mailed for two red stamps to cover postage. Write for it today and save money.

Potter Poultry Houses and Fixtures— Portable, Sanitary, Inexpensive

Have been on the market for over ten years and are used and recommended by thousands of poultry keepers who want the best and buy the best in poultry houses and equipment. You start right when you buy a Potter portable with complete outfit of roosts, drop board and nests. A clean, sanitary house means healthy hens and lots of eggs. The fresh air sanitary house shown here is only one of the twenty styles of houses and coops we make ranging in price from \$3.50 up and everything we make is absolutely guaranteed.

A \$6.60 Henhouse Outfit

No. 19, Style "A", 6-ft. 3-perch complete Potter henhouse outfit for 36 hens. This same style made in 12 sizes.

this "pullet producing strain"; we should like to try them out ourselves, for we believe Mr. Sharp is sincere and very much in earnest. It is an experiment in breeding that is well worth while. If he has accomplished all that he believes he has and his birds make good his claims, then we shall have to take our hats off to Herb E. Sharp as a "Bur-bank in the poultry business." Messrs. Winners, do not fail to let us have your reports after full and fair trial.

Our Regular Monthly Prize Articles.

Owing to the fact that this January issue is going to be crowded and that we have about all the work we can well handle, our regular monthly prize articles will not be published until the February issue. In that number and regularly thereafter the monthly prize articles will appear.

Announcement was made in December editorial on page 1436. We have a nice lot of articles, received since December 1st and these will be read and the prizes awarded before our February number goes to press. Prize articles intended for use in our March issue should reach us not later than January 15th. You may write on any poultry subject. Length of articles should not be less than 1,000 words nor more than 2,000 words. Write on one side of paper only. Best article each month will win a prize of \$3 and second best a prize of \$2. We reserve the right to retain all articles submitted and to publish such as we deem worthy of space. Send all articles, plainly marked, to CONTEST EDITOR, AMERICAN POULTRY JOURNAL, Lock Box 4, Silver Lake, Plymouth County, Mass.

Kate Sanborn, author of "An Abandoned Farm," says, "Down with Senator Ingall's 'one opportunity.' To the eager mind and willing hand there is a new opportunity at every turn. There is always the opportunity to try again and be successful."

NATIONAL INCUBATOR CO. Racine, Wis.

Box 13,

THE AMERICAN POULTRY ASSOCIATION MEETING.

By HARRY H. COLLIER.

THE AMERICAN POULTRY JOURNAL was the first poultry paper to reach the reader with a report of the American Poultry Association. This report was necessarily abridged, for the reason that San Francisco is a long ways from Chicago and the American gets to press in time to have its paper in the hands of its readers on the first of each month. Some December issues will carry reports of the American Poultry Association, but you will find that these papers did not reach you until along in the middle of the month.

I tried to give the essential things that were passed at the convention, but on reading my story I find that I left out some very important matters.

Grant M. Curtis offered a resolution, that was passed, reducing the Market Poultry and Egg Standard committee to three, with Robt. H. Essex, Hamilton, Ontario, Canada, chairman, and he to appoint two others. The publishing committee for the Market Standard to consist of President Richards and Mr. Essex, and two others to be selected by them. These committees to report for final action to the 1916 convention.

The Show Rule committee recommended that when a party makes charges that he must accompany the same with an affidavit, and if charges are not sustained that he lose his forfeit and then the American Poultry Association must investigate the man making charges against another member or judge. If a man is forced to make

affidavit to charges, the committee felt that he would hesitate unless he felt sure of his ground.

The Finance Committee reported that it would take \$24,137.50 to pay expenses for the ensuing year. This report was adopted.

Mr. Curtis offered a resolution to the effect that outsiders be allowed to make charges against members. These charges to receive the same attention as those made by members.

The Harrison-Pennick matter came before the convention on several occasions and, like "Banquos' Ghost," it was hard to keep down. The first report coming before the convention recommended that Mr. Harrison return to Mr. Pennick two hundred of the original claim of \$400. Mr. Curtis made a motion that the findings be returned to the committee and that the committee admit all letters and evidence in the case other than those that came from Mr. Harrison and Mr. Pennick. This admitted evidence in the shape of letters from Judge Burton and others, but the committee came back and returned the same verdict. The wording of the verdict did not satisfy Mr. Curtis and Mr. Pennick, and it was afterwards changed, but the findings in the matter were not changed one cent.

L. C. Byce offered a resolution, that was passed, that a committee be appointed to draw up some suitable plan of installing officers.

A resolution was offered by J. D. Veach, of Montana, thanking the California committee, Lyman C. Byce and Mrs. Byce, H. C. Scrutton, H. W. Krckerberg and others, who had assisted in making the convention a success. A

vote of thanks was offered and passed, thanking Vice-President A. A. Peters for his fair and impartial rulings in the convention.

Nominations for election of commissioner being in order, O. L. McCord was nominated and unanimously re-elected to that position.

D. McClaskey, Topeka, Kansas, offered the following resolution:

WHEREAS, The present system of granting judges licenses is unsatisfactory to a great majority of the judges and to officers and members of this association, be it

RESOLVED, That the Standing Revision Committee be made an examining board with full power to examine all applicants and to recommend the granting of licenses or the rejection of applications as said board may deem best to the interests of this association, the poultry fraternity and the applicants themselves; be it further

RESOLVED, That each member of the Examining Board is vested with the power to appoint at each American Poultry Association State show and any other important show, two licensed judges who have officiated at not less than three shows held under the American Poultry Association show rules during each year of the years previous to such appointment, to conduct an examination of any applicant for license who may appear before them; the judge so appointed to conduct the examination by the score card method of judging and to report in together with recommendations to the Examining Board for such action as said board may see fit to take in the interests of all parties concerned; the judges conduct-

First Pen Cockerel, Chicago, 1915
Unretouched Photo

Gridley, Ill., Jan. 9, 1915.

Dear Sir:—From eggs I bought of you I raised the 1st, 2nd and 3rd old, and 1st and 2nd pen at Bloomington, Ill. show. Also entered one old at Mt. Pleasant and won 1st and sweetestakes. At Champaign I entered a old, and won 1st and champion male.—W. H. Settle.

Lancaster, Ohio, Dec. 28, 1914.

Dear Sir:—I won 2nd and 5th on cockerels at the Ohio State Show on birds hatched from the eggs I got from you, and will want more eggs again next Spring.—Fred Stuck.

Peoria, Ill., Dec. 7, 1914.

Dear Sir:—From the setting of eggs I purchased from you last Spring I raised two choice cockerels, either one of which is worth double the price of the eggs. I showed one at the Peoria show and won 2nd prize on him.—Rud Eberhardt.

Franklin, Tenn., Jan. 5, 1915.

Dear Sir:—I got 11 chicks from the 15 eggs I purchased from you last Spring and consider this very good for the distance the eggs had to come. I think a whole lot of the birds I raised and wouldn't care to part with them.—Jesse J. Reams.

Bay City, Mich., Nov. 12, 1914.

Dear Sir:—Of eggs received from you I hatched some of the finest birds ever seen. I raised two cockerels in particular which I would not part with for less than \$50 each. One has the same type of your first Chicago cockerel 1914, and his color is nearly perfect.—E. J. Reena.

Moose Jaw, Sask., Can., Aug. 12, 1914.

Dear Sir:—Think it is about time I wrote and thanked you for the way you treated me. From the setting of eggs I hatched 12 fine chicks. Have one cockerel raised from these chicks that I consider the best bird I have ever seen and I would not take \$50 for him.—Thomas Gibbs.

Anderson, Ind., Nov. 9, 1914.

Dear Sir:—Hatched 11 chicks from the \$5.00 setting of eggs I bought of you. In September I entered 4 pullets of this lot at the Indiana State Fair, and got 1st and 2nd prize. This is sure going some. \$150.00 would not buy the birds we raised from this setting.—Parker S. Short.

GRANT M. CURTIS.

A resolution introduced by Grant M. Curtis for Harry H. Collier, "That there should be a more general use of the score card in poultry shows." This was unanimously adopted.

The Executive Committee elected U. R. Fishel, treasurer.

The new Revision Committee consists of Grant M. Curtis, E. E. Richards, Arthur C. Smith, W. S. Russell and Professor W. R. Grahams.

Nashville, Tennessee, New Orleans, Louisiana, Cincinnati, Cleveland, Ohio, sent in letters inviting the American Poultry Association to meet in those cities in 1916. F. C. Stier made a strong plea for Cleveland.

Latest Book Profitable Poultry. Finest pictures and beautiful color plates. 20 pretty instructions how to breed, hatch, feed by improved methods, describes our busy Poultry Farm with 53 pure-bred varieties, including Runner Ducks. Lowest price list on fowls, eggs, incubators, sprouters, etc. This great 50c book mailed for only 5 cents. Berry's Poultry Farm, Box 115, Clarinda, Iowa

LEE'S LICE KILLER AND GERMOZONE

are essentials to success with poultry. The former is simply sprayed or painted on roosts and kills all insects there as well as lice on the

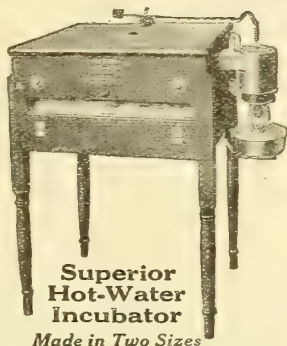

bodies of the chickens roosting over it, scaly leg mites, etc. No handling, dusting, dipping or greasing. Germozone is given in the drinking water. It purifies the water and vessels. It prevents contagion from one to the others. It counteracts musty or spoiled food. It prevents and relieves bowel trouble. It is a ready remedy for roup, colds, swelled head, canker or skin disease. Conveniently obtainable at most every city or town.

Start Your Hatches Early

EARLY-hatched chicks are worth more than late ones. Whether you wish to sell day-old chicks, raise broilers or roasters, or produce eggs, your **profits** for the year are going to depend largely on getting your chicks out early in the season—early enough to get into market ahead of your competitors—early enough for the pullets to develop and begin laying in the fall and lay steadily through the winter—when prices are highest and profits largest.

You Can Depend on Cyphers-Built Incubators

They are indispensable for early hatching. No matter how early you start, *you can rely on Cyphers-Built Incubators.* Are equipped to furnish ample heat in the coldest weather. They are Self-Regulating, Self-Ventilating, Non-Moisture—in fact, are practically **AUTOMATIC**; and they hatch the maximum number of chicks from the eggs set—*strong, sturdy, healthy chicks that live and grow.*

Take No Chances

with inferior equipment. Cyphers-built incubators are standard hatches the world over. Whatever style of incubator you prefer—whether hot-air or hot-water heated—there is a Cyphers-built machine in a size to suit your needs. Our facilities are unequalled. Cyphers Incubators are backed by 20 years' experience and every machine is *guaranteed to give satisfaction—guaranteed to you personally.*

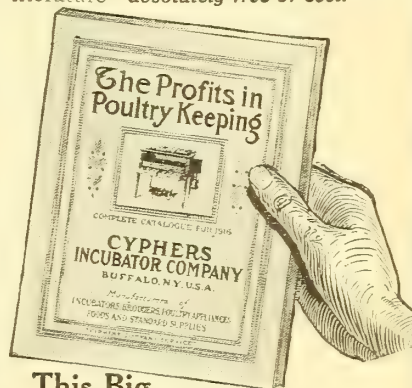

Mammoth Incubators

Cyphers Semi-Mammoths for 1,200 to 1,600 eggs, and Cyphers Mammoths for 4,000 eggs and up, are built in sections on the same principle and with the same high-grade materials that made the Standard Cyphers famous. Illustrated Circular, free.

"Cyphers Company Service"

Whatever your poultry problems may be, our "Service Department" will give you the advice or information

you need, in a *personal letter*—free of cost to you. *Don't hesitate to write us.* If you do not now have our Library of Free Booklets and Bulletins, covering all the difficult subjects of poultry work, write and learn how you can get this practical, up-to-date poultry literature—*absolutely free of cost.*

This Big 1916 Year-Book Free

This valuable book is full of practical information to all poultry keepers. Contains description and prices of our complete line of Incubators, Brooders, Foods, Laboratory Products and Poultry Supplies. Describes "Cyphers Service," including our Complete Library of Books and Bulletins, and tells how you can get them *without cost.*

Write today for YOUR Free Copy of this big, complete, illustrated Guide for Poultry Raisers. 172 pages, 7½x10 inches. *Not a dull page in it.*

All prices herewith apply east of Rocky Mountains, north of Texas and south of the Canadian line. In these high freight territories prices are slightly higher.

WHY KEEP ORPINGTONS?

By PERCY A. COOK, Scotch Plains, N. J.

THIS question is often asked by persons who are contemplating keeping chickens for the first time, and also by persons keeping birds, but looking for a breed better than they are handling. Now it is natural each one boosts the particular breed that they are keeping, usually to the detriment of the others, and in my case it is still more feasible that I should boost the Orpingtons, as my father was the originator of all of them. But my little boost would not make them as popular as they are today. Merit is the key to Orpington popularity. Now why should you keep Orpingtons? The reasons are legion, and I will mention a few. First of all to a beginner or to one that is already in the poultry business supplying eggs and birds for breeding purposes, the Orpington appeals strongly because of their selling value. It is a recognized fact

that the average Orpington costs more than other breeds of the same quality, and that the highest grade Orpington brings a higher price than the same grade in other breeds. It takes less cost in advertising to sell an Orpington. One must remember that there are too few Orpingtons and breeders in this country to supply the demand for them, and that the demand for good birds is larger than the supply. They are handsome and graceful in appearance. Are very tame, four foot wire is usually high enough to keep them in. It adds much to one's pleasure in raising and caring for birds that are docile, and one does not have to take a shotgun along to catch one. There is a tremendous demand for the Orpington among the wealthy, owning country estates, because they can have a good looking bird with absolutely the finest utility qualities.

Now to the persons keeping birds solely for utility purposes. This is where the Orpington steps in the front rank more than ever. I predicted eleven

years ago that before many years there would be more Orpingtons exhibited at the large shows than other breeds. The prediction came true after five years, and I now predict that the Orpington in a few years will supersede the Leghorn on the large egg and broiler farms. In every case where these farms have tried the Orpingtons that have retained them and disposed of their former birds, and it is only because the owners of such plants are not aware of the all-around qualities of the Orpington that they are not using them now.

Ever since I have been over here, over eleven years, I have been working on strains of Orpingtons that will be used on these large egg plants, and I have been more than successful. Several years ago I had orders for several thousand layers for these large plants, but was not then in a position to supply them with the right birds and the right prices. I have numerous laying records of pens and individuals. One White Orpington pullet starting laying at five

Fishel's Wh. Wyandottes Conquer the World

At the Panama-Pacific World's Fair

Twenty-five per cent of all prizes offered on White Wyandottes were won by one strain alone

**The
World's Best**

Fishel, on a White Wyandotte is the sterling mark of White Wyandotte quality. The genuine Fishels cost no more than others.

IS THIS NOT CONVINCING PROOF

Considered with the fact that for years they have been out-classing all rivals wherever shown, that Fishel's blood lines are right? Fishel's World's Best Strain is the product of a lifetime devoted to the perfecting of this most beautiful and profitable of all breeds of poultry.

THE WHITE WYANDOTTES

Our stock is all grown on free range, where every individual bird has room to roam over large fields and pick up nature's food, thus insuring a vigor never found in birds reared in enclosed pens. We grow these beautiful and profitable fowls by the thousand and devote our entire time to this work. We can supply you every want, be it an individual show specimen to fill your weak place or an entire show string, or a breeding pen, and our prices are very reasonable, quality and established blood lines considered.

3500 Birds for Sale, 3500. Eggs for Hatching and Baby Chicks.

Our winners at the World's Fair, as well as the winners at the Indiana, Kentucky, and Illinois State Fair, together with the great St. Louis Fair, will make up our breeding yards this season. Send for illustrated catalog, a book full of valuable information gained from thirty-four years of actual experience in the fancy poultry business.

J. C. FISHEL & SON

Box J

HOPE, INDIANA

months and one day old, and laid from that day to twelve months 208 eggs; the next year she laid 191, the next year, her third laying season, she laid 198, and the fourth year 157 eggs. In another case a hen laid 140 eggs in her seventh year. Many utility breeders only keep their layers one season, and sometimes two years, a really good layer is good for three at least. I have a Buff Orpington that laid 201 eggs the third year. Then the Orpington when well raised will lay at five months old and often before. Some may say, "What do you call well raised?" My way of well raising is feeding first thing in the morning a hot wet mash, comprised of Quaker oats, stale bread, corn meal, bran and middlings, this is mixed with the gravy from boiled beef scrap, or better still, with meat and bones boiled and the scraps of meat mixed in with the gravy. Then a feed about two hours afterwards of hulled oats. I forgot to mention a little salt is put into the mash, and once a month Epsom salts are mixed in the water that the mash is mixed with, then every bird gets an equal proportion. Then about two to three hours afterwards some good mixed grain feed like Chicgrain.

Chicks are fed about every three hours. Cracked wheat is fed and cracked corn for some meals. Am very keen on hulled oats for chicks. Fresh lawn grass is fed every day and when this is not available the tops of sprouted oats, but never more than three cuttings from the same roots as they get too tough. Drinking water should be kept out of the sun and shade provided for the chicks.

I mention our way of feeding in case any of our readers cannot get their birds too lay as early as they should. If you keep Orpingtons and they are not inbred and are from a good laying strain they will average their first eggs at five months old, which is two months younger than most other breeds begin. This year the chicks from my special laying strains I spoke of before that I had been creating, started to lay at four months and one day old and averaged laying at four months and a half old, and have laid all thru this Fall and early Winter when eggs were so scarce. This saving over two months in the matter of getting eggs is a very valuable one to a utility plant, it simply means two months or more of clear profit. For broilers they are ideal—two and a half pounds at two months old and often more, another saving of three weeks or more, roasters at six months old weighing from seven to eight and a half pounds at 25 to 30 cents a pound is a good paying proposition, and anyone who ever tastes an Orpington wants nothing else, as the meat is fine grained, tender and juicy. They are the favorite fowl of the epicure, and at many high-class restaurants "Orpington" is used to designate a special kind of fowl that is served at an extra price. They make good mothers, and are immune to climatic changes. An Arctic or equatorial climate makes no difference to them. They lay in the Fall and Winter when eggs are scarce and worth double the price of Summer eggs.

The Orpingtons have become popular on their own merits, and the fact that twelve years ago they were almost unknown over here, and that today they are leaders, prove they have merits, much more than anything I might say about them. I make a special point of having my show birds good layers. In

fact, they have to have usefulness as well as good looks, otherwise I have not any use for them, by adhering to this for a number of years I know that all my birds will make a good record. It would be impossible to find a more hardy bird, but stay away from inbreeding. I have five separate strains of my own in each variety to mate across for fresh blood. Mortality in rearing is 2 per cent per year with us, and should not be more than that with anyone else with good stock birds. Which Orpington shall I chose is the question asked after deciding to keep

Orpingtons. I always recommend the person to take their favorite color.

S. C. ANCONAS

THE SURE-WIN STRAIN

At Coliseum Show, Chicago, in 1913 and 1914, they won 7 firsts, 2 seconds, 2 thirds and a 4th on 13 entries. At State Fair, Milwaukee, Wis., 1915, they won 1st and 2nd cockerel; 1st, 3rd and 4th pullet; 1st and 4th hen, and 2nd cock on 9 entries.

Excellent show birds and breeding stock for sale. Satisfaction guaranteed.

"Peerless-66" is the Most Remarkable Hatcher in the World. —H. M. SHEER

Over 50 Improvements for 1916

FRIENDS, whether you are buying your first machine or figuring on an addition to your equipment—or replacing of old machines, the one hatcher in the world for you is the 1916 Peerless-66. It is pre-eminently the incubator for everybody.

For 1916 I have introduced over 50 improvements. And that, mind you, in a hatcher that had already set a world's record for results. Now, the 1916 Peerless-66, delivered to your home for \$6.60, stands absolutely as the only practical, all-metal, fireproof, everlasting machine produced. It is the only machine of its size with a perfect heating and heat distributing system. It is the only incubator ever produced alike adapted to the largest poultry raiser and beginner as well. Tens of thousands of users have

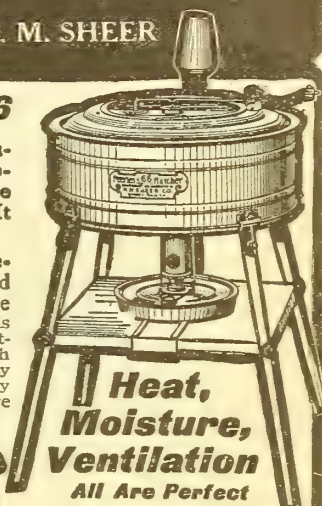

Proven Peerless Principles Perfect

They have proven that this hatcher, all metal, round like a nest, built on the famous Sheer Unit System, is just the right size to give the greatest efficiency. It is the right size to give the greatest economy. It will last for years. They have proven this by the profits this hatcher has put in their pockets. That's why J. H. of Georgia, reports:

97% Hatches

That's why Mrs. J. D. of Mo. reports 51 chicks from 53 eggs. That's why L. M. F. of Ill. says his poorest hatch was 46 chicks out of 50 eggs, and his best 50 chicks out of 51 eggs, this last record with the new Peerless-66. There are thousands more. Let me send you the names of users to convince you that the Peerless-66 is right in price, results and satisfaction.

\$6.60
East of Rockies
DELIVERED

Heat, Moisture, Ventilation

All Are Perfect

all working together as a self-regulating unit. The machine is equipped throughout with the famous Sheer Fixtures. The wonderful Sheer Water Thermostat Regulator automatically controls heat, regulates moisture and ventilation. Overheating is impossible. The heating plant is a marvel. Simple, positive, unailing.

Guaranteed

We give the broadest and most liberal honest guarantee ever given on a hatcher. Guaranteed to hatch every hatchable egg.

Hot Air or Hot Water

We supply the PEERLESS-66 with either hot air or hot water heat, as you wish, for 1916 at the same price. Never before has such an offer as this been made. We recommend the hot air however, as absolutely efficient as any hot water machine.

No Freight to Pay The Marvelous Price of the Peerless-66 for 1916 is \$6.60. Delivered anywhere East of the Rocky Mountains. Pacific Coast price, \$7.00, delivered.

Send for Book and Record of Results which tells facts about the Peerless-66 which we have not space for here. Send for it today—free—or better yet, send us your order now.

Peerless Brooders

are as wonderful as Peerless incubators in efficiency, in economy and in rearing strong chicks. Round like the hatcher, 66-chick capacity, all-metal. Simple heating

system, hot water run through coils at top, insures even heat all through brooder all the time; heat regulator outside, instantly accessible, cannot overheat, injury to chicks impossible. A more efficient or economical brooder is impossible. Send for additional facts.

Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

A brooder adapted to safely mother a large number of baby chicks invented by Clement V. Hill, Trenton, N. J., employs a coal stove with a specially devised smoke discharge flue into which the escaping gas is directly conducted. It prevents the killing of any chicks in the brooder thru the escape of coal gas, which has been one of the principal ob-

Brooder, patented November 23, 1915, by Clement V. Hill, Trenton, N. J. No. 1,161,672.

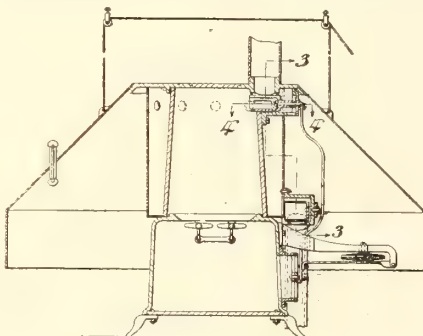

jections to the use of the stove for brooders. Patent No. 1,161,672.

A colony brooder constructed by John F. MacKay, Bordentown, N. J., successfully cares for a big number of chicks. A novel feature of the device is the rotary damper by which the temperature is regulated. The brooder consists of a heater, a surrounding hood, a smoke flue damper in the form of a slotted sleeve, a check draft damper, a lower

rotary damper and a rod that connects these two dampers and operates them in unison. The rod is, of course, controlled by a suitable thermostat. The check draft damper is a rotary disk attached to and operated with the smoke flue damper. Patent No. 1,161,495.

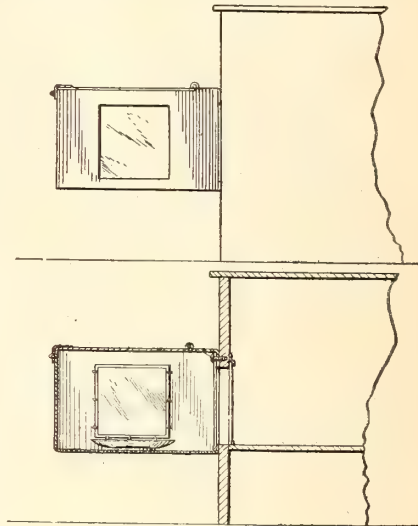

John E. Rohan, Racine, Wis., has invented an adjustable thermometer holder for incubators which holds the thermometer in an elevated position where it can be readily seen. Patent No. 1,162,653.

A drinking attachment for brooders has been invented by Clarence W. Smith,

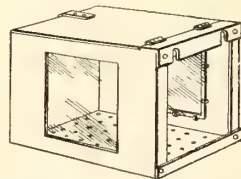

A Colony Brooder, patented November 23, 1915, by John F. MacKay, Bordentown, N. J. No. 1,161,495.

Rome, Me. Its main object is to place the water tray in that position where the chicks cannot scratch litter into it. Patent No. 1,159,540.

A drinking attachment for brooders, patented November 9, 1915, by C. W. Smith, Rome, Me. No. 1,159,540.

A hen's nest, the joint invention of Alexander Bradley and Frederick E. Elliot, Merritton, Ontario, Canada, has been acquired by the Paradise Brooder Company, a New York Corporation. The nest is of the trap variety for seg-

RANCHO DEL MARTINOS

MRS. E. B. MARTIN - DOWNEY, CALIFORNIA

regating layers from non-layers. It also has means for applying a marker to a hen at a point between the entrance door and the exit door, so as to readily distinguish the productive biddy. It is unique in having a compartment that traps a given number of eggs and then by the action of a cam attached to the egg compartment, tilts a lever that causes the entrance door to the nest to close and automatically lock. The poultryman is thus notified that his search for eggs will not be a disappointing one. Patent No. 1,160,250.

Aaron B. Moe, Chicago, Ill., has patented a new poultry trap nest, the rights in which have been assigned to Otis & Moe Manufacturing Company, of

Trap Nest, patented November 30, 1915, by Aaron B. Moe, Chicago, Ill. No. 1,162,381.

Chicago. It is distinguished mainly by the simplicity of its mechanical construction. A U-shaped guard or door to the nest is normally supported in open position by a depending latch of peculiar shape. The trap or U-shaped door is sprung into closed position by the hen brushing against it as she enters the nest. It does not automatically reset. Patent No. 1,162,381.

An automatic hen-marker, invented by Robert M. Wining, Cartersville, Ill., has a valve controlled container for

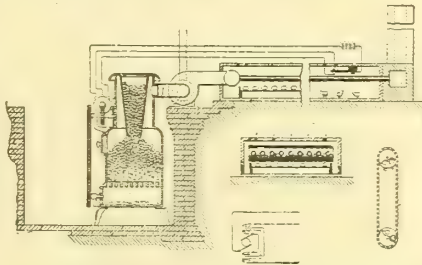

paint, dye, or ink to mark the hen as she enters the nest. A tilting floor is provided on the bottom of the nest and this floor is operatively connected by a rod with the valve, to cause the few drops of marking fluid required to drop upon the back of the hen after she has laid and is leaving the nest. Patent No. 1,161,569.

Frank W. Schroeder, Bemidji, Minn., has invented a new egg-tester, into which a tray of eggs may be placed, and an electric light switched on automatically by the insertion of the egg tray, and the freshness of the entire dozen determined at a glance thru the sight opening in the hood. Patent No. 1,161,793.

Collapsible poultry coops are the subjects of recent patents. That devised by John C. Bledsoe, Cleburne, Kas. (No. 1,161,108), has sides of wire netting. That devised by Robert A. Vivins, Danville, Va. (No. 1,162,971), has sides made of runs or rods but does not use any wire netting. Both can be collapsed into compact form when they are to be returned in an empty condition to the shipper.

An incubator of the hot-air type devised by Sylvanus S. Van Keuren, Aberdeen, S. D., has the heating pipe, which is of U-shape, disposed between two incubating chambers so as to heat both. Patent No. 1,160,793.

A "Poultry Producing Apparatus," devised by Clyde J. Coleman, 203 W. 170th St., New York City, employs an electric motor controlled by a three wire circuit in which is included a thermostat. The motor operates a blower for forcing a mixture of heated air and fresh cold air thru the heating pipes extending around the incubating chamber. The invention is designed for incubation on a large scale. It can also be used as a brooder. Patent No. 1,158,447.

Poultry Producing Apparatus, patented November 2, 1915, by Clyde J. Coleman, 203 W. 170th St., New York City. No. 1,158,447.

A broad mechanical patent has just been granted the Otis & Moe Manufacturing Company, 1111 Washington Blvd., Chicago, on their Star Jar Fountain, thus protecting them on manufacturing this most original and useful little de-

vice. It is stamped out of one piece of non-rusting metal, therefore has no parts to become unsoldered, and renders leaking impossible. It measures 6½ inches in extreme diameter and weights only 3 ounces. The manufacturers claim it to be the most simple, practicable and durable mason jar fountain on the market. It can be used for feed as well as water.

Hatch Chicks The Modern Way

Hatch 'em by electricity

This energizing force enables you to hatch chicks with but a fraction of the labor and risk involved in operating other machines.

The control of heat, moisture and ventilation is absolutely dependable. No guessing, no watching, no filling of lamps and trimming of wicks. The operation is perfect and insures a strong, vigorous chick from every hatchable egg.

Lo-Glo Electric Incubators

Make the hatching of chicks a real pleasure. These perfect machines are all metal, fire-proof, odorless, sweet and sanitary. Handsomely finished and may be operated in any room, store or office. Many users place them in the parlor or dining room. They're simple, practical and efficient. Sizes from 50 to 400 eggs.

Successful, no worry, hatching insured by doing it electrically. Fully explained in our booklet.

Lo-Glo Hovers successfully carry on the splendid development of chicks started in the right way by our incubators. Sizes 50 chicks and up. Write for free booklet J.

REQUIREMENTS FOR A GENERAL PURPOSE FOWL—WHAT BREED FILLS THEM BEST?

By O. W. ALDRICH, Columbus, Ohio.

ONE asks, "Why do you not use the phrase, 'Utility Fowl'?" Because this phrase is used in many different senses. Any bird is a utility or useful bird, if it will furnish a little meat and if a female will lay some eggs, so you see there are degrees in utility and the word is frequently used to signify a bird not up to the standard of exhibition birds, but worth something to one who requires little and only wishes to pay little, but is led to expect, by glowing advertisements, that he will get greater value for his money from the advertisers than if he was dealing with a breed of Standard fowls. As to the probability of his doing so, we leave it to the readers to judge.

What is meant by a general purpose fowl? A bird which will suit the greatest number of persons who breed either for their own use, for market purposes or as fanciers.

We say the greatest number, for we do not include all who keep some poultry. We do not mean the man who keeps only *chickens*, who lets them roost in the trees in the winter, who throws them a little corn when he happens to think of it, lets them get the rest of their living from the manure pile and their drink from its washing. We do not include the person with no sense of taste, who bolts his food in five minutes without any ability to discriminate as to the flavor or delicacy of what he gorges himself with; nor the person who is utterly devoid of a sense of beauty, who never notices a magnificent sunset, a wonderfully developed and symmetrical animal, and who has no sense of color harmony, who would as soon look upon a thing of ugliness as of beauty.

We mean a fowl that will appeal to the lover of beauty, to the lover of good, well flavored and well prepared food and to the person who desires to get reasonably well repaid for his time, trouble and expense of raising and keeping his fowls.

To be a general purpose fowl it must suit the majority of people who raise poultry for themselves, and to dispose of their surplus at remunerative prices and also those who go into the business to make money.

The first requisite is that the business shall pay for the labor. A fancier may be willing to overlook the financial question, to gratify his own love of the beautiful, or his pride when he can show his flock to his neighbors, but a variety which only enables this to be done is not the bird for the masses. The bird for the ordinary breeders must furnish eggs or meat, or both. All varieties will do this to a certain extent. Some will lay a greater number of eggs than the average, others will give a greater weight of meat than the egg laying strains, which have less weight, but the quality of the largest variety is not of the highest character. The highest type of the fowl is one laying the largest number of eggs, with the greatest weight consistent with other things and of quality to satisfy the refined palate, a bird of beautiful form and color, docile and easily restrained, hardy, and adapted to wide range of country.

Some birds are suited to certain places and certain markets. For instance, when a white shelled egg will sell for 25% more than the brown shelled egg, as in the markets of New York City only, this difficulty may overcome the lack of laying in the winter season when eggs would bring the highest prices, and bring up the receipts of the year for the eggs alone, to the average. The greatest laying varieties for the whole year are generally the smaller birds. The heaviest birds do not usually lay nearly as many eggs as those of the small or medium size and while they produce more meat, it is not usually as tender, fine grained or of as good a flavor as the small classes.

The general purpose fowl must be the one which will average the best for profit, and also satisfy the other demands.

A small bird laying thirty or forty more eggs in the year and principally in the season when eggs are cheap is not as desirable for the person as one which gives nearly as many during the whole season and so many more during the winter season that they will be worth as much as the other class and which, when fully grown, will sell for fifty or sixty cents more by reason of greater weight.

While the fancier may make more money from his males than females for breeders, it must be remembered that at least one-third, if not one-half of the birds grown by the market breeder or the farmers are used for food each year. If a surplus cockerel, when fully developed, will weigh eight and a half pounds and another four and a quarter, and they are of equal quality, we find there will be double the value in the larger bird.

Are there any varieties which combine the two valuable qualities of good egg and meat production? If so, they must become the popular varieties and as there have been three or four breeds which have become popular, if a new variety originates it will have their competition and must show that it is equal to the established varieties before it can become known to the public at large as equal or superior to the other breeds, and this is always a work of time. It cannot be accomplished by a boom, nor by extravagant claims made by its breeders. These things may attract the people who are always on the lookout for novelties, but do not reach the masses.

How does the Single Comb White Orpington meet the requirements as a general purpose fowl? Let us see. First, it is with the Buff and the Black Orpingtons, the heaviest of the clean legged breeds, and it yields to none of the lighter weight birds in flavor or in tenderness and fineness of grain. As a market bird, in some localities, the color of its legs and skin are against it; as the people are used to getting the yellow legged breeds. Why? Prior to the introduction of the Orpington the only other color, excepting yellow, was black, which is not a color that attracts the eye and thereby tempts the palate; and so the people demand the yellow leg chickens. The white is not displeasing to the eye and let a person once taste an Orpington and he will never demand a yellow skin bird when he can get a White Orpington. We had this experience here in the Columbus market. Some years ago we had more culls than we could use on our own table and we would not sell them as utility birds for breeding purposes. So we went to a

This shows a 12 Section, 3600 Egg Hall—24 Compartment (2 to a section) each holding 150 eggs; each section measures 29x24x54 inches over all—weighing 75 lbs. Requires a cellar 35 feet long by 10 feet 6 inches wide, though 12 feet wide is preferable; ceiling height should be 7 feet, though special provision can be made for lower ceilings.

Investigate the Profits from Hall Hatching

Commercial hatching is a permanent, profitable business; there are great possibilities in this new business existing right around you—now. You can build a paying business from a small start by using the

OWEN FARMS

**Buff and White Orpingtons,
White Rocks, White Wyandottes,
S. C. R. I. Reds and S. C. W. Leghorns**

First Prize Ckl., New York, 1914

Have demonstrated their superior merit at MADISON SQUARE GARDEN (NEW YORK), GRAND CENTRAL PALACE (NEW YORK), BOSTON, CHICAGO, CLEVELAND, PITTSBURGH, SYRACUSE, ALLENTOWN, ATLANTA, AUGUSTA, NASHVILLE, MEMPHIS, LIVERMORE (CALIFORNIA), and BROCKTON (MASS.), by winning

More Firsts Than All Competitors Combined

THOUSANDS OF PRIZES at hundreds of shows all over the WORLD have been won by Owen Farms birds in customers' hands.

My birds are line-bred from generations of winners and win consistently year after year. My birds have made good in the past and will make good in the future. This is the reason that the majority of my orders come each year from old customers or from new customers who have been advised to buy here by old customers. This fact gives me more personal satisfaction than any one thing connected with my growing business. Every bird is selected for you by the writer or my Superintendent, Mr. Davey. We are a unit in giving every customer just little more value than he pays for or expects.

**WINNERS FURNISHED FOR
ANY SHOW IN THE WORLD**

Where Are You Showing?

Write me this information. Tell me in what classes you expect your birds to win and where you are weak. Give me all the information you can about your show and let me quote you my price on a Cock, Cockerel, Pullet or Pen to complete your string and help you make a SWEEPING VICTORY, a victory like those that have made OWEN FARMS BIRDS FAMOUS.

No matter where you wish to win, I have the bird or birds for you to make the winning; line-bred birds of my own growing, that will breed you winning chicks. My supply is not endless and when I have booked all the birds of exhibition quality I can spare will stop quoting. Write me your exact needs and place your order before a competitor gets ahead of you.

**IF YOU ARE IN DEAD EARNEST IN YOUR DESIRE TO WIN,
PLACE YOUR ORDER WITH ME.**

370 Owen Farms Birds Have Won 1st Prizes at Madison Square Garden, N. Y.

No other breeder has a record in my varieties approaching this. Many other firsts at this same premier MADISON SQUARE GARDEN SHOW have gone on OWEN FARMS BIRDS in customers' hands.

OWEN FARMS

107 William Street

MAURICE F. DELANO, Proprietor

Vineyard Haven, Massachusetts

FRANK H. DAVEY, Superintendent

market man who always killed and dressed his fowls. We could hardly induce him to buy the Orpingtons. He said he could only sell yellow legged stock. We said, "You have some customers who would know a fowl of extra quality when they tasted it, have you not?" He said, "Yes." We said, "We will bring you a few to try. Tell your customers to take one and if they are not satisfied they can have their money back and we will refund the money which you have to pay back." He never demanded the money back, but was always glad after that to get a White Orpington cull. Happily we have so far culled our flock in the past that we now can only supply our own family with the culls from nine hundred birds raised during the year.

In California where the quality is known, the high class restaurants make a higher price on their menu cards for Orpingtons than for other breeds. If a person wished to cater to the high class trade for broilers and fries, it is confidently believed that no variety can excel the White Orpingtons. With us they grow to broiler size in from six to seven weeks and after that age their growth is wonderful. At from three to four months we have had a gain from one and a half to two pounds in less than three weeks.

The White Orpington is a good laying breed and especially of rich, good sized, brown eggs in the winter season, laying more eggs from November to April than the lighter weight breeds.

It has been claimed by some professors that in other varieties, birds under Standard weight always lay more eggs than those of Standard weight, and exhibition qualities. Possibly this may be so with the breeds they tested, but our experience teaches us that it is not necessarily so in the White Orpingtons. We had a pullet which laid 224 eggs, by trapnest count, her first year, and but few less the next. She grew to weigh nearly ten pounds, two pounds over Standard weight and has taken first prize as single and in a pen in Madison Square and Chicago shows. A pullet sired from a son of this hen by an exhibition sire, which was owned by a purchaser from us this last season, laid 200 eggs in nine months and twenty days at the National Laying Contest at Mountain Grove, Mo. Up to April this pen stood third in the whole show, taking the medal for first place in February. We have just received a letter from a customer who notified us that a pullet raised from eggs purchased from us had laid 50 eggs in 50 consecutive days and we have received other letters which show results good enough to satisfy any breeder. We are satisfied that a good laying strain can be produced in the S. C. White Orpington with the Standard type for exhibition and nobody need tell us that you need to have white lobes, blue legs or pale yellow eyes in order to get eggs from the White Orpington. Hucksters may tell that story and make their victims believe it. So it is a case where care in mating and feeding can develop a heavy laying strain of Standard weight and type.

No bird is better suited to varieties of climate. We have sold birds and eggs in every state of the union and every province in Canada; from New Orleans to Edmonton in Northern Alberta, from Maine to Montana; to New Foundland and the West Indies, and have never had a complaint that the breed was not suited to the locality, and

we know that some of the finest of imported birds have come from far off New Zealand.

While on a farm it is not necessary to keep a variety restrained—in the city and on village and suburban lots the quiet disposition of the White Orpington renders it especially adapted to the conditions. You only need a fence four feet high to keep them from troubling your neighbors.

Have you an artistic eye? Well, look at the symmetrical, lordly White Orpington cock or cockerel with his Standard bred mates upon the green lawn and you will not need to look further for a sight to delight your eye and sense of harmony of color and symmetry of proportion.

Now, as to purity of color. When you go to the large shows look carefully and see if any of the other white varieties

GEORGE E. HOWARD.
(Formerly Editor of the Feather.)

Mr. Howard is well known among poultrymen everywhere, having hosts of friends in all parts of the country. During the many years as an editor, and publisher, he was especially popular with fanciers and poultrymen everywhere, and we can predict nothing but success for him in new connection with Golden & Company of Washington, D. C. Mr. Howard's long and successful career along various lines in connection with the poultry industry should be a great incentive to the many who are aiming for real success.

show purer white than the Orpingtons. One thing is certain. You did not have to double mate to get what you want as do the parti-colored variety breeders and it is not so difficult to get uniformity in color in a white bird as in buff or other colored varieties. This is recognized in exhibitions where it is thought to give the championship where a white bird is handicapped in favor of one of other color, the other colored birds being given a half-point in competition because of greater difficulty in breeding purer color than the white and we know that in the speckled varieties you seldom see two birds uniform in their markings.

Without disparaging other popular varieties which are of great value to the people at large, we confidently claim that no variety of poultry has more qualities to commend it to the public at large, as well as to the fanciers, than the well bred Single Comb White Orpington.

It is objected by some that it costs

Owen Farms Birds Will Breed You Winning Youngsters

I have sold mated trios and pens to thousands of breeders all over the WORLD that have made good and bred them better chickens than they ever owned before. No matter what you pay you have the immense advantage of the line breeding back of these birds and of the careful mating according to individual merit and blood lines that the combined experience of over sixty years with thorobred poultry enable Mr. Davey and the writer to give you.

Do you want to start right?

Do you want the best producing birds your money will buy?

Do you want the advantage of our long and successful experience?

The Answer is Easy: Of Course You Do.

We have selected and shipped nearly twice as many birds during October, November and December as we did in the corresponding months of 1914. We have found by actual HANDLING and getting to KNOW our own birds that my flocks are the best ever grown on Owen Farms. We know we can ship hundreds more superb breeding birds in my six varieties that will stand the gaff of time and that will start anew flocks not going just right, or start new flocks aright.

Owen Farms Flocks Are Established

They are years beyond the experimental stage and have been the foundation blood of most of the really successful breeders in the country. Very few really good flocks exist that do not have more or less Owen Farms blood. My birds have made good for others and will start you on an equal fighting basis and save you many years uphill work. TRY THEM FOR YOURSELF.

UTILITY QUALITIES

Owen Farms birds are famous the country over for size, bone, perfect health, vigor, prepotency and heavy laying qualities. There are no birds that excel them in these important functions and very few flocks anywhere near as good.

My Birds Live, Grow, Lay and Pay

Satisfaction Guaranteed Every Customer Every Time

I do not want any customer to keep a bird that does not please him, and any bird I ship can be sent back after a forty-eight hours' rest and the purchase money will be promptly returned. I will pay the return expressage on males at \$10.00 or more each and on females at \$5.00 or more each.

Originator-Breeder America's Premier Strain Barred Rocks

more to start with the White Orpington than with the older varieties. This is true, but let it be remembered that it is not necessary if you have a surplus of male birds in your hatch to sell them to the market man or to eat them, because if you have Standard bred birds, in a single season you will be more than able to make up the difference between the costs of the cheaper varieties and what you pay for the White Orpingtons, because there is yet and will for a long time be a great demand for male birds of good quality for breeding purposes.

Every citizen should have the good of his community at heart. Not to be interested in the public good will in a great measure defeat private enterprise. The progress of a community depends upon the health, peaceful relationship, and industry of its people. The community with the highest standard of health and happiness, with the broadest, all-around educational viewpoint will have a citizenship composed of great men and great women, because they have been given the opportunity to develop the best there is in them in the way of ability or genius. Making the best there is out of the material at hand is the problem of the good citizen.

The best preparation for doing a big business next year is doing your best today. Because an undertaking is big is no reason for the assumption that it is impossible. Marcus Aurelius says, "If anything is possible for men and conformable to his nature, think then that this can be attained by thyself."

A Happy New Year For Poultrymen Who Use NEWTOWN GIANT INCUBATORS AND BROODERS

The year 1916 promises to be a record-breaker in the poultry industry. Newtown Equipment will enable you to secure your full share of the big profits that are sure to be made, and make you happy in your work, too.

Newtown Giant Incubators

are made in many sizes, suitable alike for the side-line poultry keeper and the commercial farmer. Every model has the exclusive Newtown improvements which reduce labor, eliminate worry, insure the biggest hatches of husky chicks. And

Newtown Giant Colony Brooders

will raise the chicks; do it cheaply, efficiently, safely, with least labor and practically no loss.

Remember this:—The Newtown Giant Colony Brooder—coal-burning, self-feeding, self-regulating—was the first successful brooder of the colony type. It has been widely copied but never equaled. It is "years ahead" of all other colony brooders and has "made good" all over the world.

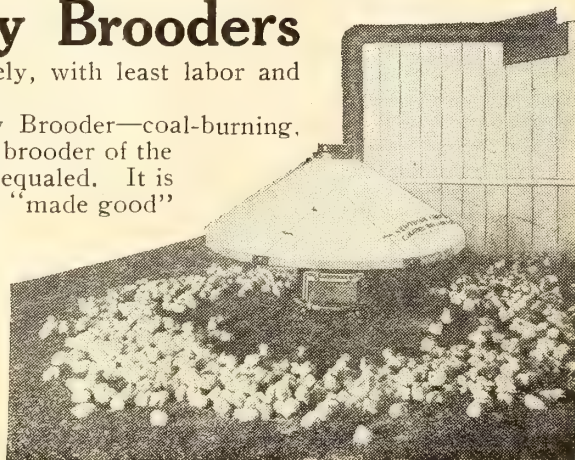

Secure Newtown Equipment if you wish to hatch and rear "the most chicks, the best chicks, with least labor and at lowest cost." Newtown Machines are *right in every respect*—and the liberal Newtown Guarantee protects you fully.

THE PALACE SHOW

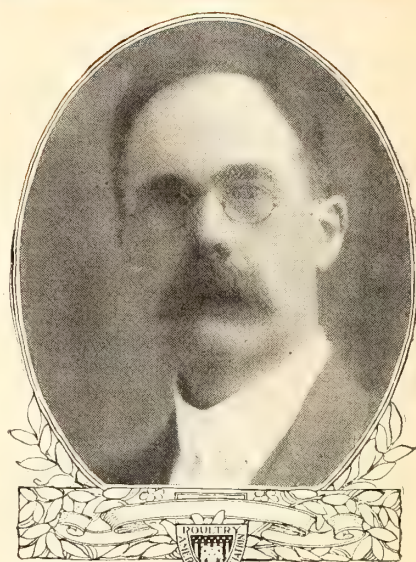

THE GREAT PALACE SHOW

L. D. Howell, Sec'y.

Fine, Big Quality Exhibition
Held in New York
City, December 7 to 11,
1915.

By Prince T. Woods, M. D.

Robert Seaman, Pres.

BYOND measure a decidedly worthwhile show! That we think aptly classifies the exhibition of the Empire Poultry Association held at the Grand Central Palace, New York City, December 7th to 11th, 1915.

It was a big show, one of the biggest we have attended in New York City. There were 2,998 entries in the poultry classes alone, counting pigeons, pet stock and birds the entries would total close to 5,000. While the larger proportion of the entries came from Eastern sources, it is interesting to note that twenty-six states were represented by poultry exhibits which included entries from as far south as Florida, Alabama and Louisiana, and from the west including Oklahoma, Kansas and California. England and Canada were also represented.

The quality of the poultry in most of the classes was remarkably good—particularly good considering the season. In some classes adult specimens needed a little more time to put them in finished exhibition condition and some of the young birds shown were decidedly immature, but take the show as a whole, one found uncommonly fine quality in nearly all of the winners. The attendance was very good, the first three days being far ahead of the gate report for the same days last year. Interest of visitors was keen and most breeders with whom we talked reported business as unusually good for the season. Several told us that November and December sales, to date, were considerably ahead of previous years and that they were looking forward to a very good season.

A large number of entries, fine quality of exhibits, and good attendance, go far toward making a successful poultry show; but it was not because of these alone that we named the Palace Show as "beyond measure a decidedly worth-while show."

Probably one cannot, or should not, say that a poultry show has a soul, but certainly it possesses a spirit which permeates the whole atmosphere of the exhibition. Express it as you will, the spirit—the atmosphere, if you please—of the Palace Show was good. It made the visitor and the exhibitor—big or little—feel that it was *his* show and a show for everybody. The show was well staged and admirably managed. The competition was friendly and the judging, we believe, conscientiously and honestly done. We did not have to listen to the hard-luck story of a single disgruntled exhibitor. There was enthusiasm, good fanciership, good fellowship and good sportsmanship everywhere and we found many veterans in the fancy earnestly and interestingly analyzing specimens with beginners. There was a spirit of democracy here that tended to boost all members of the poultry fraternity upward toward better achievement and better service. In fact, if ever the Golden Rule successfully placed an entering wedge in a poultry exhibition, it did so at the Palace in 1915. These are some of the reasons why we classed this show as beyond measure worth while. If the management continue to build as well, on so substantial a foundation, in the years to come, then things will be decidedly promising and prosperous for the poultry fancy.

We offer our sincere congratulations to Robert Seaman, president and general manager; Capt. C. E. Arnold, vice president; L. D. Howell, secretary-treasurer, and their efficient corps of assistants who helped to make the Palace Show a show worth while. We enjoyed our visit to the show immensely, we didn't have to listen to a single "knocker" and, while we worked harder and spent more time on the classes than at any previous show, we had a good time and returned home with an in-

creased store of enthusiasm for pure bred poultry.

The exhibits of manufacturers and dealers in poultry equipment, feeds and supplies were exceptionally good and attractively displayed. There were many on the main floor and a still greater and very attractive display on the balcony floor. E. F. Hodgson, of Boston, had a very large exhibit of portable houses, yards and equipment, and his exhibit was made still more interesting by the addition of large yards of poultry representing several varieties. In E. C. Young's house exhibit a mother hen and fifteen husky White Rock chicks attracted a great deal of attention. Among the other exhibitors of supplies and equipment were: American Agricultural Chemical Co., William Bartels Co., Cyphers Incubator Co., Claude W. Edgett, Model Incubator Co., Kolbe Portable Stove, Stumpp & Walter Co., I. J. Stringham, H. L. Bond, Candee Incubator Co., G. E. Conkey Co., J. G. Harrison Sons' Nurseries, Dickenson Co., W. J. Donnelly, Easy Method Co., Hazel & Birmingham, A. A. Helpay, Hartley Steel Crated Box Co., Ideal Millinery Co. (poultry feathers), Maurer Mfg. Co., D. Lincoln Orr, O. K. Poultry Co., Park & Pollard, Rust & Son, Roller Tray Incubator Co., H. L. Rand, Red Comb Feed, Swift & Co., United Brooder Co., Tywacana Farms Poultry Co., J. R. Witherspoon.

Interesting educational exhibits were made by New York State College of Agriculture, Cornell University, Ithaca, N. Y.; New Jersey Agricultural Experiment Station, New Brunswick, N. J.; New York State School of Agriculture, Farmingdale, N. Y.

The poultry judges at the Palace were:

George W. Weed, Black Orpingtons, Black Leghorns, Black Wyandottes. C. H. Shaylor, Barred Rocks. Chas. Nixon, White

WILBURTHA

WHITE LEGHORN

FIRST PRIZE COCK NEW YORK PALACE 1915

bred and owned by

WILBURTHA FARM, TRENTON JCT. N.J.

Kind Reader: Please study this picture again. Go over it section by section, and we believe you will agree with us that this bird is a really and truly Leghorn, such as is generally pictured in one's mind when we read the description of a perfect bird. Without question and a doubt we haven't handled very many better birds than this one. When we take into consideration that this is a cock bird and not a young cockerel in his prime, the beautiful shape and the remarkable carriage of the bird impresses itself very forcibly. Mr. Kerr of the Wilburtha Farms, Trenton Junction, N. J., has produced some wonderful birds, we believe, and has set a mark with his first prize cock at the Great Palace Show. The fine sweep from head to tail and the beautiful curved breast and good length of leg which this bird has, is all that any Leghorn breeder could wish for.—L. A. S.

First White Plymouth Rock cock, Palace Show, December, 1915. Well stationed bird thruout and of good type and color. Owned by Lewes P. Doerhoefer, Anchorage, Ky.—F. D. R.

First pen White Plymouth Rock cockerel at the Palace Show, December, 1915, in competition that was especially keen. Bird of wonderful type and color. Owned by Lewes P. Doerhoefer, Anchorage, Ky.—F. D. R.

First prize Barred Plymouth Rock pullet, Buffalo, N. Y., November, 1915. The wonderful color and type of this female made her an easy winner. Bred and owned by L. B. Resseguie, Millers, N. Y.—F. D. R.

One of the winning females from the first pen Buff Wyandottes at the Palace Show, December, 1915. Of good type and extra fine color. Owned by Dr. N. W. Sanborn, Holden, Mass.—F. D. R.

White Orpingtons at the Palace Show were of unusual high quality. The unretouched picture of first hen speaks for itself and is a good sample of the birds exhibited by Owen Farms, Vineyard Haven, Mass.

First, second and fourth cockerels were awarded to Owen Farms, Vineyard Haven, Mass., at the Palace Show. The unretouched picture above shows a bird of true Orpington type and breed character.

Above picture of the White Wyandotte female, owned by Fernbrook Farm, Menand's Road, Albany, N. Y., shows the wonderful type for which their strain is noted. A winner at many shows.

Besides showing their wonderful line of White Leghorns at the Palace Show the Wilburtha Farms of Trenton Junction, N. J., also exhibited a number of Columbian Rocks. The above was first pullet.

First prize Silver Campine cock, Palace, N. Y., Show, December, 1915. One of the best cockerels shown to date—a real study. Owned and bred by Homestead Farm, Wayland, Mass.

Chas. Latham, Lancaster, Mass., showed a fine line of his Barred Rocks at the Palace Show. We show here an unretouched picture of one of his winning hens. Great type and remarkable color.

The first prize Buff Leghorn cock exhibited by Monmouth Farms, Freneau, N. J., at the Palace is one of the greatest colored cock birds we have handled for some time. An easy winner.—L. A. S.

Homestead Campine Farm, Wayland, Mass., carried off the lion's share of first prizes at the Palace Show. The first prize cockerel is a model in type and color.

Bradley Bros., of Lee, Mass., rank among the oldest breeders of Barred Plymouth Rocks in this country. Their beautiful exhibit (not for competition) at the recent Great Palace Show caused many favorable comments. We selected one of the pullets in one of the pens to show our readers the remarkable quality and type of the birds exhibited.

This beautiful cockerel was the center of attraction of Bradley Bros., Lee, Mass., fine exhibit at the recent Palace Show. We know that Mr. Bradley refused several large offers for this bird. This young bird shows some of the most beautiful type and coloring we have seen for some time and as a cock bird should be a world beater.

The S. C. Anconas at the Palace Show were of exceptional quality thruout. George N. Barstow of Oneonta, N. Y., showed a beautiful lot of birds. We show here one of his winning pullets.—L. A. S.

The Columbian Rock class was unusually strong at the Palace show. The cockerel above, bred and owned by T. J. Enslin, Hackettstown, N. J., headed one of the winning pens.

Bantam Judges—Geo. Young, Clean Leg Bantams. Chas. M. Smith, Feather Leg Bantams. Jas. Glasgow, Games.

Elsewhere in this journal will be found a complete list of the awards. It is not our intention to comment on the judging other than to say that we believe it was fairly and honestly done. We have never made any pretense of

being a general poultry judge, we do not believe that any writer can hastily go thru the classes of a whole show and make worth-while criticism of the work of specialty judges, who have handled the birds and made careful and painstaking appraisal of the value of the specimens in their classes. Frequently they have reasons, good reasons, for placing the awards that cannot be noted by the observer who must make a rapid survey of the winners in all classes. However, we had instructions to look over the winners at the Palace and to

make running comment thereon. Here-with follows our observations, and, whatever else may be said of them, the comments are honest and without bias and wholly our own, based only on the way the specimens looked to us:

Barred Plymouth Rocks, 158 specimens shown in the single classes and 14 exhibition pens. Quality of birds in the winnings excellent, but considerable variation in quality running thru the classes. We do not see the benefit of having single classes for pullet-bred cocks and cockerels and cockerel-bred

New Washington, Ohio

"Palace Queen," first Buttercup pullet, color special and best female. Palace Show, 1915. Owned by Mrs. H. D. Reed, Marcellus, N. Y.

hens and pullets in this variety. It only serves to bewilder the beginner. Why not confine the double mating values to mated pens of cockerel-bred and pullet-bred birds and cut out the special single classes? It would certainly have greater educational value and tend to get rid of the idea that in Barred Rocks we now have two varieties in one. Pullet-bred cocks: 1st—a well-set, vigorous bird with good color, a bit high stationed and not as deep in breast as we like them. 2d—a vigorous cock not quite fully furnished, deficient in depth and fullness of breast. Pullet-bred cockerels: 1st—a nice clean, good colored, well-banded youngster, well furnished and promising, but shown in lower tier coop, where he did not display to advantage. 2d—a good clean-cut youngster of promising type. 3d—a neat, bright, promising specimen rather smaller than the other two. Cockerel-bred hens: 1st—a good-sized, well-finished, vigorous bird of good depth. 2d—rather small, with fairly good type. 3d—between the other two in size, shows evidence of good breeding. Cockerel-bred pullets: 1st—a nice, good-sized bird of strong type and color. 2d—neat type and of medium size. 3d—a good-typed bird but not shown to advantage on account of condition.

Barred Plymouth Rocks, regular classes: Cocks: 1st—an easy winner, large, broad, deep, lusty and vigorous with excellent color and type. 2d—a nice well-set bird, good all around, but not the equal of winner in either size or breadth. 3d—a smaller bird lacking in breast and station rather high, has nice barring. Hens: 1st—fine color, nice clean, sharp barring, type splendid

but could stand a little more weight and size. 2d—a good-sized, nicely barred bird, but not quite up in condition. 3d—good type and a good all-around bird, but lacking in evenness of markings. Cockerels: 1st—fine color and barring, type good except a bit high on legs and not deep enough in breast. 2d—a nice, large, vigorous bird of good color and type, but lacking in head points. 3d—a nice colored bird, well marked, but off in leg color. Pullets: 1st—good, clean, sharp-colored bird of nice type, neat head and good legs, barring good all over but a bit shy in wings. 2d—excellent type but not mature, color nice and sharp. 3d—a nice, neat, small bird that should show to better advantage when a yearling.

White Plymouth Rocks, 81 specimens in single classes and 14 pens. Good quality running thru all classes. Cocks: 1st—a nice, large, deep-bodied, broad-backed, white bird shown in fine condition. 2d—a large, husky specimen, but not the equal of first in either depth of breast or breadth of back. 3d—a smaller bird of good type and nice color, but only fair in head points. Hens: 1st—a good, large hen of good type and color, but carries more length of beak than we like to see. 2d—a good large bird, but not equal to winner in legs or head points. 3d—good color and type, head fair, but not same shape on both sides of skull. Cockerels: 1st—shows family resemblance to winning cock, a promising bird, a bit weak in leg color. 2d—a good broad, deep, vigorous bird with good legs, a bit coarser in head points, but in other respects would prefer him to winner. 3d—a

neat bird, smaller in size and needs filling out, not shown in best condition. Pullets: 1st—a nice, large, well-matured pullet of good type and color. 2d—a nice white bird of good type, good depth and fairly good size, a promising specimen. 3d—a promising pullet of good type and color, in fact neat all around.

Buff Plymouth Rocks, 48 singles and 1 pen. Cocks: 1st—a large, well-set, deep-bodied bird, a bit strong in color but uniform, type good, weak in head points, a bit off in condition. 2d—a fairly even colored bird, a bit shy in head points and type. 3d—lighter in color and not so uniform, a bit too high in station and would stand improvement in head points. Hens: 1st—color and type good. 2d—smaller, darker in color, a good, neat type. 3d—a good, large hen with fairly even color and good type with good depth of body. Cockerels: 1st—a fine even colored bird of a rather rich buff, good type and fair head; legs should have been cleaned before showing. 2d—a good even colored youngster with a rather high tail and a bit off type. 3d—a fairly good-colored bird with good breadth of back, tail up and breast too flat. Pullets: 1st—good color, neat, well-shaped type, but lacks maturity. 2d—good shape, good breadth and depth, rather strong color. 3d—color fair but not uniform, bird a bit thin, with legs too close together.

Columbian Plymouth Rocks, 48 singles, 5 pens. Excellent color and type shown in this variety. Cocks: 1st—a bird of fine type, good size and considerable strength of color. 2d—a richer colored bird but not quite so good in

If you want the best obtainable, come to Headquarters

Young's Strain S. C. WHITE LEGHORNS

Acknowledged thruout the World as being the Standard for all the Leghorns.

I HAVE NO OTHER BREEDS

They have been line bred for heavy egg production alone, since 1853 and the show birds have simply been chosen from the layers.

They are the only original line-bred strain of Leghorns in America today.

At the World's Premier Show of America, Madison Square Garden, I have won best display and from three to five prizes every year for the last thirteen consecutive years.

Hundreds of yearling hens for sale from my best line-bred laying stock. My cockerels this year are the best I ever raised. This is your chance to improve your stock, both in laying and exhibition qualities.

D. W. YOUNG Box E-12 MONROE, N. Y.

type. 3d—a good, large, well-set bird of good color, but a bit off in head points. Hens: 1st—a splendidly colored bird, strong in neck and tail. 2d—a hen with fine Rock type and nice color. 3d—a good, large, strong bird of nice type, but shown in laying condition. Cockerels: 1st—a rich, snappy colored, nice-marked youngster, but needs filling out in breast. 2d—a fine, large bird with considerable promise. 3d—a nice colored youngster, but a bit shy on head points and needs time to fill out in breast, has good breadth and promises well. Pullets: 1st—a nice, strong, rich-colored bird in excellent condition. 2d—a promising pullet with good type. 3d—neat in shape and color, but smaller and not equal to first two.

Partridge Plymouth Rocks, 44 singles and 3 pens. Some splendid color, penciling and type shown in this variety. Cocks: 1st—a rich-colored bird of good type, shown in good health and vigor. 2d—a bird of excellent type and color, but not as fully furnished and not so good in head points. 3d—a good broad, deep bird of nice type and a close third. Hens: 1st—a nicely penciled hen with good, rich color, type good. 2d—a close second, but not quite as well furnished. 3d—a good large hen with Rock type and good color. Cockerels: 1st—a large, deep, broad, long-bodied cockerel, but a bit shy in head points. 2d—smaller bird of fair type and good color, but weak in comb. 3d—color good, type

fair, stands knock kneed. Pullets: 1st—a nice, neat pullet with good type and color. 2d—a good, rich-colored bird with good type.

Silver Penciled Plymouth Rocks,

One of the most beautiful Golden Penciled Hamburgs we have seen for some time was the first prize pullet at the Palace show. Bred and owned by John A. Gamewell, Little Silver, N. J.—L. A. S.

only three birds shown—cock, hen and pullet. These were nice-colored, well-marked birds of good type.

Silver Wyandottes, 30 singles and 4 pens. Cocks: 1st—a nice patterned 'Dotte' of good type, color and lacing. 2d—a close second with nice open-laced breast. 3d—a coarser, large and massive specimen, with legs too close together for his size. Hens: 1st—an easy winner as to color, with fine open lacing and sharp clean markings, a bit coarse as to type. 2d—a good type with good color. 3d—a large, vigorous hen, but off in type and faded as to color, a bit too open in lacing, lacing broken and a good many mossy feathers. Cockerels: 1st—a promising youngster of good type and nice sharp color. 2d—a good, clean type, with good breast, but weak in markings on wing. 3d—a promising youngster, but immature. Pullets: 1st—a neat, sharp, snappy, well-laced bird of good type and much promise. 2d—a nice large, broad bird, a bit long in back. 3d—a nice, neat pullet with good type and breadth and excellent color.

Golden Wyandottes, only cockerel, hen and pullet shown, type and color good, but a bit lacking in size.

White Wyandottes, 160 singles and 12 pens. Hot classes and the most talked about in the show. Plenty of good birds that failed to even get a look in at the ribbons, chiefly because there were even better birds ahead of them. The

Anconas \$12.50 per 100; \$6.50 per 50; \$3.50 per 25. Our ninth season. Safe arrival and satisfaction guaranteed. **Smith-Standard Co., 7916-18 West Madison Avenue - Cleveland, Ohio.**

Parks' Bred-to-and-Do-Lay Barred Plymouth Rocks

Have Layed Their Way Into Universal Popularity

1915

The records of the last Missouri Laying Contest show a **Parks Strain Pen** of five birds made the greatest winter month record (114 eggs in January). Won more silver cups than any other pen and outlayed all other breed entries, English Leghorns included.

It was a **Parks Strain Breeder** that led by over 150 eggs all the Barred Rock Pens in the North American Laying Contest just ended.

It was a **Parks Strain Hen** that laid 291 eggs in a year, and a **Parks Strain Hen** that, by laying 148 eggs in 148 days holds the greatest sworn continuous laying record to date.

Mr. Parsons, El Paso, Texas, with **Parks Strain Hens** averaged 208 eggs from 128 hens, showing what over 26 years of careful selection, pedigreeing, and trapnesting for eggs has done for our strain. Do you wonder that our customers the past month have included South America, Australia, Cuba, Phillipine Islands, and Canada, and that we get the following unsolicited comments:

"I doubt if there is another breeder in the United States, Canada, or the whole world that produces greater layers."—G. M. Curtis, Ed. R. P. J.

"I believe Parks has the most complete record of his birds and breeding of any breeder in America."—Frank DeLancey, Ed. Poultry Press.

"We need more specialty breeders like Parks."—W. C. Denny, Ed. A. P.

"It's a pleasure to recommend your strain of known layers."—Prof. Morrison, Missouri Experiment Station.

"Parks, you've got the greatest collection of favorable reports from customers I have ever seen in all my travels."—Judge H. P. Schwab.

Foundation Stock in limited numbers only, as stock of the above quality is not produced by the thousands.

J. W. PARKS, Box J, ALTOONA, PENNA.

judge worked long and conscientiously on this variety, and he sure had some job. He must have placed the ribbons right, for we didn't hear a single "kick." Cocks. 25 in the class: 1st—a large, heavy, deep-bodied, broad-backed specimen with good head points, back very short, tail well spread at base, wide between legs. 2d—a husky, vigorous, good-typed 'Dotte with deep body. 3d—a nice bird with rather coarser head points than first two. Hens, 29 in the class and all good: 1st—a nice, clean type hen, good all over and neat head points. 2d—not quite so good about the head and has pinched nostrils, but is excellent in type, size and color. 3d—a good specimen, but a bit coarser in type. Cockerels, 56 in class: 1st—a nice, clean-typed cockerel of good size, but a trifle coarser in head points than we like them. 2d—a bit smaller and not quite as good in condition and needs filling out in breast, a good, vigorous bird and promising. 3d—a nice, clean-cut bird in type, good color, not fully filled out. Pullets, 50 in class: 1st—a nice-shaped bird with well-set body and tail, well spread at base, good in color. 2d—a large, deep, wide, full-breasted bird, good all over. 3d—a good all-around bird of good type, weakest in head points.

Buff Wyandottes, 128 singles and 15 pens. Some excellent type and color shown in these classes. We were interested and pleased to note that preference here appeared to be given to a rather rich golden buff color. Cocks: 1st—a nice-colored, large bird of good type, but with rather coarse head points. 2d—a nice type, but lacking a little in evenness of color. 3d—a good colored bird, a bit deficient in depth of breast, pale in face and head gear and a bit off condition. Hens: 1st—good even color and good type, but a bit off in carriage of tail. 2d—a bird of good type and nice color. 3d—color and shape good but off in carriage and shape of tail. Cockerels: 1st—nice-typed bird, good, rich color, vigorous and a decidedly promising specimen. 2d—a bird with good color and good depth and breadth of body, but with head carried too far back and breast too far forward. 3d—a neat, well-shaped, promising bird. Pullets: 1st—good depth and breadth of body and nice color. 2d—a close second, but lacking in maturity. 3d—a good broad deep-bodied pullet, but not so even in color and a bit off in color of legs.

Black Wyandottes, 13 singles and 1 pen. Good black color, but birds a bit coarse and full feathered. Not as good type as other varieties of Wyandottes. All good sized, large vigorous birds.

Partridge Wyandottes, 41 singles and 2 pens. Cocks: 1st—good type, good size, depth and breadth and excellent rich color. 2d—a nice, well-set bird of good type and color. 3d—a good dark colored bird, broad, but a bit high in breast and showing white in lobe. Hens: 1st—good in color, type and size, nice, clean markings. 2d—a close second. 3d—color and type good, but legs a bit close together. Cockerels: 1st—good in color and type and fair in size. 2d—a nice colored bird of considerable promise, but needs filling out, especially in depth of breast. 3d—a close third in type and color. Pullets: 1st—good color with nice penciling, type good, breast not fully developed in depth. 2d—a nice large strong pullet of good color, well penciled. 3d—a bird of nice,

Theo. Hewes, Secretary Indianapolis, Ind.

promising type, but not finished in neck plumage.

Silver Penciled Wyandottes, 12 singles and 1 pen. Good in type, size and color with nice penciling.

Columbian Wyandottes, 74 singles and 7 pens. A remarkable exhibit with unusually fine quality in color and with good size and type. Cocks: 1st—a good, broad, deep, nice-typed bird with fine color, but not quite as deep and full in breast as we like them. 2d—a nice, sharp, clean, colored bird, but a little lacking in breadth. 3d—a broad, deep, excellent type bird. Hens: 1st—a good, large hen with good neck and unusually well-marked tail coverts, tail a bit long and pinched. 2d—a well-set-up hen of good type and color with nice tail well spread at base. 3d—a close third, very similar in quality to second hen. Cockerels: 1st—a nice-typed, good-colored bird, but a bit small. 2d—a winner on his color, which is clean, fine, sharp and

One of the prize winning cockerels in the S. C. Black Orpington class at recent Palace Show, New York, December, 1915. Owned and bred by S. H. Andrews, Mineola, N. Y.—F. D. R.

snappy, with remarkable hackle and saddle. This bird not fully matured and comb lacks a good spike. 3d—a bird of good type and color and fair size, but weak in ear lobes. Pullets: 1st—a nice, clean type, deep and broad, with good color, tail a bit pinched. 2d—a well-typed bird with bright, snappy color and good size, a bit high and over-long as to tail. 3d—a promising pullet with nice color, good depth and breadth and a rather long tail.

Barred or Cuckoo Wyandottes, a small exhibit of 4 singles, one in each class. Barring good but type only fair, good sized birds with rather long backs for 'Dottes.

Single Comb Rhode Island Reds, 157 singles and 14 pens. Another truly remarkable exhibit with splendid, even deep rich color, good type and good size. Cocks: 1st—a beautiful bird, with fine shape and size, good length of back, good depth and breadth, rich, strong, even color; in fact good all over. 2d—a good specimen, but duller in color, a bit high stationed and coarser in head points. 3d—a good bird, but decidedly off in condition, looked as if he had crop impaction from eating shavings or something else in coop, causing acute indigestion. Hens: 1st—a fine, large hen with splendid shape and good color. 2d—a nice-colored, large, long-backed

continue their string of victories by adding the Palace show Blue Ribbons to their list. This being State, National and Club show in this variety, brought out the best birds in this country, winning six regular and four special prizes. At Syracuse, Allentown and Hagerstown my birds won more first and special prizes than any other exhibitor. The judges claim my birds are the best colored and shaped birds they have handled. Fine green sheen with nice yellow legs and correct mottling are a few of their good points.

If in the market for the greatest egg producers in winter at the least cost of production or fine exhibition birds, write me. Good breeding stock reasonable. Booking orders now for eggs and chicks. Don't wait, but write today.

SPRAGUE The OLDEST BREEDER of REDS in ILLINOIS

Everything that goes toward making fine Rhode Island Reds can be found in my flock. My birds have the type and color that is demanded by the leading judges of this country. Particular attention is given to the utility value of each and every bird and a specimen that does not make good all around will not be tolerated in my yards. Right now I have a

SPLENDID LOT OF Cockerels

for sale. They will improve your strain wonderfully. I will sell them at reasonable prices. If you want to start a new flock or strengthen the stock you already have, send me your order for some eggs this spring and raise some good birds for breeders in 1916. My circular will tell you how I am in a position to give you better value for less money than any other breeder. I guarantee satisfaction.

Don't fail to send for my Free Circular.

NEWELL & GORDINIER
MANUFACTURERS
DEPT. 44 TROY, NEW YORK

hen, but a bit high up. 3d—a nice-colored hen, but a little shy in type. Cockerels: 1st—a good large, broad, long-bodied cockerel, good, strong color, a bit dark and lacking a little in uniformity on surface of wings, rather high up on legs. 2d—a good-colored bird, but a little off on head points and with legs too close together. 3d—a good long-bodied bird of good depth, well set and good in color, is weakest in head points. Pullets: 1st—a neat-typed, fine-boned bird, heavier than she looks and a wonder in strength, richness and evenness of color; type good for her size, but an easy winner for her remarkable color which is strong all thru. 2d—a nice-colored promising pullet, but lacking in maturity and development. 3d—a good, large, nice-colored, long, deep-bodied bird.

Rose Comb Rhode Island Reds, 74 singles and 10 pens. Classes with fine quality in the winnings, some specimens lacking a little in maturity. Cocks: 1st—a beautifully colored bird with good shape and size. 2d—a nice-colored specimen with good length and good substance. 3d—a long, broad cock of good color, but a little high up on legs. Hens: 1st—a fine, large, rich-colored hen, well set and of good type. 2d—a hen with good color, good depth and length of body, but a bit weak about head and eyes. 3d—a nice large, well-colored hen, a bit off in condition. Cockerels: 1st—a well-set, remarkable cockerel, with good harmony of color all thru, size and shape good, but could stand a little more length to back. 2d—a rich, dark-colored bird, strong and vigorous, a trifle short as to back. 3d—still in the "kid" age and rather wild; a promising cockerel that hasn't arrived yet, has good size, length and color, but needs cooping and handling and some filling out. Pullets: 1st—a nice-colored typey bird. 2d—a close second with excellent color. 3d—another good quality specimen and close to the winners, not so well matured.

Rhode Island Whites, only one bird, a cockerel, shown; type and color fairly good, but he sure looked lonesome.

Buckeyes, one in each single class, quality fairly good.

Dominiques, one cockerel and one hen, color good, type fair.

Black Javas, two cockerels only, of good color and fairly good type.

Mottled Javas, two hens only, color and type fairly good.

Single Comb Buff Orpingtons, 78 singles and 12 pens. Good, rich color and nice type running thru classes. Cocks: 1st—nice large vigorous bird of splendid type and color. 2d—a close second, but not equal in head points. 3d—a good all-around cock with good breadth, but lacking in depth of breast. Hens: 1st—a nice, large, even colored hen of good type. 2d—a close second, large with good depth of body and fine rich color. 3—a fine, big hen with good color but poor in legs. Cockerels: 1st—a splendid, vigorous bird, good in body, nice, even color, fine head points. 2d—a good, well-colored bird, weak in head points and not well filled out in breast. 3d—a big rich-colored cockerel, with fair head points, not fully developed and breast a bit flat. Pullets: 1st—a splendid big pullet with good, strong color, but a little lacking in evenness; a bit dark on wings as compared with neck. 2d—a good, big, nice-typed pullet with fairly good color. 3d—a promising large bird with fair color and a bit narrow as to tail.

GREIDER'S FINE CATALOGUE

of fine, pure-bred poultry for 1916. This book contains many pages of poultry facts. 70 different varieties, some shown in natural colors. Illustrated and described, tells how to make hens lay, raise and care for them. Famous Greider Incubators and Brooders. Shows photo of the largest poultry farm in Penn. **Madison Square WINNERS**

Kulp's wonderful Rose Comb Brown, 242-egg strain; S. C. Brown, 240-egg strain; both big winners at Madison Square. Large birds, large eggs. 2 greatest strains bred.

Four customers in New York, two in Montana, one in Idaho, two in B. C., one in England and many others have written me that my Rose Comb Brown Leghorns excel all others as layers, and lay large eggs. I never had so many prizes reported as this year.

One man writes: "When it comes to Single Comb Browns you are in a class by yourself." I have most Wonderful male color. Stock for sale, all breeds.

Rose Comb White, first Madison Square, big white eggs, big birds, record of 244 eggs.

S. C. Whites—236 to 288 egg strains. No better in the world. Try them.

S. C. Red cockerels of 248 egg strain. They are the top.

White Wyandottes—228 egg line.

Barred Rocks—270 egg strain.

Eggs \$2 to \$7 per 15. Catalogue.

W. W. KULP, Box 70, Pottstown, Pa.

Single Comb Black Orpingtons, 36 singles and 4 pens. Good color and quality here, but specimens a bit coarse and Cochiny. Cocks: 1st—a good, big, black, full-feathered bird. 2d—a large well-colored bird, a little too coarse in head. 3d—large, full-feathered Cochiny hen, good color, but looks short on legs. 2d—a big, black hen, very similar to winner. 3d—a big, deep-bodied, full-feathered hen of broad, low-set, Cochiny type. Cockerels: 1st—a large, broad, deep, vigorous bird, rather coarse. 2d—a close second and similar in type. 3d—not quite so large, but follows close in line. Pullets: 1st—a remarkable pullet of generous size, breadth and depth, good color and same general type as the hens. 2d—close to first, but not quite as mature. 3d—a big, husky, mature pullet with nice color.

Single Comb White Orpingtons, 44 singles and 5 pens. We like the size

Buff Plymouth Rock cockerel, among the winners at the Palace Show, December, 1915. Winning here proves the quality of the birds owned by Sunnyside Farm, Bristol, Vt.—F. D. R.

and type here shown better than in the Blacks, some excellent quality running all thru classes. Cocks: 1st—a fine specimen with nice color and type and good all over as an Orpington. 2d—a close second of same type, but not so good in head points. 3d—a good, big, broad bird; a little coarser in type and lacking in depth of breast. Hens: 1st—a beautiful hen of nice type and color and good all thru. 2d—close to the winner, but not so good in head points. 3d—another nice bird, built along same lines and close to the winners. Cockerels: 1st—a splendid massive youngster of much promise, but not fully filled out, type good, color and condition fine. 2d—a good, close second, but not so fine in size or color. 3d—a good-sized bird of nice type, but weak in head points and shown a little off in condition. Pullets: 1st—a fine, big, white bird, well matured and good all over; shown in pink of condition. 2d—a good, broad, deep pullet of good color. 3d—not so good in condition, but an excellent specimen.

Rose Comb White Orpingtons, one cockerel and one pullet only. Small birds and a bit 'Dotty in shape; color and quality only fair.

Blue Orpingtons, 17 singles and 2

TOM BARRON'S WINNERS

All Egg Contests Prove Them

World's Greatest Layers

Are Still at MORRIS FARM R. 4 - Bridgeport, Conn.

I have the Most Profitable Flock of Poultry in America, and you cannot afford to be without my blood.

Remember, you take my word for nothing. I state only official records made at National Laying Contests.

In Wyandottes—

\$8.69 worth of Eggs by BARON-ESS V, the 282-egg hen, at North American Contest, 1913-14. Four others laid 274, 271, 258 and 252 eggs. The five laid 1337 eggs, an average of 267, or \$8.21 per hen.

I have a flock of 27 Hens that gave net profit per hen of \$4.67. These are the three Contest Pens I bought of Barron, and which he had at Pennsylvania, Connecticut and Missouri. All my Wyandottes are bred from these.

In Leghorns—

I am breeding the Highest Pedigree Cockerels in the World, out of the 288-Hen, winner at Newport, Eng. This affords new Winning blood for the Barron breeder. Others, 284, 256, 255, etc.

In Buff Rocks—

280, 265, 263, 240, etc. I guarantee all contest birds.

All Breeders tested by Storr's College. Free of white diarrhoea.

Buff Orpingtons

If you want Show Birds that have a show record, send for my List of winners. In my pens for 1916, are the following Chicago winners: 2 Cock, 2 and 6 Ck., 2 and 7 hen, and 3 Pullet. Order now, if you want eggs from these winners. E. L. Bemis, Fond du Lac, Wis.

Roup, Canker, Catarrh, Colds

We will send you a formula that you can mix yourself at a trifling cost that will act as a preventative or cure for any of the above diseases. We have used many remedies, but since using this simple formula have not had a case in our flock in two years. Sent prepaid for 25 cents in silver or stamps.

1915 New York BARRED ROCK Win

IN CLASS OF 307 BIRDS

Resseguie's Barred Rocks Win Best Display

This win, coupled with last year's win of best display at the Club Show, at Pittsburg, proves the quality and reproductive power of my strain. I have some very fine exhibition cockerels for sale, fit to win any show.

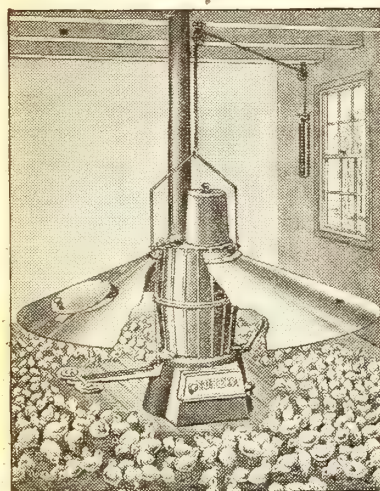

All stock shipped on approval. Write for circular.

Eggs for hatching. Book your order early.

L. B. RESSEGUIE Box A MILLERS, N. Y.

EUREKA

**PRICE--QUALITY--EFFICIENCY
A GREAT COMBINATION**

The EUREKA Colony Brooder Stove

Don't be afraid of this stove on account of the price. It is made by a large stove manufacturer and sold on a stove manufacturer's basis of profit. I am satisfied with the low profit, and you get the benefit.

Solid Cast Iron, Two Sizes**\$11.00 - 15.00****The Stove with the Corrugated Fire-Pot**

Why pay double that amount when at this price you can get a stove that is just as efficient and durable as any made.

There is nothing cheap about this stove except the price. I am a large manufacturer of stoves, and there is not a more durable stove made in my foundry at any price.

SPECIFICATIONS

	No. 1 Capacity 500 Chicks	No. 2 Capacity 1,200 Chicks
Height to top of stove.....	20 in.	23 in.
Height to top of magazine.....	26 in.	30 in.
Diameter of cylinder.....	11 in.	12 in.
Diameter of hover.....	42 in.	52 in.

Duplex grate, which stirs up the fire when shaken, and cleans out absolutely.

No dampers in smoke pipe to throw back gas.

Fire regulated by thermostats, which open and close check draft on top of stove.

Magazine on top, which adds to the coal capacity and heating surface.

Bottom of ash pit is raised 3 in. from the floor, and has asbestos board insulation.

Ash-pit door hinged, which prevents breakage and being misplaced; fire-pot is corrugated, which adds to the weight and strength. The stove is self-regulating and requires absolutely no attention, except coaling once in 48 hours and raking once in 24 hours.

The hover has a cast-iron ring on top, which sets firmly on top of stove, and furnished with wire hook, to which pulley may be attached to raise hood.

Burns hard coal or natural gas, as ordered.

I Want Live Agents Everywhere

JAMES R. WOTHERSPOON, 240 N. Front St., Philadelphia, Pa.

pens. Some excellent quality, type, size and color. Cocks: 1st—a large bird of good type and fine color. 2d—a close second in type and color, a bit flatter in front and legs in poor condition. 3d—type and color fair, shown in poor condition. Hens: 1st—a large, nice-colored hen, a bit Cochiny in type. 2d—a large, strong blue hen, but not equal of first in condition. 3d—deep, rich-colored, good-sized hen, shown in poor condition. Cockerels: 1st—a nice-colored, good-typed youngster not fully filled out. 2d—a good specimen, but coarser in head points. 3d—not equal to first two in any way. Pullets: 1st—a big, strong, rich-colored pullet, a bit coarse. 2d—only other pullet in class and shown in poor order.

Dark Cornish, 95 singles and 10 pens. Some class and some quality and more than some enthusiasm at the club meet and banquet. Cocks: 1st—a good, broad, nice-colored bird, well set and sound, with nice legs, an easy winner. 2d—a broad bird, higher in station and coarser in head points. 3d—a good, husky specimen, not so good in legs or head as first, station excellent. Hens: 1st—a good clean type, well-marked hen, with good breadth and nice all thru. 2d—a good, well-marked hen, but in poor show condition, owing to recent cold in one eye. 3d—a nice-colored hen of good type and in good condition. Cockerels: 1st—a nice broad, well-stationed youngster with a rather poor comb. 2d—a lusty youngster, shown in fine fettle and promises well; stands a little high up and needs maturity to settle him. 3d—a good all-around cockerel, well set and vigorous. Pullet: 1st—a nice-typed bird of good color and clean markings. 2d—a trim, neat, good colored pullet, close to first in type. 3d—a nice, clean youngster, with much promise, but a bit fine in bone.

White Cornish, 72 singles and 3 pens. Cornish type and size runs pretty well in these classes. A good many birds would have been much improved in appearance by conditioning and washing. Quality excellent as a whole; more coarseness of head points, particularly comb, than we like to see. Cocks: 1st—a large, heavy bird of good body, but too coarse in comb. 2d—similar in type to first. 3d—a good bird, but not well conditioned. Hens: 1st—a hen with good size, good type and good color. 2d—fairly good type, but not so large or broad as first and smaller boned. 3—a rather neat-typed bird. Cockerels: 1st—a promising youngster, but would be better for more breadth. 2d—a bit high on legs and might well have more breadth. 3d—a trifle high in station, fair in type, but not so good in color as other two. Pullets: 1st—a neat, trim young pullet of good type and breadth and nice color, but rather fine in bone. 2d—a close second of same type. 3—follows well the other two and with similar lines.

White Laced Red Cornish, 2 cocks, 3 hens and 1 pullet shown; type and size excellent and color good.

Red Caps, one pullet only shown, quality only fair.

Red Sussex, 18 singles and 2 pens. Some nice color and quality running thru classes here. Cocks: 1st—a big, strong, red bird of good type and color, a bit weak in lobes. 2d—good in type and color, but coarser in head points. Hens: 1st—a nice large hen in fairly good condition; color good but could be more even. 2d—a nice hen with good color but legs a bit off in color. Cock-

erels: 1st—a nice, clean, well-colored bird, but not fully matured and a bit wild. 2d—a large, rich-colored cockerel, a trifle coarse about the head. 3d—shown in rather poor condition, a bit high on legs and lacking in shape. Pullets: 1st—a nice, rich, dark-colored pullet of good type. 2d—a close second with good body and good color. 3d—a well-colored bird with tail a bit long and too high.

Speckled Sussex, 18 singles and 1 pen. Cocks: 1st—a fair-sized, good-typed bird with good color and poor comb. 2d—a rather coarser bird. Hens: 1st—a hen with good type and nice color, but a bit coarse about the head. 2d—a deep, broad, well-colored bird, a bit short in back. 3d—good in type, but lighter in color. Cockerels: 1st—excellent in color and promising in type and size, but rather poor in comb. 2d—head not so good as first, color, type and size fairly good. 3d—a large, husky bird of good color, but a rather high tail. Pullets: 1st—a neat bird of nice type and color. 2d—a good, large pullet, good type and fairly good color.

Partridge Sussex, 2 cocks and 2 hens shown by one exhibitor. Size good, type only fair, color and penciling good, but pretty close to Plymouth Rocks in shape.

White Faverolles, 51 singles and 6 pens. Some nice, large, well-furnished type specimens, mostly shown "as is." Cocks: 1st—a nice, large, white, good-typed specimen, well furnished. 2d—a good, large bird, comb rather poor and eyes in bad condition. 3d—a large, husky bird of good type, poor in comb and legs in bad order. Hens: 1st—a nice, deep, broad, good-colored hen of excellent type. 2d—a close second, good in type and color. 3d—a large hen with good body, but not the equal of first two. Cockerels: 1st—a good, large, deep, broad-bodied male of good color, but a bit too tight about the tail. 2d—a splendid, promising broad-bodied bird, a bit deficient in breast. 3d—good in type and color, but not so good in head points. Pullets: 1st—a good pullet, nice all over and neat in head points. 2d—a close second with good breadth and depth and nice in type and color. 3d—good, deep, broad bird, but not equal of others in head points.

Salmon Faverolles, 1 cock, 1 hen, 2 cockerels and 2 pullets shown. Type and color good. The youngsters shown not fully matured.

Buff Faverolles, 14 singles and 1 pen, all from one exhibitor. These birds are coming fine in color, type and size and show remarkable beards and muffs.

Light Brahmas, 20 singles and 4 pens. Some nice-marked birds and good Brahma type. Cocks: 1st—a nice, strong-colored bird of good type with good breadth and depth of body. 2d—a close second. 3d—a good large bird, but not equal to other two. Hens: 1st—a large, deep, broad hen of good type and nice snappy color. 2d—a nice type, but not so good in tail markings. 3d—a close third. Cockerels: 1st—a splendid bird of good type and nice sharp markings. 2d—a bigger, coarser bird, but with good Brahma type. 3d—coarser still and immature. Pullets: 1st—not fully matured, but a nice-typed bird with rich, sharp color and good markings. 2d—a promising, well-colored specimen, a bit more mature than the winner. 3d—less well developed but a good clean-cut bird.

Partridge Cochins, 2 cockerels and 2 pullets only. Quality and type good.

Black Langshans, 15 singles and 3

GERMINATED OAT SPROUTER, \$1.50

No lamps to burn, wicks to trim, temperature to regulate or chemicals to use to get a fine growth of GERMINATED OATS, the greatest green food known to the poultry world today. Will increase your egg yield, fertility of your eggs, keep your flocks in a healthy condition and at a saving of 25% in your feed bills. Anyone can build one in two hours and operate in five minutes once a day. No additional cost above the \$1.50 for material. Send us 25 cents in silver or stamps and get specifications and our system of feeding GERMINATED OATS.

ROLYAT POULTRY CO.,

Blue Point, L. I., N. Y.

BUILT FOR THE COMFORT OF YOUR FOWLS

Our poultry houses are built—not machine made, that fall apart after a year's use. We use the best lumber obtainable, buy in car load lots, and for that reason we can sell you a house already built, considerably cheaper than you can make one.

FOWLS are LIKE HUMANS

If you spend the night in a poor bed you can't do as good work next day. If you have your fowls in a make-shift house, they cannot keep in condition for either laying or showing. House your birds properly and you will find the egg yield increasing and your birds looking much better. Proper housing means the "Perfection Way." Write for our catalog, it is free.

Council Bluffs, Iowa

Now is the time to plan for Spring Hatches

Already you are counting the days till you can start hatching. But active, able-to-

live, disease-proof chicks, the only kind it pays to hatch, must be planned for. Insure health and vigor to breeding stock so they can produce lots of fertile eggs, and insure big hatches of husky chicks by giving your breeders

Pratts Poultry Regulator

It imparts vitality to your whole flock, is strengthening and invigorating. Hens lay more eggs, secures greater fertility, better hatches, stronger chicks.

25 lb. pail, \$2.50. Generous packages at \$1.00, 50c and 25c.

Also, have a good clean-up before the hatching season. To destroy lice and mites, to prevent disease and contagion, use

Pratts Powdered Lice Killer,
50c and 25c.

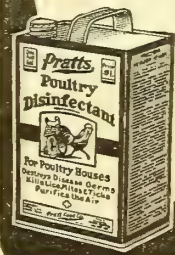

Pratts Poultry Disinfectant,
\$1.00 per gallon, 60c and 35c.

The Pratt label means goods guaranteed to satisfy or money back.

Therefore, refuse substitutes.
Insist on Pratts.

pens. Cocks: 1st—good in color and nice type, nice large size. 2d—a good cock with nice type and station. 3d—breast and back not so good as first two. Hens: 1st—a good big hen but a bit Cochiny, back rather long and holds tail too low, giving appearance of

Study the Real Photographs to be Found in the American Poultry Journal.

By F. D. ROGERS.

We desire at this time to call the attention of our readers to the fact that with very few exceptions all pictures made by our artist, L. A. Stahmer, found in this as well as all other issues of our journal, are unretouched, showing you the picture of the bird or birds exactly as they grew.

The AMERICAN POULTRY JOURNAL was the first in its field to advance and advocate the idea of showing absolutely unretouched photographs, and I feel great credit should be given L. A. Stahmer, our artist, for the many remarkable pictures of this nature that have been and are the product of his skill and genius.

The day of the made and fixed-over picture is fast fading into oblivion, and so much the better for all interested in this great industry. The proper place to look for drawn pictures is in the Standard, and not when viewing some prize specimen; for as yet no perfect bird has ever been produced. Too often by the old method of retouching photographs the buyer would, in many instances, write for a bird that was typical of the picture shown, requiring for a small sum a fowl that the Standard describes as perfect.

We know of many cases where breeders have received letters of this nature and have informed their prospective customer that the bird they describe and wish to purchase at a modest figure, is a perfect specimen as outlined in the Standard of Perfection and shown in the unretouched photograph as a certain prize winning bird at such and such a show.

The pictures in this issue are a reliable guide for all amateurs and other breeders living a distance from the national shows, giving them a great opportunity to compare their own birds with these particular winners. The AMERICAN POULTRY JOURNAL guarantees all pictures made in our art department being as true to nature as the camera can depict.

a Cochin cushion. 2d—a nice-typed, good-colored bird with good size and good carriage. 3d—Close to second. Cockerels: 1st—a good typed bird of good color and in fine fettle. 2d—a nice typed, good-colored, good-sized cockerel, carries tail a bit too far forward. 3d—a good, large bird, but not shown in as good condition. Pullets: 1st—a rich-colored pullet of good type and much promise. 2d—a large, well-developed pullet, a trifle flat in back. 3d—

542 South Dearborn Street Chicago, Illinois

immature pullet with good color, but stands knock kneed.

White Langshans, 2 cocks, 2 hens, 3 cockerels, 3 pullets and 1 pen. Type and color fairly good, legs off color in some specimens. All shown "as is" and not in best of condition.

Single Comb Brown Leghorns, 55 singles and 5 pens. Also 1 cockerel mating and 1 pullet mating pen. Cocks: 1st—nice, clean Leghorn type with fine color. 2d—a good bird but coarser. 3d—not shown in best of condition. Hens: 1st—splendid in type and color. 2d—a close second. 3d—another close one. Cockerels: 1st—good color and fair type, tail a bit too high. 2d—good, bright, well-marked bird, but rather high in tail. 3d—similar to first two, but not so good in head points. Pullets: 1st—a nice, neat bird, fine in type and color. 2d—a close second, but not quite up to first in shape and carriage. 3d—a good, clean, neat bird, but with higher tail.

Rose Comb Brown Leghorns, 23 singles. Only one rather immature bird in pullet class. Other classes showed nice type and color with plenty of quality.

Single Comb White Leghorns, 145 singles and 15 pens. Hot classes, good fashionable quality and some remarkably fine specimens. Cocks: 1st—a good all-around Leghorn with excellent type and color. 2d—a close second. 3d—good, vigorous bird of good type but coarser in head points. Hens: 1st—nice, neat type hen with good color and excellent carriage. 2d—a little larger hen of good type and color. 3d—a larger bird, not quite so good in type but with excellent quality. Cockerels: 1st—a splendid bird in shape, style and color, beautifully furnished. 2d—not quite so good, but a nice, clean bird of good type. 3d—a good specimen, but not trained, too wild and stands with tail too high. Pullets: 1st—a splendid pullet, good all over, fine type and excellent carriage. 2d—a good close second. 3d—another close one.

Single Comb Buff Leghorns, 41 singles and 3 pens. Some nice type and fine, rich color shown in these classes. Cocks: 1st—a good, rich, even colored bird of nice type, but a bit coarse about the head. 2d—a good, well-colored bird; carries tail higher. 3d—small, neat bird of fairly good type and fair color. Hens: 1st—a nice, clean, even colored hen of good type, but carries tail a bit high. 2d—a good specimen, but still higher in tail. 3d—a close third. Cockerels: 1st—good in color and type, but beefy in comb. 2d—color good but tail too high up. 3d—a promising specimen of good type. Pullets: 1st—a remarkable pullet in type and even color of rather light shade. 2d a richer colored specimen of good type. 3d—another rich colored pullet and a close third.

Rose Comb Buff Leghorns, 2 hens, 2 cockerels and 2 pullets. These show good quality and run well in type and color.

Single Comb Black Leghorns, 18 singles and 3 pens. All classes run well in type, style and color. This variety shows splendid black color well contrasted with excellent bright yellow legs and the exhibits ran well in modern Leghorn shape and size.

Silver Duckwing Leghorns, 1 hen, 1 cockerel and 1 pullet of fairly good quality.

Single Comb Black Minorcas, 42 singles and 4 pens. Strong classes and some excellent specimens shown. Cocks: 1st—a good, large cock with good color

and type. 2d—a close second with rich color and good type. 3d—a good-colored, large bird, but rather wild. Hens: 1st—a big fine hen, good color and excellent type. 2d and 3d—close to the winner. Cockerels: 1st—a fine, large specimen of good type and color. 2d—a close second. 3d—a bit coarser type. Pullets: 1st—a good, large-bodied, well-typed bird with fine color, well furnished and well set. 2d—not quite so good as first and rather pinched in tail. 3d—a nice, large promising pullet.

Rose Comb Black Minorcas, 12 singles and good type and quality running thru the classes.

Single Comb White Minorcas, 1 cock, 2 hens and 2 cockerels, good in size and type, but rather poor in condition.

Single Comb Blue Andalusians, 22 singles and 1 pen. Color, type and quality good.

Single Comb Anconas, 69 singles and 9 pens. An excellent exhibit. Cocks: 1st—strong in type and color. 2d—good, rich bird, but coarser. 3d—similar in type to first and a good third. Hens: 1st—good in type and color.

2d—lighter, but of good type. 3d—a good third. Cockerels: 1st—a nice type with good color. 2d—good in color and type, but higher in tail. 3d—neat type and good color. Pullets. 1st nice, clean type and excellent color. 2d—good in shape, size and color, tail a bit high. 3d—smaller, tail up and color light.

Rose Comb Anconas, 17 singles. Type, color and size running well thru the classes.

Silver Campines, 47 singles and 3 pens. Cocks: 1st—a good, clean type bird with good color and good substance. 2d—a good bird, but not equal in tail, head points coarser and condition a bit off. 3d—a small, neat bird, needs more size and weight for a cock. Hens: 1st—a good, substantial hen with nice type and strong color. 2d—another good strong type with good color. 3d—a clean, sharp-colored hen of good type and a close third. Cockerel: 1st—a strong-colored bird of fine type. 2d—a good specimen but not in any way equal to first. 3d—a promising cockerel. Pullets: 1st—good in type and color and good in size. 2d and 3d

—both good pullets and close to the winner.

Golden Campines, 21 singles and 1 pen, good type, color and quality in the winners. Some immature specimens in young.

Houdans, 51 singles and 3 pens. Some remarkably fine birds in type, color and crests in the winnings. Abundant quality running thru all classes.

White Houdans, 21 singles and 2 pens. This variety is coming fast and some fine birds in type, color and quality were shown.

White Crested Black Polish, 11 singles and 1 pen. Good quality in all classes.

Silver Spangled Hamburgs, 13 singles and 1 pen. Quality in classes a bit mixed; some nice birds in the blue. Young winners decidedly immature.

Golden Penciled Hamburgs, 12 singles and 1 pen, all by same exhibitor. Good type and quality. From comment noted we expect to see a bigger entry and more exhibitors next season.

Game classes small but quality good. Buttercups, 84 singles and 8 pens. Large entry was brought out by meet

of the American Buttercup Club. Interest in this breed appears to be on the increase. The exhibits certainly show better quality, greater uniformity and considerable improvement in combs. There is distinct advancement in uniformity of type, color and markings and as a rule the specimens show better substance.

Among other varieties shown were: White Silkies, White Sultans, Quail Plymouth Rocks (don't look like a variety to us), Golden Plymouth Rocks (decidedly shy in color and lacing), White Anconas (which look like old-fashioned White Leghorns), Buff Minorcas, and White Egg Americans—these last-named fowls have fairly good size, white lobes and look like oversized Leghorns with small combs. Small exhibit of Guinea fowl. Water fowl classes small but with a good representation of varieties. Bantam classes small but good and with some 23 varieties represented. Pet stock, cat show and cage bird exhibits good in quality, variety and interest.

Yes, it was a worth-while show.

AWARDS AT PALACE SHOW.

BARRED ROCKS—C. H. Latham, Lancaster, Mass., 1 pit-bred cock, pit-mated pen, 1-2 pit-bred chl., 1-4 hen, 5 pit.; Johan Rudolph Jensen, Great Neck, L. I., 2 pit-bred cock; C. L. Rivenburgh, Rockville Center, N. Y., 4 pit-bred cock, 4 chl-bred hen; L. B. Resseguie, Millers, N. Y., 5 pit-bred cock, 5 pit-bred chl., 1 cock, 2 chl., 2 pit.; T. H. Hazlett, Newburgh, N. DR. HEASLEY WINS AGAIN

with his EGG BASKET STRAIN OF S. C. BUFF LEGHORNS in the world's hottest competition in laying contests and at the December, 1915

Chicago Coliseum and World's Fair Show

At Panama-Pacific with 4 entries in 4 classes we won three ribbons. At Chicago, against the world's best breeders, we won 104 points to 31 of nearest competitor, winning championships in all shape and color specials. 37 birds entered; 34 under ribbons. At Official Egg Contests made records: 211 in 9½ mos.; 215 in 11 mos.; 230 in 11½ mos. Bred for eggs but fit to show. Egg-bred cockerels at \$3.00 and \$5.00. Show stock for anywhere. My kind pay.

Wisconsin Wins in big Hatching Contests Every Year

Year after year, these unbeatable Wisconsins have proved their superiority over all other machines regardless of price. Below are a few of the record breaking hatches taken off by owners of this famous Wisconsin \$10 outfit.

30 Days' Trial — 10 Years Guarantee
— Money Back if not Satisfied

1st Year
Mrs. J. McMahon, Veedsburg, Ind., won in Missouri Valley Farmer Hatching Contest, hatching 125 chicks from 125 eggs.

2nd Year
Mrs. C. B. Armitage, Atwater, O., won in the Successful Farming Contest, getting 181 chicks from 181 eggs in two hatches.

3rd Year
Mrs. J. W. Mize, Vaughans Mills, Ky., won in the Successful Farming Contest, hatching 208 chicks from 208 eggs, 2 settings.

4th Year
Mr. F. H. Lewis, Montrose, Pa., won in Successful Farming Contest, getting 96 chicks from 96 eggs in one setting.

5th Year
Mrs. C. C. Rich, Russiaville, Ind., won in the Successful Farming Hatching Contest, getting 94 chicks from 94 eggs—the first hatch she ever made.

These records prove beyond a doubt you can't get bigger, better hatches even if you pay twice the price. So why pay more?
or 180-Egg Incubator and 180-Egg Chick Brooder, Both for \$12

Why Take Chances? Find Out What an Incubator is Made of Before You Buy. Send for Our Free Catalog and We Will Send You a Sample of the Material Used in Our INCUBATORS and BROODERS

Then you will know which machines are built best, which will last longest and which will give you the most value for your money. It pays to investigate before you buy. For example: Wisconsin Incubators have double walls—the outer wall is of California Redwood and the inner wall is of insulating board with dead air space between the walls. Hot water heat—double glass doors—copper tank and boiler—self-regulating. Roomy nursery under egg tray. Incubator is finished in its natural color showing the high grade California Redwood lumber used—not painted to cover up inferior material. Both machines shipped complete with thermometers, lamps, egg tester and book of directions; all set up ready for use when you get them, freight paid east of the Rockies.

Order Direct from this Advertisement You can send in your order direct if you wish and save time. I give 30 days' trial with the understanding that if you are not perfectly satisfied write me—send the goods back and I'll return your money and pay all freight charges. I have been advertising in this paper for years. The publishers know me and know I do just as I agree. You take no risk. One good hatch will pay for the Wisconsin and more. Don't buy any other until you get our catalog. Send TODAY. Address

INSTANTANEOUS—AUTOMATIC—ELECTRIC

(Patent Pending) THE MOST POWERFUL EGG TESTER ON THE MARKET

All other testers are "tallow dips" in comparison! No other tester even approaches it in power, speed, safety and convenience. The very instant an egg is placed, the powerful Mazda-Tungsten lamp shoots ALL its light into and through it; not a ray of light is wasted; the egg gets it ALL. Equipped with dry batteries; no other current used. WIDE OPEN "MONEY-BACK" GUARANTEE.

"LITTLE WONDER" No. 2—2 lights (like cut) \$3.00 each, prepaid
"LITTLE WONDER" No. 1—1 light - - \$2.00 each, prepaid

Send for descriptive circulars and testimonials; they will convince you! Here's just one; from the great Ancona breeder:—"It is just what I have been looking for; would not take ten times the price of it, if I could not get another." H. Cecil Sheppard, Berea, Ohio, June 17, 1915.

Manufactured by J. B. TIMBERLAKE & SONS, STATION "A" JACKSON, MICHIGAN.

PREMIER WHITE WYANDOTTES "THE KIND YOU'LL EVENTUALLY BUY"

For the third year in succession demonstrated that they are the undisputed **Champions of Canada** at Guelph, December, 1915, (6,000 birds in the open classes, no pens shown), for the third time in succession they won every cup offered on White Wyandottes, including best cock, hen, cockerel and pullet, best display, etc., while they were again awarded for the second time in succession, **championship for the best male, any breed**, and this year more points than all strains in Canada and United States combined. This show, you know, is the **Madison Square Garden of Canada**. We also won 1-2-3 cocks, 1-2-3 hens, 1-3 cockerels, 1-2-3 pullets, sweepstakes for best four birds of any breed on our **Light Brahmas** in the best class of years.

The American Poultry Association Convention, 1916.

Cleveland wants that convention and, as a civic center, gets what it wants—nearly always. It is being backed in the fulfillment of this desire by the Cleveland Chamber of Commerce and the Forest City Fair Association, led by the Cleveland Poultry Breeders' Association. These organizations are working hard to bring the next American Poultry Association meet to the Sixth City. We fully realize that any city, laying claim to so important a gathering must be possessed of certain requisites to give weight to its claim. Among the most important of these requisites are *accessibility* and *attractiveness*. Cleveland possesses these to a high degree, no city of our country of equal population excelling. As to the first requisite, *accessibility*, we state a fact when we say that fifty per cent of the population of the United States and Canada lies within a radius of five-hundred miles of Cleveland, a majority of which population can reach that city within a night's ride as the wheels turn in these days of travel. Situated upon the southern shore of beautiful Lake Erie with its steamships leading to the north and its railroads radiating to the east, west and south, Cleveland clinches her claim to accessibility in a way that no rival city can dispute and but few excel. We believe that we are not exaggerating when we say that the very heart of poultrydom of this country lies within the area described above. This is important when we apply the rule that suggests the thought of "the greatest good to the greatest number." We think no one will take issue with us on Cleveland's accessibility. As to its attractiveness in all lines, we defy any city of equal population or wealth to excel. We have neither the time nor space in this article to even enumerate the many advantages to be derived from the standpoint of pleasure and recreation, that Cleveland offers to the traveler and sight-seer who comes within her borders. Approaching by steamer from the north the very sight

of Cleveland's homes and factories stretched along old Erie's shores for a distance of twenty miles or more is impressive to say the least. The quite trite saying "that distance lends enchantment" does not wholly apply to the sixth city; for it is upon a close study of its civic affairs that the stranger is most impressed with its greatness. The independence and progressiveness of its citizens have led to the establishment of many things of interest and pleasure within her confines. The half hundred miles or more of splendid boulevards leading into twenty or more beautiful parks aggregating 2,073 acres; the fine municipal institutions for the feeble and infirm; the famous Warrensville Farm; its wonderful bridges, feats of engineering skill; its influential civic bodies and fine public buildings; its gigantic steel plants and other manufacturing institutions; its unsurpassed street railway system—all stand as lasting monuments to the civic pride that pervades the entire citizenship from the lowest to the highest and which has culminated in the founding of so many things that interest visitors. The entire poultry industry of Ohio is with Cleveland and backing her efforts to secure the 1916 convention. Much more might be said in advocacy of the Sixth City's claim, but space forbids more at this time. What is wanted of every American Poultry Association member is to consider, honestly, these claims and when the proper time comes, vote for Cleveland and at the same time realize that by so doing he is doing a good thing for the elevation of the poultry industry of America.

OUR COVER.

"We Lead, Others Follow."

We wish to call attention to the beautiful cover design adorning this issue. It is the work of Leonard Karl Stahmer, son of our artist. We believe that it is a most appropriate design for the season. In fact, to our mind, it is the best that has ever graced the cover pages of any poultry journal in this country. Young Mr. Stahmer is to be congratulated on this fine piece of work and for the thought and the idea this cover conveys to our readers. "We lead, others follow," the motto of the AMERICAN POULTRY JOURNAL seems to fit this cover design in a most peculiar way. The New Year being ushered in by the new born baby, and the first baby chick in the incubator are leaders, still other days and other chicks will follow and we do not know what the future may bring. Whether we will have days of happiness and if our chicks are going to turn out into prize winners remains to be seen, but our hopes are set for the best. The AMERICAN POULTRY JOURNAL promises its readers during the coming year many more treats in the line of cover designs and beautiful illustrations, and we thank them for the generous compliments they have bestowed on our previous work.

Life is as serious as we make it. What finer asset for right living than a plentiful stock of Good Cheer? It is one of the best appetizers known, a recommended digestive agent, a guaranteed beautifier and an absolutely sure business booster. Most of us need to laugh a little more and worry a little less. Abraham Lincoln said, "If I did not laugh I should die and every one of you need this medicine as much as I do."

Horticulture for Poultry Keepers

Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

THESE Winter days are good days. It is real Winter. The snow is piled high and the northwest winds sweep the land, seemingly searching for the plants underneath their covering, and trying, too, it seems to take the very heart out of the trees and the shrubs. But let the winds howl as they will. Who cares? Certainly not the tender plants which are sleeping peacefully in their well-covered Winter beds, nor the fruit trees which moan as tho they were feeling keenly the icy blasts which would destroy them, when, in fact, they are only playing "make believe" and care nothing for these attacks upon them. The sap is down in the roots, safe from all harm, beneath the covering of leaves and straw and snow. In the poultry house the feathered beauties are singing as tho a breath of the Spring air had reached them, and how happy they seem to be as they make the straw fly, saying "thank you" each day for the care we have given them, by giving us a goodly number of eggs. Each time I go into the houses to feed them or to visit with them, they seem to tell me as best they can, and in a very convincing way, too, that they are glad.

The bees are very quiet now in their well-protected hives, each live with its Winter covering looking like a small snow bank.

Within, the hearth fire burns brightly and we find the Winter days and nights delightful. In the cellar is a bountiful supply of apples and cider and in the store room an abundance of popcorn. Sitting before the open fire with the lights turned low or not showing at all, with a mellow glow from the fire place over all, we are doing much orcharding and gardening these days and evenings, as we sip cider and eat of luscious Grimes Golden and Delicious apples, and well-buttered popcorn.

It is a good time to "take stock" and to be honest with ourselves and to admit our errors and shortcomings. And it is the time, too, when we naturally resolve to do our work better the coming year than we did it the last. So we are orcharding and gardening every day now. If even a small part of our resolutions are carried out, we will do better next season than ever before. And how earnestly we do mean to do just that!

I read with interest your department in American Poultry Journal and write to inquire if in your opinion it would be all right to fill in around grape vines that have been planted for about eight or ten years and the roots have grown to a large size so it would be a job to raise them.

As I am raising the grade of the place about one foot, do you think it would be injurious to the vines to fill around them, or will it be necessary to raise them to the new grade?
W. G. Jamison.
Missouri.

It will not injure the grape vines to fill in around them, as you propose, provided you prune the vines well, cutting any and all side branches up to about

two feet from the present ground line, and when you begin filling in, take two or three (three would be better) four-inch drain tile, and set them within a foot of the base of each vine, having them project several inches above the surface of the ground when you have completed the filling. This will allow the air to get to the roots, and in a few years the vines will have thrown out new sets of roots above the old ones, when the tile may be removed.

* * *

I have an interesting letter from A. H. Hollis, of Arkansas, in which he tells of the orcharding conditions in that state and goes on to say at some length that during this last season, thousands and thousands of barrels of apples produced there were sold at a loss. Mr. Hollis is very sure that the chief cause of this condition is the greed of the railroads and express companies. Mr. Hollis has given a text from which I could preach a very large sermon. But I will refrain from doing so.

My correspondent, together with a

majority of the apple growers of Arkansas, is sound asleep and does not seem to even slightly grasp the situation. It is not because of high transportation charges by railroads and express companies that each year great quantities of apples are sold at a loss or allowed to rot unsold in Arkansas. Not at all. It is because the growers are not organized, and that the selling end of the business has not been properly considered by the grower. That is all there is to it.

* * *

If the Arkansas apple growers were organized as are the apple growers in the Hood River, Oregon district, Arkansas apples would top the market, for

Poultry House Vegetable Gardening

Grown by my Forcing Roots

Grow in your Poultry houses with my selected roots, luscious Asparagus, crisp Rhubarb, succulent Witloof, Chicory or French Endive and grand Sea Kale. I have roots of the famous "Orchid Lettuce"; forces a beautiful pink color. No trouble to grow these crops in winter. 100,000 plants of Everbearing Strawberry. Superb variety.

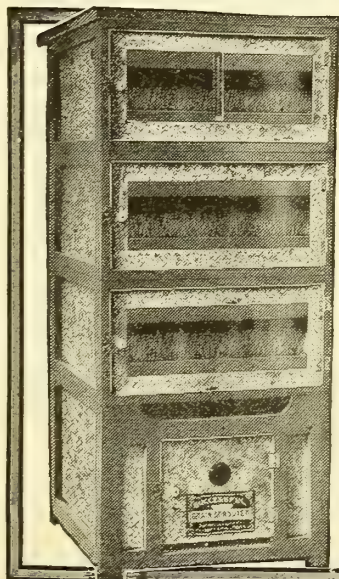

Warren Shinn, Forcing Root Specialist, Woodbury, N. J.

Poultrymen! Berries Will Pay Your Feed Bills

Plant your waste spaces to Allen's true-to-name berries. People are always willing to pay top prices for them. Allen's plants are hardy, healthy and heavy-bearing. Many varieties adapted to your soil, climate and markets; Packed fresh for shipment: We have over 300 acres in small fruits exclusively. Our 1916 Book of Berries describes each variety, and tells clearly how to select, plant, etc. 48 pages, 12 plates in natural colors. Send for your free copy today.

The W. F. Allen Co., 106 Market St., Salisbury, Md.

Turn Your Idle Hens Into Winter Egg Producers

WHY allow your hens to loaf when you can make them give you eggs a-plenty right at the time when prices are highest? Feed sprouted grain—crisp green feed that you can make yourself for only 15c a bushel with the "Successful" Grain Sprouter. Make three bushels of tempting egg-making feed from one bushel of oats, wheat or rye—increase the egg yield at least 50%—and at same time save 1/3 feeding cost. Write for catalog and 1916 offer we make on the

"SUCCESSFUL" SECTIONAL ALL-STEEL GRAIN SPROUTER

Made with double steel walls—metal trays—nothing in it to warp, shrink, swell or mold the food. Fireproof. Lasts a lifetime. Large glass doors. Made in sections so you can add more sections as your needs grow. There's a size for your needs whether you keep 50 or 600 hens. Thousands of poultry raisers say they would not be without this wonderful food maker. The newest, most reliable construction ever made in a grain sprouter. Not only turns idle hens into industrious layers but supplies feed for growing chicks—protects health—prevents chick loss. Booklet "How to Raise 48 Out of 50 Chicks" 10 cents.

DES MOINES INCUBATOR CO., 561 Third St., Des Moines, Iowa

some of the finest and most beautiful apples grown are produced in Arkansas.

Col. Richard Dalton, President of the Missouri State Board of Horticulture, some years ago found conditions in his state the same as those now existing in Arkansas, and went to work organizing the growers into a selling association. With this accomplished he found no more trouble in selling all high-grade apples produced in the state at good prices. Col. Dalton now has 8,000 apple trees. Not long ago in one of his letters, he said: "I have a very large place, and before I die I shall have every foot of it planted to fruit. When I am gone these orchards will take care of my family."

Col. Dalton is now too busy selling high-grade apples, well boxed and barreled, at profitable prices to find time to abuse railroads and express companies.

* * *

Frank Kent, of Kansas, has an orchard of apples containing 108 trees. He

Trees Ten
Shrubs Cents
Roses Each

Everything needed to beautify your home and garden, direct from Nursery at one price, 10c. STRAWBERRIES

Give the Quickest, Biggest and Surest Profits of Anything You Can Grow

The work is so easy and simple that even beginners make big profits from the start. Our free book tells how.

Kellogg's Everbearers

produce big crops of big, fancy berries from June until November. Light freezing does not affect their fruiting.

The berries are in great demand. Price ranges from 30 to 45 cents per quart. Three months after plants are set, your profits begin. Our free book tells the rest.

A Kellogg Strawberry Garden

will add beauty, pleasure and profit to your home. Get our free book and learn how to supply your entire family with delicious strawberries the year round without cost.

Great Crops of Strawberries and How to Grow Them, the best and most complete strawberry book ever written.

Fully explains the Kellogg Way. 64 pages of common sense, actual experience, strawberry facts, pictures galore. Kellogg's free service and Kellogg's Endicott Plants insure your success. Our book is worth its weight in gold—costs you nothing. Send for copy today. A postal will do.

R. M. KELLOGG CO.
Box 325
Three Rivers, Michigan

sold his 1915 crop for \$1,450. This is \$300 an acre. The buyer picked and packed the apples. Mr. Kent drew the apples to the railroad station. That beats raising grain—even in Kansas.

* * *

One of the best kept and most profitable apple orchards in the Central West is that of Miss Minnie Avery, of Council Bluffs, Iowa. Miss Avery has eight acres of trees of popular kinds. Her 1915 crop was sold to a St. Paul buyer at prices higher by far than her neighbors received for their crops.

* * *

If you are a fruit grower and are not keeping bees you are missing many dollars and a lot of fun. The bees help to make bigger crops of fruit and besides, yield a big profit per hive.

* * *

George W. Hanna, of Greencastle, Ind., seventy years old, celebrated his birthday last Fall by going out to his farm and gathering fifty bushels of Vandiver Pippin apples from a tree that is eighty-one years old. The tree was planted by his father-in-law in 1834. This is another very good reason for believing that Putnam County is one of the best fruit-growing regions in a great state, noted for the high quality of fruit produced each year.

* * *

William Barrett, who practices law in Pratt, Kan., and who goes out to his apple orchard when he is tired of thinking of other people's troubles, played with his orchard for a number of years. Last season he came to the conclusion that it was not creditable to him to produce only 300 to 500 bushels of apples from a twenty-acre orchard. So he got busy and sprayed the trees thoroly, and pruned and cultivated them. Result—3,000 bushels of choice apples which he sold at several times more per barrel than he used to get for his poor fruit.

* * *

The rabbits are plentiful here, and owing to the deep snow, it is hard to fence them out of the orchard, where they do much damage to young trees, unless the trees are well protected. It is quite a task to properly protect the trees. Last Fall I painted a number of young trees with sulfoide, in order to test the merits of this preparation. So far the trees have not been injured, altho the rabbits are numerous in the orchard.

* * *

In answer to my request I have received wild crab apples from several states. The largest and finest were sent by L. J. Demberger, of Indiana, who found the fruit growing in a dwarf

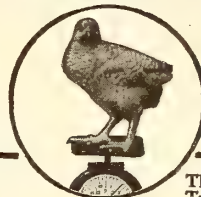

tree on top of a high and dry bluff. I shall secure some scions from this tree and use them on a seedling tree I have.

* * *

Howard P. Hoag, of New Hampshire, in his letter wherein he advises me he has sent me samples of a wild crab-apple growing on his father's farm, says:

"Father has offered to give me a piece of land containing about eighteen acres, which have been told by successful apple growers is ideal land for apples. I am interested in fruit growing and have decided to accept the offer and when thru school next year to settle down as an orchardist. What varieties would you recommend me to plant in this apple orchard?"

I would make the orchard two-thirds McIntosh Red. This apple is of high quality and beautiful in appearance. It is in demand in Boston and New York

THE SUCCULENTA CO.
P. O. Box 405-1 Newark, N. J.

50¢

markets in excess of the supply. The tree is remarkably hardy and is better suited to your climate than most any other really good apple. I note by a report that last week McIntosh Red was selling at \$4.50 to \$5 per barrel in New York. I am not sure that the Baldwin is quite hardy enough for your place, but you can consult your state authorities as to this. If it is, I would make the remainder of the orchard that variety. In no event, plant twenty acres of one kind of apples. You will need at least two varieties in order that there will be proper pollenization. I am sure twenty acres so planted will be exceedingly profitable. To be young and

possessed of health, and a twenty-acre apple orchard! Why, young man, you should shout for Joy!

* * *

In answer to F. S. Cook, Missouri:

The Hicks grape is a seedling found growing in a Concord vineyard in Michigan some years ago. It is of the Concord type. "The Grapes of New York," published by the state, says that on the State Experimental grounds, the Hicks is more prolific than the Concord and a better grower. On the piece of hill-side ground where you wish to plant about 150 grape vines, I would advise the planting of Worden, with say ten

each of Campbell's Early, Niagara and Delaware. The Worden is a better grape in every way than the Concord and Hicks—fruit being larger, earlier and of better quality.

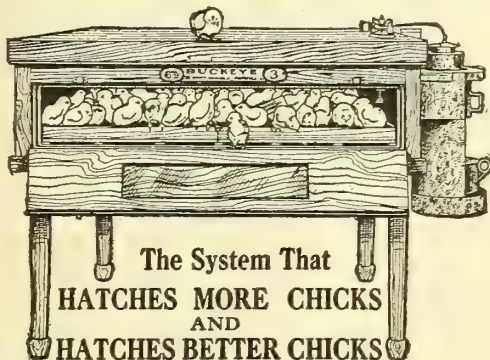

* * *

The Indiana apple show last month was a hummer. I asked Theodore Hewes to give me a report of it for this department, but have not received same.

Letters asking for all sorts of information come to me, but I received one the other day that was answered in a very few words and which will not be given here. It was from a man in North

"Buckeye"

"The Best Incubator Made"

The System That
HATCHES MORE CHICKS
AND
HATCHES BETTER CHICKS

Than any other incubator regardless of size, price or method.

Recognized by the largest breeders and the largest poultry supply dealers as the safest and surest incubator ever built. Every machine a guaranteed success.

FOR THE BIG BREEDER the 600 egg "Buckeye" will produce more chicks and stronger chicks than any big incubator you ever owned. We guarantee that. Operated with one lamp on a quart of oil a day and guaranteed to work perfectly in any temperature down to freezing.

FOR THE SMALLER BREEDER any of the other six sizes are guaranteed to do everything the big machine will do. Even the little 60 egg "Buckeye" at \$7.50 will hatch more chicks and better chicks than any other incubator—no matter what its cost.

It's the Best Incubator Made

Not the cheapest incubator but the best.

It's the incubator that is built UP to a standard and not DOWN to a price. That's why the "Buckeye" is sold by more reliable dealers than all the others combined—that's why so many of the large, successful breeders will use no other. The "Buckeye" is sold by more than two thousand of the largest poultry supply dealers and there are over 400,000 in successful operation! Let us send you a list of some of the big breeders who use the "Buckeye" and their reasons for using it. Let us send you the names of the largest dealers and their reasons for selling it. Let us tell you about the wonderful success of the "Buckeye" system and why so many have tried to imitate it. The "Buckeye" is made in seven sizes—60 eggs to 600 eggs.

600 Eggs	-	-	\$50.00
200 Eggs	-	-	17.50
110 Eggs	-	-	12.50

Sold and guaranteed by dealers everywhere at \$15.00. Insist on the "Standard" and beware of imitations. Write us for a "Standard" Catalog and we will tell you how to grow three chickens where one grew before.

Carolina who has a wife and an apple orchard. Now there is nothing strange or dishonorable in the possession of a wife and an apple orchard, but this man is in a pickle because of these possessions. His wife, a Northern girl, has

tired of the South and is going back North, so the man must give up his wife or his apple orchard. And he wants me to advise him what to do! A wife and an apple orchard are two of the best things in the world to have(and I

do hope that my correspondent will be able to retain both of them.

* * *

The fear that the Northwestern apple crop would glut the central markets this season was not well founded, the larger part of the crop being exported. The truth is that the bulk of the Northwestern crop will always go as export apples. If Central West growers would produce better apples, by properly spraying, cultivating and pruning, they could hold the markets against all comers.

* * *

Taylor Bros., of Illinois, bought an apple orchard which had been a selling proposition for all the land agents in the country. The orchard was sadly neglected for years. It is now four years since the Taylors got "badly beaten," as the neighbors expressed themselves at the time of the sale. But the purchasers in 1914 and 1915 took a big crop off the place, which netted them over \$300 per acre!

* * *

E. E. Baldwin, Missouri, writes that he is working over a block of Duchess apple trees to Grimes Golden and King David. Mr. Baldwin thought he was buying two varieties of Winter apples, and you can imagine his surprise and disappointment when he found he had been beaten in the trees. Should you ever have this experience, do not destroy the trees, but do as Mr. Baldwin is doing, top work the trees to some desirable variety. You will get fruit so much sooner, and just the variety you desire.

* * *

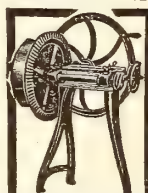

We hear a great deal about the bigness of the farm operations and orchard plantings in the Northwest and are apt to think that progress elsewhere is very slow in comparison. But in apple tree planting, the good old state of Virginia is just now a leader. It has become freely known that there is no better apple land in the country than in this state. Many Northwestern growers are

BONE CUTTER FREE

Every poultry-raiser needs a "Dandy" Green Bone Cutter. Cut green bone keeps fowls healthy, vigorous and productive. It is a wonderful food for increasing the egg supply and for pushing the growing chicks. The "Dandy" prepares the bone fresh every day—just right for feeding to best advantage. It feeds the bone to cutters automatically and is the easiest running, fastest cutter made. Write for catalogue.

Help Your Hens Molt

Help them get over it quickly—
help them lay while molting
—make them more profitable to you and save yourself time and expense by feeding—Pearl Grit.

It's a double purpose grit. It does all other grits will do and more too. It is clean, white, hard and sharp. It thoroughly grinds the bird's food and aids digestion.

Pearl Grit

is rich in egg and strength producing materials. Furnishes lime for shells, sulphur and carbohydrates for the egg itself, bone and color for beautiful plumage and builds up the bird's constitution so it can withstand laying and molting at the same time. Pearl Grit takes the place of shells, lime, magnesium, etc. It saves you time and expense in furnishing these egg-making necessities. There's no other grit like it.

Send for free valuable booklet telling how to cure many common diseases among poultry with common remedies. Most valuable, most beautiful poultry booklet ever issued. Also tells the story of Pearl Grit.

selling out their holdings and locating in Virginia, being tired of trying to overcome the marketing conditions which confront the apple growers in many sections of the Northwest. Just now Patrick County is doing more planting than any other county in good old Virginia. In referring to the orchards of this county, *The Fruit Grower and Farmer*, says:

"The Rangeley orchard covers about 500 acres, 10,000 trees, and is over 25 years old. The Patrick orchard has 25,000 trees and covers 900 acres; the Atwood orchard, with 20,000 trees and 600 acres; the Shelton orchard, with 15,000 trees and 600 acres. The late Prof. H. E. Van Deman, who was considered the highest authority in the world on apples, was president of the Atwood Orchard Company. The Blue Ridge orchard, with 500 acres, has set 10,000 trees; the Premium orchard, with 600 acres and 15,000 trees, is very near the birthplace of Gen. J. E. B. Stuart, the Southern cavalry officer. The Rich Creek Orchard Company has just been organized and the clearing and planting of 500 acres more is going on steadily. At the present time nearly 130,000 apple trees have been set and will soon be ready to give a crop of fruit that will take many trains to carry to the great markets for choice apples."

* * *

Information came to the Michigan State Experimental Station that there was a man in the state, James Boyce, who has a large apple orchard near Gibson, and that he was so treating his land and his trees that he was getting a big crop of fruit every year. Now for an apple orchard in Michigan not to have its off year is an uncommon thing. So the learned men at the experiment station sent a man down to interview Mr. Boyce and to find out how he accomplished such results. The report this representative made is an interesting one and should be read and considered by every fruit grower. Here it is:

"I'm trying to specialize on Duchesse and other Summer apples," he stated. "But, in addition, I have a lot of Baldwins, Kings and Winter Bananas. These are mature and have been bearing for years and are producing immense crops. As you see, these Baldwin trees are loaded, but they have been loaded each year for the four years I have had them."

I expressed my surprise, as many apple orchards bear good crops every alternate year. Sometimes this applies to whole orchards and sometimes to individual trees; but here was a man getting a full crop of apples from the same trees every year.

"The matter of alternate bearing of apple trees," said Mr. Boyce, "is simply a matter of the supply of plant food, and I believe I have fully proven this by the fact that I have had full crops on my trees for the past four years."

"Out West, where the apple lands sell at high figures, no one expects to get a crop every other year, but every year. That is because the soil in those particular locations is filled with plant food to such an extent that each year the trees can get all the food they want. In this locality the plant food does not become available fast enough to give a crop each year. So, when a tree is bearing a large crop one year it is not developing fruit buds for the next crop; for all its strength is going to develop the crop for the current season."

"The buds for the fruit are developed a year ahead, and, during each growing season the trees should have enough plant food available to not only develop that crop, but to also make big healthy fruit buds for the following year."

"Most fruit growers in this part of the country do not feed their orchard land anything. So, in a big fruit year the trees go into Winter with undeveloped fruit buds and it takes all of the next Summer to grow the buds for the third year's crop."

"This condition is unnecessary, as I have demonstrated. Here is a little Duchesse tree that has given me annually ten bushels of apples, simply because I have fed it all the food it could use."

* * *

Another of the co-operative orchard companies has gone into the hands of a receiver and the officers are under arrest by government officers. It is the

old, old story, and this latest company to go under is no better or worse than the usual run of such companies. But why will people allow these sharks to beat them?

* * *

I will spend January, February and March in Florida. If I can be of any service to readers of the *AMERICAN POULTRY JOURNAL* in giving any desired information regarding Florida, fruit or poultry raising down there, I will be pleased to render the service. My address will be Miami, Fla., care of the Halcyon Hotel.

Questions and Answers

Conducted by
Prince T. Woods, M. D.

Vitality in Cooped Males.

Q. (1) Will the vitality of cock birds be impaired that are separated from the hens on the first day of July and kept in training coops from that time on until the first of January?

A. (1) Prolonged close cooping will impair vitality. If the bird is intended for breeding would not keep him confined in the training coop longer than three weeks prior to showing and would not show him more than twice in same season.

Q. (2) If their vitality is not impaired, what would be the proper feeding when kept in close and solitary confinement from July 1st to January 1st of each year?

R. H. M.

A. (2) Would not keep any birds in close and solitary confinement for that length of time. The less close and solitary confinement a bird has the better. While young males may be kept herded in one flock with a few old cocks to keep them in order, for such time as may be necessary, we do not like to keep males intended as breeders away from the females for too long a time. Prefer to let breeding males have a few mates and a comfortable run and roosting quarters.

Where males are cooped for brief periods, feed a mixture of hard grains

and a limited supply of green stuff. See that they have grit and shells and clean fresh water. Feed little or no meat to confined males, in training coops, as meat in close confinement, with the usual warmth, is apt to cause too much growth of comb. Keep coops clean and renew bedding often.

Number of Layers on One Acre.

Q. (1) How many layers, American breed, can I keep on one acre for best results?

A. (1) Generally about 400. It will depend somewhat upon location and conditions. Do not allow less than 65 to 75 sq. ft. of yard space per bird where yards are frequently plowed and seeded down. Where it is desired to carry a good grass sod in the yards, allow from 100 to 150 sq. ft. yard space per bird. Where fowls are kept exclusively as layers, they are sometimes kept housed and allowed no yards. While this plan may work very well with pullets housed in the Fall and sold in Summer before the moult, we do not care for it. We prefer to have the birds get outdoor exercise in fair-sized yards.

Q. (2) How many square feet in an acre?

A. (2) 43,560.

Q. (3) How much does a ton of grain weigh?

A. (3) 2,000 pounds.

Q. (4) How much does a bushel of grain weigh?

J. B. D.

Chicopee Falls, Mass.

A. (4) It depends upon the law of your state. In Massachusetts the following are the legal weights: Barley, 48 lbs.; bran, 20; buckwheat, 48; corn, 56; corn meal and cracked corn, 50; oats, 32; peas, 60; rice, 45; wheat, 60.

Dark Comb and Jerky Walk.

Q. I have a Buff Minorca cock bird that is sick. He is a fine bird and I would like to save him. His comb turned dark at the points and seems to have shrunk somewhat. He is very unsteady on his feet and has a jerky walk like stringhalt. Sits on shanks at times while eating and it seems to be an effort for him to get settled when on the roost.

W. C. G.

Dayton, Ohio.

A. The symptoms indicate intestinal irritation. May be due to liver disorder, indigestion, or worms. Possibly there is also inflammation of front of hock joints. Look in bend of hock joint, just under feathers, for redness and possibly ulceration. If found, cleanse the parts and apply a good healing ointment, like unguentine. For the intestinal trouble give him one dose of Epsom salts. After he has fasted twelve hours, give one-fourth of a level teaspoonful in two tablespoonfuls of water. If worms are found in droppings, use disinfectants freely on droppings and on floors; give the bird tincture of Cina in the drinking water—about half a teaspoonful of Cina to a pint of water and allow no other drink. Use the remedy in the drinking water for about ten days. You can obtain it from any Homeopathic pharmacy or physician. Feed soft mash containing a little garlic or chopped raw onions. Feed very little for a few days. When improvement is noticed, give a mixture of hard grains, greens and a little cooked fresh fish. Keep grit, shell and drink before the bird.

Feeding Formulas.

Q. Please give me formulas for poultry rations used at Cornell and some of the other State Stations.

Hunters, Wash. H. M. C.
A. Cornell: Mixed grain scratch food in litter morning and afternoon: Corn, 60 lbs.; wheat, 60 lbs.; oats, 30 lbs.; buckwheat, 30 lbs.

Dry mash in hopper which is opened in afternoon: Alfalfa, 10 lbs.; bran, 30 lbs.; middlings, 60 lbs.; corn meal, 60 lbs.; oil meal, 10 lbs.; beef scraps, 50 lbs.; salt, 1 lb.

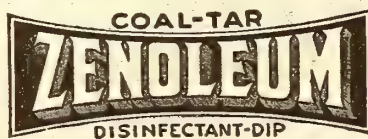

Succulent food at noon as much as is cleaned up promptly, consisting of: Beets, cabbage, sprouted oats, clover, or other available greens. Shells, grit and water always before the birds.

Lice and Mites are Profit Killers

LICE and mites live on the blood of poultry. They sap the vitality of hens. A lousy hen can't eat properly, can't lay, can't thrive. Lice kill baby chicks and steal profit. Be sure that your poultry is free from lice and mites. You can rid them of these pests. You can drive these profit thieves out of your chicken house and keep them out with

Taylor Instrument Companies,

100 Ames Street Rochester, N. Y.

Maine: First thing in morning 4 quarts of screened cracked corn in litter for each 100 birds. About one hour before noon, 2 quarts wheat and 2 quarts oats in litter. Greens at noon all birds will clean up.

Dry mash before the birds in hoppers all the time: Bran, 200 lbs.; corn meal, low grade flour, gluten meal, beef scrap, each 100 lbs.; linseed meal, 50 lbs. The linseed meal is only used in mash every other month.

Connecticut: Scratch grain in automatic feeders or hand fed morning and afternoon: Cracked corn and wheat, each 60 lbs.; heavy white oats, 40 lbs.; barley, 20 lbs.; kafir corn, buckwheat, and coarse beef scrap, each 10 lbs.

Dry mash in hoppers open at all times: Coarse wheat bran, 200 lbs.; corn meal, gluten and ground oats, each 100 lbs.; middlings, 75 lbs.; beef scrap and fish scrap, each 30 lbs.; low grade flour, 25 lbs. Green food, grit and water always before the birds.

New Jersey: At 9 a. m. equal parts by weight of wheat and oats in litter. At from 3 to 5 p. m. scratch grain: Cracked corn, 200 lbs.; wheat, oats and buckwheat, each 100 lbs. Morning feed is about five pounds in litter for each 100 birds; evening feed about ten pounds for each 100 birds.

Dry mash before birds at all times: Bran, middlings and beef scrap, each 200 lbs.; ground oats, corn meal, gluten feed and short cut alfalfa, each 100 lbs. Alfalfa left out in Spring and less beef scrap used. Oil meal added to mash in moulting season. Constant supply of grit, shells, charcoal and fresh water.

Indiana: Scratch grain morning and evening: Corn and wheat, each 100 lbs.; oats, 50 lbs. Dry mash, hopper fed, as follows: Bran and middlings, each 100 lbs.; beef scrap, 60 lbs. Greens, all birds will eat quickly once a day of either alfalfa, beets, cabbage, or silage. Milk given when obtainable. Water, grit, and shell at all times.

Missouri: Equal parts corn and wheat in Spring and Fall: in Winter, two parts corn and one part wheat. Feed at rate

DO YOU KNOW

That the happiest people are those who now own a flock of

Pape's Single Comb Black Minorcas?

New York market is paying 72 cents per dozen for large white eggs—a premium of from 12 to 32 cents per dozen over any other size or color. Surely an incentive to start with "PAPE'S", acknowledged the most profitable, large, white egg laying, table fowl, and prize winning strain in America. Am offering on approval exhibition birds, breeding pens, COCKERELS that WILL IMPROVE ANY FLOCK and that will develop into prize winning cock birds, layers, Eggs that will hatch, and Chicks at introductory prices. Catalog and assistance free.

CHARLES G. PAPE, Box B-74 FORT WAYNE, INDIANA
Have specialized on egg production for 20 consecutive years.

of a quart for 20 hens in early morning and about three pints for 20 hens at evening feeding. Ground oats are hopper fed and to each 100 lbs. of ground oats is added 10 lbs. beef scrap, 1 lb. ground charcoal and 1 lb. salt free from lumps. When ground oats are not available: Equal parts of wheat bran, middlings, and corn meal with beef scrap, charcoal and salt in same proportion as with the ground oats. Scratch grain is fed in litter six inches deep. Green food: Alfalfa fresh cut, cabbage, beets, or sprouted oats, what they will clean up quickly. Layers get a scant feeding of wet mash between 1 and 3 p. m. of equal parts bran, corn meal and middlings, made crumbly with sour milk or buttermilk. Grit, shells and water always.

Kansas: Scratch grain morning and evening: Wheat, 300 lbs.; corn, 200 lbs.; oats, 100 lbs. Dry mash: Middlings and corn meal, each 60 lbs.; bran, 30 lbs.; cut alfalfa, 10 lbs.; meat scrap, 50 lbs.; oil meal, 10 lbs.; salt 1 lb. Greens at noon, all they will clean up in fifteen to twenty minutes: Sprouted oats, fresh cut alfalfa, clover, corn, rye or beets. Oyster shells; grit, charcoal and fresh water always.

Dubbing Male Birds.

Q. What is dubbing a cockerel and how is it done?
J. C. M.
Buffalo, N. Y.

A. Dubbing means cutting off comb and wattles. It is easily done with a sharp scissors. Don't try to cut either comb or wattles too close. We generally let the bird bleed until the bleeding stops and believe it is better to do so. Keep the bird away from the others. A little iodine can be painted on the cut surface, but it is not often necessary.

Fish Scraps.

Q. Am sending you a sample of fish scraps that I can buy for a little over a cent a pound. You will notice that it is salt. Is it safe to feed?
M. A.
Amesbury, Mass.

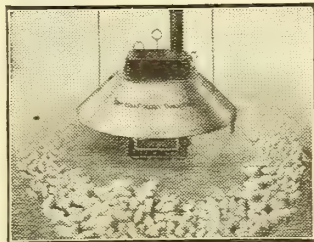

A. Have examined the scrap carefully and find it same as a sample recently sent to us, practically salt fish fibre. We do not believe that it is safe to feed unless well freshened before using. We have fed salt fish to hens by hanging up a salt cod, well dried, for them to pick at; but we would not want to risk feeding this salt fish scrap. Salt is poison to fowls if they eat too freely of it and this scrap would be apt to tempt them to eat it altogether too freely. It is decidedly salt, so salt in fact that it nearly takes the skin off one's mouth. We would not use it in a dry mash, and we would not use it in a moist mash without first freshening

BABY CHICKS

Let us book your order now for March delivery. B. P. Rocks, S. C. White Leghorns, and Broiler Chicks. Also Eggs for hatching. Write for our catalog and price list; a postal will bring it.

Progressive Incubator Co. Box 135 Racine, Wisconsin

it by washing well in cold water. Even then we should want to test it out pretty carefully on a very few fowls at first.

We use a fish scrap freely for breeders and layers, but it is not a salt scrap. It is made from fresh fish and has been put through a cooking process and one for extracting the fat. We have never known it to give a fishy taste to the eggs or flesh of the fowls. We like it very much for growing chickens—it is practically all protein and fish bone and it helps toward quick growth and big well-meated frame.

Any clean wholesome fresh fish food that is free from fish oil, ought to make good cheap poultry food where the poultryman lives near large fisheries. Some plants around Lake Erie feed quantities of eel-pouts, which make fine growing food for chicks and egg food for layers. Near the ocean there are always opportunities to get good low-priced fish waste for poultry feeding. We can buy good, clean fish scrap from 2¼ to 2½ cents a pound for poultry feeding, cooked, dried, oil extracted, and sacked for shipment. Local supply of beef scrap has been so poor in quality lately that we have used fish scrap exclusively for our flocks for several months and have found it to be entirely satisfactory. We have never had better or finer flavored table eggs.

Canker—Ration for Adult Stock.

Q. (1) I have two cock birds that show the following symptoms: Loud breathing like a snore with mouth held open; when crowing they throw their heads to one side and make a clucking sound in throat. They eat all right.

A. (1) Examine the throat with mouth of bird held wide open and pulled a little forward, using the finger on throat just below base of lower bill to throw the upper end of windpipe up into view. You will probably find canker. With a blowpipe or blowgun, dust the following powder directly on the canker patches: Mix one grain of finely powdered permanganate of potash and a little powdered gum arabic with about an ounce of sugar of milk. Use a fresh mixture. Wherever it hits the wet mucous membrane it will turn purple. Apply several times a day to the canker patches until there is improvement and then use less often. Use just enough of powder to cover the canker, do not blow in enough to choke the fowl.

Q. (2) Some of my cock birds have lop combs, one fell clear over to one side and another just had the ends lop.

A. (2) May be due to injury or may be because birds are out of condition. We wouldn't use such birds for breeding.

Q. (3) My birds have a fairly large run but not much range. What would you advise feeding to old cocks and hens that I want to use as breeders

57 Varieties Chickens, Ducks, Geese and Turkeys. Prize-winning, pure-bred, hardy, northern raised. Fowls, eggs and incubators; low prices. Most successful farm; 19th year. Large fine catalog 3c. Larkin & Herzberg, Box 127 Mankato, Minn.

\$2.96

I. Putnam, Route 105, Elmira, N. Y.

next Spring? Should they have mash and grain before them all the time? Laurel, Ind. P. S.

A. (3) Would give them a grain mixture of equal parts by weight of cracked corn, wheat and oats and would feed this in litter morning and evening. This will give a pretty good percentage of oats, but oats are good for them. Would keep them on the regular dry mash, but would only open the hoppers just after noon and would close them at night closing time or at watering time in the morning. Feed greens freely, all they will clean up in half an hour. If you vary their ration too much or cut them down to scant rations and then put them back on regular diet at breeding time you may start them moulting. Feed them enough to keep them in good bright vigorous condition, but don't get them overfat.

Contamination.

Q. I have a S. C. White Leghorn cock that has been running all Fall with a flock of mongrels. He is a good bird and I would like to breed him. Some say his get will be mongrels. Do you think so? I have ten fine White Leghorn pullets I want to mate him with. Alpha, Md. M. M.

A. Breed him to the pullets if all are healthy and in good sound vigorous condition. We don't take any stock in the so-called contamination danger from a cock bird running with other than his own variety. If cock and pullets are unrelated, you may get a throw back of some off-colored feathers, but it won't be from any contamination.

Width of Roosts.

Q. How wide should roosts be for American class varieties? For Mediterranean class varieties? H. J. Alberta.

A. For large birds use roosts of 2x4s placed 4 inch side up. For small birds use roosts of 2x3s placed with 3 inch side up. Where roosts are not over

three feet long you can use one-inch boards of proper width, placed with wide side up. Round the edges of top of roosts.

Buying Breeders.

Q. If you had just six nice pullets of your variety and not over fifteen dollars you could afford to spend for new stock, which would you do—buy a cock, a cockerel or a trio?
Manlius, N. Y.

F. G. A. We think we should pick out a leading, representative specialist in that variety and we would send him the \$15 and ask him to send us the very best, well-matured healthy cockerel he could sell us for \$10 to mate with our pullets and we should describe the pullets. For the remaining \$5 we should ask him to send us fifteen of the best hatching eggs he could deliver at the price and we should try to have them delivered during the first week in April. If the breeder is as square with you as we believe he will be, you should get some pretty good foundation stock out of the \$15 so invested and a good start. When you buy, tell him just what you told us.

Stalled on Green Bone.

Q. My pullets and hens were laying fine, when all of a sudden they began to shut down and in a few days where I had been getting fifty eggs a day, I am now getting only from two to five. They seem healthy enough and sing, but their droppings are pretty soft and sometimes watery. I ran out of beef scrap and could get some green bone cheap, so I have been feeding that. Could the bone do it? They went at it ravenously and the egg yield dropped from that time. Eggs are 65c. Please help me.
J. J. C.

Newark, N. J.

A. You probably stalled your pullets on green cut bone and put them out of laying condition for a time. Go a little slow with the green bone. Don't feed all they will clean up. Never feed enough to make the droppings loose and watery. Work a little low grade flour into your mash, about one measure in every nine or ten measures of the regular mixture. If you cut down on the green bone as soon as you noted trouble, it is probable that the pullets are again laying all right by the time you read this.

Sore Head.

Q. Please give a remedy for sore head in fowls. I have lots of trouble with a disease they call sore head here. Hilda, Texas.

A. B. Wash affected parts with warm water and good hard yellow soap. Remove all crusts. In the wash water use a teaspoonful of creolin, pyrocarbol, or zenoleum to the quart of water. After thoro cleansing, dry the parts carefully; if moisture oozes from the sore spots, dust on a little powdered boric acid. If

Warm Water—Get Eggs

A Little Putnam Stove keeps water for poultry unfrozen in zero weather; 9 inches diameter, 4 inches high; holds 3 pints of oil and burns a month without refilling; never needs trimming; prevents frosted combs; increased eggs pay for stove in 30 days; fire proof. Most useful poultry appliance ever sold. Each \$1.50, six for \$8.00, postpaid. Satisfaction or money back.

L. Putnam, Route 105, Elmira, N. Y.

parts remain dry rub on a little carbolated vaseline. Daily treatment for a few days may be necessary to effect a cure. Clean up and thoroly disinfect the poultry quarters.

Where Can I Buy Chickens Without Roup?

Q. Where can I buy chickens that don't have roup? Mine get colds and roup every Fall and Winter. It always comes about the same time. B. Martinsville, Ind.

A. There are plenty of breeders who will sell you birds bred from stock that never had roup. Buy of some breeder who keeps his birds in fresh-air houses. If you try to breed "cured" roup stock birds, you will always have roup in your flocks. The young stock are almost certain to develop the trouble at about the same time of year the parent birds had the disease. Breed only healthy birds, never breed a bird that has been sick, house your flocks in open-front houses; breed, feed and manage your flocks for health; keep things clean, and you won't be troubled with roup. Very few experienced breeders have much difficulty with roup nowadays. When they do, it is because some show management permitted dirty, not properly disinfected, coops in the show room. Just remember, if you want to avoid trouble, do not breed birds that have been seriously sick and apparently cured. You don't know whether they are cured or not, or whether they will stay cured.

Cedar Excelsior.

Q. Would it be all right to use cedar excelsior for nesting material to prevent lice and mites? F. J. Hanson, Mass.

A. We have never used it. It costs about \$2 per 100-lb. bale and we can get good soft hay for nesting material cheaper than that. We have used common excelsior for nesting material and it serves very well as a makeshift, but is a bit too stiff. The only difference with the cedar excelsior is that it might flavor the eggs, if very cedary and that would be a decided objection.

Time of Feeding Wet Mash.

Q. In feeding wet mash, mixed crumbly, to laying hens when should it be fed; morning, noon or evening? Manchester, N. H. A. C. J.

A. It really does not make any particular difference so long as you regularly feed it at about the same time on mash days. We should feed it at the time of day we found most convenient and not oftener than five or six days a week.

Feeding Cabbages.

Q. Will it pay me to buy cabbages for Winter green food for my chickens? I can get good cut clover at a low price. Cabbages are high. I can also get large white carrots and mangels. Detroit, Mich. G. E. M.

A. We buy waste cabbage when we can get them for Fall feeding. We do not care much for them after the severe cold freezing weather comes. Frozen cabbage is poor food for laying hens. You should be able to get along very well with the cut clover and roots. If mangels are fed raw, don't feed heavily enough to have them freeze before eaten. Frozen mangels are a source of danger. Cut clover, if properly cured, makes a very fine coarse food for poultry.

ANOTHER GREAT RECORD

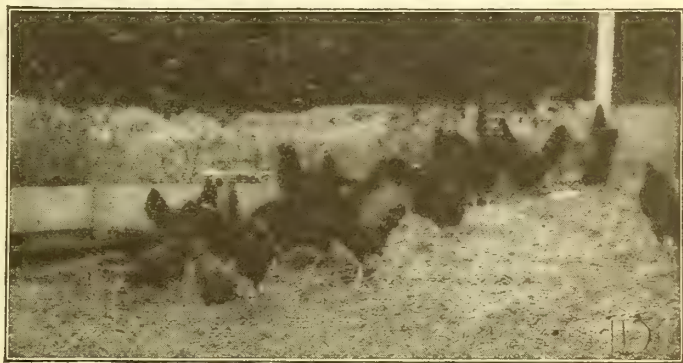

Three Generations of Sheppard's Famous Anconas

Looks Mighty Good, Doesn't It?

These are the birds that are world famed as winter layers. They have the wonderful record of 256 average for a flock. That is why my customers call them egg machines.

The pullets in the picture below were hatched from eggs laid by my birds in picture above, when parent birds were only four months, fifteen days old.

Here are the pullets that laid when four months, seven days old. Their eggs hatched these wonderful youngsters shown below, producing three generations in less than one year, making a record that stands alone

Sheppard's Famous Anconas are bred to make good, both in the show room and as layers. They have made good for me. They will do the same for you. Stock, Eggs or Baby Chicks for sale. Send for our 70-page catalog which will be mailed upon request.

"WHY I BREED SINGLE COMB BLACK MINORCAS."

A Breed that Invariably Lays Pure White Eggs Weighing from Thirty to Thirty-two Ounces to the Dozen Is Worthy the Serious Attention of Any Egg Farmer.

By HENRY D. BARTO, Manlius, N. Y.

I RECOLLECT some years ago when I was first becoming interested in poultry of reading about the sale of a large flock of Black Minorcas to a breeder who was to continue the former owner's lucrative business. At that time I remember saying to myself, "Mercy! Who would ever want black chickens." It made such an impression on me that I have always remembered it. But as time went on and my poultry enthusiasm grew I came to have a definite aim in my modest operations. I couldn't do anything else but choose the S. C. Black Minorcas.

My aim was the production of the fanciest of table eggs and the S. C. Black Minorca is "it" every time in this respect. Any breed that invariably lays pure white eggs that weigh from thirty to thirty-two ounces to the dozen is worthy of the serious attention of any sincere egg farmer. So I was literally forced into breeding them, and as my acquaintance with them ripened, my admiration for them has grown with every passing year.

It is a fact that Black Minorca eggs command the highest price on the American market today. In any discriminating market—and most cities are—prime Black Minorca eggs command enough premium over the ruling market prices to nearly, if not quite, pay the cost of feed. That is, if one has enough surplus eggs to sell to make it worth while. As far as my own experience goes they command from 5 to 15 cents more per dozen. Just figure it up for yourself and see what it amounts to in a year's time. If Black Minorcas are hatched before May 1st they prove very dependable Winter layers—when eggs are worth real money.

Many people are under the impression that S. C. Black Minorcas are small fowls, like the rest of the Mediterranean breeds, but it is not so. They weigh more than Reds and Wyandottes, just the same as Plymouth Rocks, and are within a half-pound as heavy as Orpingtons. So you see, they are a large fowl, and many well-bred specimens will go from eight and a half to nine and a half pounds for hens and between ten and twelve pounds for cocks. "Some chicken," which many poultry editors overlook in their "Advice to Beginners."

For the table, as prime roasters, Black Minorcas are in the "A" class, irrespective of what a great many writers say and think about their merits. For broilers they are not so good as their black pin feathers are against them, but just as soon as they are out of the pin feather stage they dress off into splendid appearing fowls. They have more solid white meat than any one would suppose, and if well cared for are always tender, juicy and sweet.

I never could understand why Black Minorcas were not classed among the general purpose breeds as I never yet have been discriminated against when I had surplus fowls for market. People who try them once often demand more.

Black Minorcas are easily confined and always contented. Two or three years ago I made a new yard for my growing stock of five-foot fencing but I didn't get around to complete the gates, so extemporized one of the three-foot chicken wire nailed to the posts, and in all this time I haven't had a single fowl, young or old, fly over the gate. It is not that they can't fly, but they don't. Black Minorcas have large, powerful wings and can fly as high as any fowl, but they don't except under exceptional conditions. So I have never made my gate as the convenience of being able to step over the wire with both hands full far outweighs the looks of the thing.

I am seriously thinking of building my next fence of four-foot wire, as I know of a breeder who yards his with this high of wire and has no trouble keeping his fowls in. But the point I wish to bring out is that there are not many breeds so easily confined.

The Single Comb Black Minorcas are easy to breed true to Standard, even with the single mating system. In mating just be careful not to mate brilliant colored males and females, as this produces too much purple anyway, and is apt to give many red feathers in the neck. For good color I much prefer brilliant colored males, free from purple, and dull black females, all of them as near Standard as possible in type, size and comb, with good black under-color.

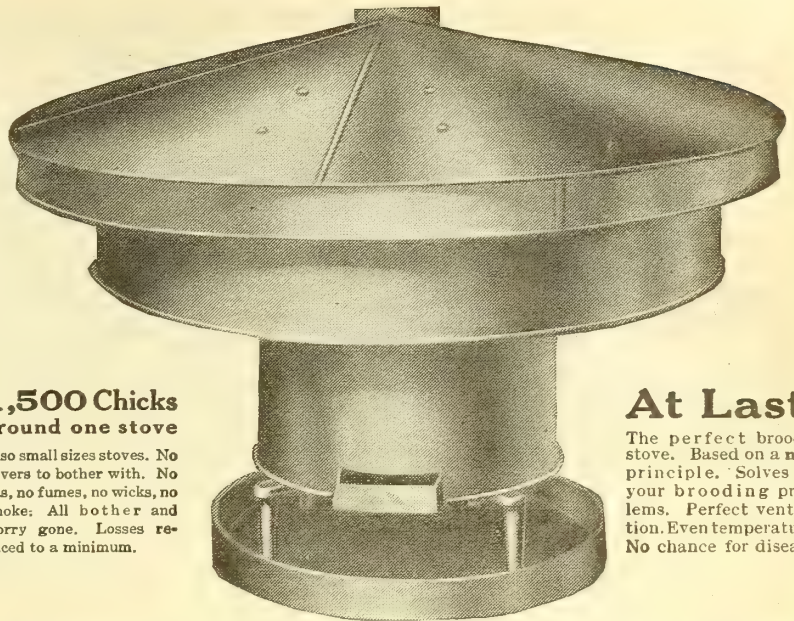

Such a mating gives splendid young stock of both sexes with many first-class exhibition specimens and very few culls.

Look carefully for white feathers, and if found discard that fowl from the breeding pens no matter how good he or she may be otherwise. I made that mistake once and now, after four generations, I notice the same white feather in some of my young stock that I had in the great, great, grandsire.

Black Minorcas need a richer meal mixture than most fowls and my standard mash is equal parts by weight of bran, corn meal, white middlings and beef scrap, which is before them all the time. Of this mash they will consume astonishing quantities and turn nearly all of it into those great big, handsome eggs instead of fat, as many fowls would do with similar feeding. For the grain feed I use a ready-mixed grain mixture both morning and night except in mid-Winter, when I add equal parts of white cracked corn to the grain mixture. You will notice I said white cracked corn. I have found by experience that white corn gives better color to solid black or solid white fowls than the yellow, but it is often difficult to obtain.

With my chicks and young stock I religiously follow the Cornell method of feeding, as it seems to exactly fit their requirements for rapid growth and proper development.

Black Minorca chicks are sturdy little black and yellow imps and when once well hatched they grow at an astonishing rate. But they need plenty of green food that appeals to them in order to make the best growth. I have found dandelion greens the best of any so far and they seem to prefer them to any other, and fortunately they come very early. Some of the weights of growing chicks with me have been twelve to sixteen ounces at six weeks, two pounds at ten to twelve weeks, four pounds at four months, six to six and a half

1,500 Chicks around one stove

Also small sizes stoves. No hovers to bother with. No gas, no fumes, no wicks, no smoke. All bother and worry gone. Losses reduced to a minimum.

At Last!

The perfect brooder stove. Based on a new principle. Solves all your brooding problems. Perfect ventilation. Even temperature. No chance for disease.

Brood Your Chicks 30 Days Free

Here, at last, is the perfect brooder stove! A wonderful, new invention. The Simplex Brooder Stove solves all brooding your problems. Use this wonderful new stove in your own brooder house 30 days absolutely free. Give the Simplex a thorough trial before you decide on your brooding system for next year. Try the stove under all conditions. Make any test you know of. Then at the end of 30 days, if you are not delighted send it back and we'll cheerfully refund your money. You alone are the judge. Send coupon for catalog.

Simplex Brooder Stove

Send the coupon below today for free catalog. This stove works on a new principle, costs only 1-5 as much and means 1-10 the work, 1-4 the operating expense of ordinary brooder systems. One stove successfully broods 1,500 chicks. Also small sizes. Self-regulating—holds an even temperature. Does away with all fuss and bother—eliminates all worry. Don't delay. Send the coupon, today, for free catalog and full particulars.

Turns Chick Losses To Profits

This wonderful new brooder will raise 20 to 50 per cent more of your chicks than you have been able to raise by old-fashioned methods. No more deaths from white diarrhoea and poor ventilation. It turns the losses from dead chicks into big profits for you. The Simplex soon pays for itself by extra money it makes. This wonderful new stove will double your poultry profits in a year—and it costs only one-fifth as much as other brooding systems. Send the coupon today.

Saves Labor and Expense

The Simplex Brooder Stove means one-tenth as much work—costs one-fourth as much to operate as any other system. Does away with all fuss and bother. Simply constructed—easily installed and cared for. It is self-regulating—needs no watching—eliminates all worry. Try it for 30 days free.

Free Brooder Book Send the Coupon Today!

Send the coupon today for valuable book that tells how to "Increase Your Profits by Decreasing Mortality"—absolutely free. It tells how to solve all your brooding problems. How to save the chicks that you have been content to lose every year through disease and faulty brooding—how to make twice as much money from your poultry. Tells how to eliminate all the work and worry of raising large broods of chicks. Complete instructions on the scientific building of a brooder house. Reliable information about fuel. Also catalogue and complete details of the wonderful Simplex Brooder Stove and our 30-day free trial offer. This valuable book absolutely free. You assume no obligations whatever. Read this book before you decide on next year's brooding system. Send the coupon today.

LADY SEWARD.

1st prize winner at National Egg Laying contest, Mountain Grove, Mo. Record 223 eggs.
Bred by Richard M. Seward, Lewistown, Ill.

Buff Orpingtons

WIN AGAIN at Louisville, Ky., Nov. 22-27, 1-2-3 cockerel in a class of sixteen and also SWEEP STAKES PEN. I have plenty of high class stock for sale, all bred in line from our winners at Pittsburgh, Indianapolis, Columbus, Cincinnati, New Orleans, Nashville, Atlanta, Springfield, St. Louis and Louisville. Prices very reasonable. Mention American Poultry Journal.

O. M. ABBOTT - Box 10 - WHITELAND, INDIANA

pounds at six months with eggs starting to come when they make a weight of five and a half to six pounds. They grow very fast but do best when hatched early—early enough to have all the benefit of the new tender grass and weeds.

In culling I first take all those that don't grow as rapidly as the rest, the ones that seem forever getting started, as they seldom if ever make layers of any consequence. My next cullings are confined to those that have some glaring defect of either type, color or comb formation. In this way I keep my flock looking uniform and then after they are in full laying I look for imperfect, small or off-colored eggs, and the pullets that lay them go to the fattening pens as soon as discovered.

These various cullings, especially the first and the last, I consider of the utmost importance to keep the breed up to its established reputation of being prolific layers of the fanciest of table eggs.

Here is Your Chance to Save Money

Read This Letter—We Just Received it from San Jose, California

Simplex Supply House, Pontiac Building, Chicago, Ill.

Gentlemen:—The Simplex "Faultless" Poultry Feeder ordered from you some time ago has given entire satisfaction and is indeed "faultless" in every particular in our opinion, as is expressed by the enclosed order for twelve Grit Boxes and one-half dozen Dry Mash

229 S. 16th St., San Jose, Cal., Nov. 26, 1915.

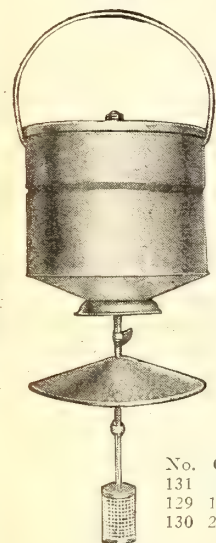

Feeders, all of which have been tested out to our entire satisfaction.
Thanking you for past courtesies, promptness and square-dealing, I remain,

Yours very truly,
S. N. GOLDY.

10 Quarts
The Original

The original "Kant Klog" automatic feeder; feeds anything from millet seed to whole corn, either mixed or separate. Swinging pendulum motion — absolutely adjustable — simply impossible to clog.

Birds peck at grain in bait carrier, swinging pendulum and grain drops from cup under hopper to deflector and then on ground.

130	20-qt.....	2.50	2.00

We Sell Direct from
Factory to Consumer

Save 20% to 33 1/3%
By Buying Your Poultry
Appliances from Us

We specialize in the manufacture of automatic feeders, which save more time and more feed than any other appliance in the poultry yard. No well equipped poultry farm is seen today where automatic feeders are not used. On large farms they save the wages of at least one man. For small flocks they cannot be excelled. Filling the feeder once a week is a good deal less work than feeding several times a day. There will be no grain lying around on the ground, no loss from pilfering birds, rats and mice. No staying at home simply to feed the chickens.

In addition to cutting down the feed bills, automatic feeders increase the egg production of the hens. They will be in laying condition at all times, as these feeders give them the proper exercise and they digest every bit of grain they eat.

Be up-to-date and increase the profit from these fowls at least 25% by the use of automatic feeders. Made in styles and sizes shown hereon. We guarantee they give absolute satisfaction. If they do not, we refund the money. That's the guarantee under which we sell all our products—direct to the consumer at wholesale prices.

Our money-saving catalog describing Feeders, Brooders, Incubators, Grain Sprouters, Fountains, Feeding Troughs, Mash Hoppers, Grit Boxes, Brood Coops, Exhibition Coops, Trap Nests, Egg Carriers, Leg Bands and various Remedies and Preparations of merit will be sent upon request or upon receipt of your order from this advertisement.

CHICAGO COLISEUM POULTRY SHOW

CHICAGO COLISEUM POULTRY SHOW

A GAIN a wonderful exhibition of the best in Standard-bred poultry was seen at the Chicago Coliseum show, held December 10-15, 1915. It has been our great pleasure to attend this great exhibit every year since 1908 and we are now glad to be in a position to convey to our readers as best we may, the magnitude of this great National show.

I believe some of the former exhibitions have possibly seen more birds in competition, yet, without a doubt, the general quality thruout found at this 1915 show far excelled any seen in former years. Great credit should be given Mr. Theo. Hewes, the well-known judge and show man, and all those associated with him, not only in being able to establish a show of this magnitude, but for their great ability in being able to sustain their reputation from year to year, giving to the poultrymen and general public one of the greatest shows staged in America.

One of the features of the Coliseum show is their great system of cooping. This year was no exception to the rule. The coops were well arranged and ready as soon as the birds arrived. Sixteen of the best known and most capable judges to be found in America were engaged to officiate this year at Chicago and did their work to the general satisfaction of all concerned.

White Plymouth Rocks were, as usual, one of the best classes in the show. The White Plymouth Rock Club met at Chicago this year and found two of this country's most noted breeders competing for the honors, namely, H. W. Halbach and U. R. Fishel. When judges Johnston and Shellabarger had finished their work, honors were found divided; Mr. Halbach, however, winning most of the prizes. It was unquestionably one of the best classes of White Plymouth Rocks ever cooped at any show.

Barred Rocks were, as in former years, the largest class found at the Coliseum. Chicago has long been a Mecca for Barred Rock breeders from all sections of the middle west, and this year was no exception to the rule. Honors in this class were more or less evenly divided. D. F. Palmer & Son showed a fine string of birds and received their share of the ribbons. The birds shown by G. A. Walker were grand in type and color. His first prize exhibition pullet being an especially fine specimen. W. D. Holterman of "Aristocrat" fame was found well among the winners. John W. Yant, Mrs. Chas. Popham, Arthur Irwine, Howard Sears, Geo. Dyson, W. E. Cowan, D. M. Hammond, and Fred Bowers were well represented in these classes.

Partridge Rocks were shown in good numbers, of quality above the average. Meadow Lawn Farm made their first exhibit at a national show, establishing a grand record, winning every first but one, besides most of the other prizes. Their first prize cockerel was indeed a wonderful specimen.

Buff Plymouth Rocks was a fair sized class, many good birds shown.

About the usual number of Silver

Wyandottes was to be found at Chicago this year. With the old time veterans, namely Tarbox Bros. and Ira C. Keller, competing for the honors. Tarbox Bros. showing more birds and winning the majority of the prizes. Their wonderful Silvers are known all over America and the birds shown by them this year well sustained their reputation. The second cockerel, owned and exhibited by Ira C. Keller, was a fine specimen.

Golden Wyandottes were well shown. F. L. Clausen made his first exhibit at Chicago and with four entries succeeded in capturing first cock and first hen on birds that deserve special mention. Ira

Seventh Annual Exhibition of the Great Mid-West Poultry and Pet Stock Association, held at Chicago, December 10 to 15, 1915. Quality the Best Ever Seen at the Coliseum.

By F. D. Rogers

C. Keller was also a winner in this class.

White Wyandottes was one of the steller classes of the show, F. M. Eakin winning best display and most of the prizes. It is quite the habit of Mr. Eakin to make a great winning at this show. However, this year, he eclipsed all former records. His winning of 1st, 2d, 3d and 5th cockerels in a class of twenty-two grand birds was phenomenal. His first prize cockerel was a star and one of the best White Wyandottes ever seen at Chicago. J. H. Powers was another winner in this class and showed birds of fine type and finish. L. J. Demberger won 1st pullet in a class of twenty-seven (with only two entered). She was grand in type and color thruout and well deserved the place. Mr. Demberger also won 1st young pen on birds of grand type and color thruout. Elton C. Mahon was also among the winners in this class.

Buff Wyandottes were not a large class, but teemed with quality, with honors being divided between W. F. Schultz and Chas. Howison. Mr. Schultz's first pullet was grand in both type and color. The first cockerel shown by Mr. Howison attracted much attention and was much admired by many of the fanciers during the week. At the Panama-Pacific Exposition show held November of this year, Mr. Howison also won 1st cock and 1st cockerel with two birds entered.

Partridge Wyandottes, not a large class, Dr. G. S. Culver showing birds of good type and color and was well among the winners.

Rhode Island Reds, both Single and Rose Comb were very large classes and it is doubtful if any show held in this

country during the present season will excel or even equal the wonderful quality found this year at Chicago. The honors were principally divided between F. E. Harrison, Schenley Heights Poultry Farm, Longfield Poultry Farm and A. A. Carver. W. L. McMillan won first Rose Comb hen, Michael Coffey first R. C. pullet. The first prize S. C. cock bird and first prize S. C. pullet shown by F. E. Harrison deserve special mention, were remarkable specimens in both type and color. First S. C. cockerel shown by Schenley Heights Poultry Farm won the admiration of every Red fancier during the show, possessing wonderful type and grand color in all sections. First R. C. cock, owned by Longfield Poultry Farm, well sustained the reputation that is enjoyed by this farm, and was well placed. Chanticleer Farm won 3d S. C. pullet on one entry. Ed. W. Mahood made a fine showing, his 3d prize S. C. cockerel being a fine bird in both type and color, not shown in the best condition. The first prize S. C. young pen bred and exhibited by A. A. Carver was an exceptionally good pen thruout. Mr. Carver has long been noted as being one of this country's prominent breeders and to win first young pen in this, the keenest competition, speaks volumes for the quality of his stock.

Buckeyes were a good class. Elton C. Mahon won 1st cock, also 1st cockerel and the majority of the other prizes. His birds were of exceptionally fine quality and were well shown.

The old time Light Brahmas seemed to be again on the boom and a very large class was seen this year at Chicago. The annual club meeting was held here this year, being, doubtless, one of the reasons for their great showing. Many Eastern birds were to be found in these classes. Harvey C. Wood and J. W. Shaw winning most of the coveted prizes.

About the usual number of S. C. Brown Leghorns were on exhibition. Herman F. Rikhoff won most of the prizes, his birds, having good type and color. Roy J. Belsley and H. F. Becker were also among the winners. Classes in the R. C. were rather small.

The quality of the S. C. Buff Leghorns was above that usually seen. The classes were well filled and showed much quality thruout. Dr. L. E. Heasley won the majority of first prizes. His birds possess a wonderfully even shade of buff and are much nearer to real Leghorn type than usually seen in Buff Leghorns. The first prize pen cockerel was one of the best Buff Leghorn males ever seen at Chicago, grand in color and type thruout. F. S. Smith won 1st pullet with one entered. She was an especially fine specimen having a very even shade of buff in all sections. A real down-to-date Leghorn in every way.

S. C. Anconas were a small class, however, birds of good quality were to be seen. Cora A. Garbutt won 1st cock, 1st hen and 1st cockerel; several other prizes on birds of exceptionally

One of the main attractions at the recent Chicago Coliseum Show was the display pen shown by Mrs. J. H. Harnley, Zion City, Ill., containing her "champion pen" of S. C. White Orpingtons at the World's Fair, San Francisco, Cal., November, 1915. They were wonderful in both type and color, and won the admiration of hundreds throughout the entire week.—F. D. R.

fine type and color. Miss Garbutt is well known among Ancona breeders, having been among the winners for several years at this show.

Fairly good sized classes of S. C. Black Minorcas were shown. The well-known and popular Chas. G. Pape captured most of the coveted prizes on birds of grand type and color. John L. Brown was also a winner in this class.

Unquestionably no variety at the present time is gaining more in popular favor than the Sussex, both Red and Speckled varieties. Many fine specimens were found exhibited. Rawnsley-Shields Poultry Farm, A. C. Williams, Red Sussex Farms, Tarbox Bros. and A. A. Carver were among the prominent winners. Unquestionably the classes this year in these varieties excelled those ever seen at former shows.

S. C. Buff Orpingtons were one of the largest classes in the show. The club meeting being held this year at Chicago probably accounting in a degree for the many Buff Orpingtons present. Prominent among the winners we find A. C. Williams and Rawnsley-Shields Poultry Farm. These two farms won most of the prizes. J. W. Cruzan had one cock bird entered and won first. This bird was a grand specimen and well placed.

The Chicago show would not be complete without a large class of S. C. White Orpingtons. This year proved

no disappointment in this regard. The winnings were more or less divided, between Aldrich Poultry Farm, F. M. Gensch, Woolery Poultry Farm and Rogers Poultry Farm. Mr. Aldrich's first cockerel was a real dream, wonderful in both shape and color. F. M. Gensch was a most consistent winner, his first prize old pen possessing true Orpington type, were birds of fine color and well matched. Much the same comment could be made of first young pen owned by Woolery Farms.

Fair sized classes of Black Orpingtons were shown. Sylvester McCabe was among the winners.

Rogers Poultry Farm made a nice winning in Blue Orpingtons.

Houdan class small. Francis K. Cook was winner in the White Houdan class.

Fair sized classes of Dark Cornish with Dawdy and Dawdy being among the winners, their first prize pullet being an exceptional specimen of good color and extra fine type. The display of turkeys and water fowls and Bantams were not as large as seen in former years. Shoemaker Poultry Farm made a large showing in many classes of both poultry and water fowls, winning a goodly number of the prizes.

One of the fiercest contests for supremacy took place in Single Comb White Leghorn alley. It was literally a meeting of the East and the West. The three principal contestants were the

Rancocas Farms of New Jersey, Eugene C. Smith and Meadowlark Farm of Illinois and Frank E. Hering of Indiana. The cup offered by the Coliseum management for the largest number of points won by an exhibitor was awarded to Mr. Hering, whose total was 66; Mr. Smith was second in number of points with 43 and the Rancocas Farms third with 36. Individual honors likewise went to Mr. Hering, who was awarded first in three classes—cocks, cockerels and young pens. Rancocas was awarded first in hens and old pens and the Meadowlark Farm got first on a wonderful pullet. First cock was a beautiful specimen of good size, long back, plenty of coverts and strong head points. He was easily a class among the cock birds exhibited. Second cock was a trifle larger with a beautiful back and saddle. Third cock resembled the second in size and type but was not so well finished. Fourth and fifth were strong specimens, but not so strong in plumage as they will be a month later. The first hen was a beautiful fowl with a long back, splendid type and strong head points. There was little to choose between second and third which were only a degree less strong than the first. First cockerel was strong in every section, beautiful five-point comb, strong eyes, a long, perfectly moulded back with as well furnished saddle and flowing sickle.

(Continued on Page 123)

Campine breeders should carefully study the above picture, which shows to good advantage this wonderful cockerel, winning first at Chicago Coliseum, 1915. Owned by Martling Hennery, Ridgefield, N. J.

First Speckled Sussex cockerel, Columbus, Ohio, 1915. Undoubtedly one of the best cockerels shown to date of this ever popular variety. Bred and owned by A. A. Carver, Seville, Ohio.—F. D. R.

First prize White Wyandotte cockerel at the recent Chicago Coliseum Show was one of the real "stars" of the entire exhibition. Owned and exhibited by F. M. Eakin, Bucyrus, Ohio.

First S. C. White Orpington hen, Chicago Coliseum, December, 1915. One of the best White Orpington females seen this year. Bred and owned by Woolery Farm, Bloomington, Ind.—Unretouched Photo.

We would suggest our readers note the wonderful type found in this grand specimen winning first hen at the Buffalo Show, 1915, being an easy winner in her class.—F. D. R.

The above male is without a doubt a most wonderful specimen from every standpoint—a wonder in both type and color—a real study for every Orpington breeder.—F. D. R.

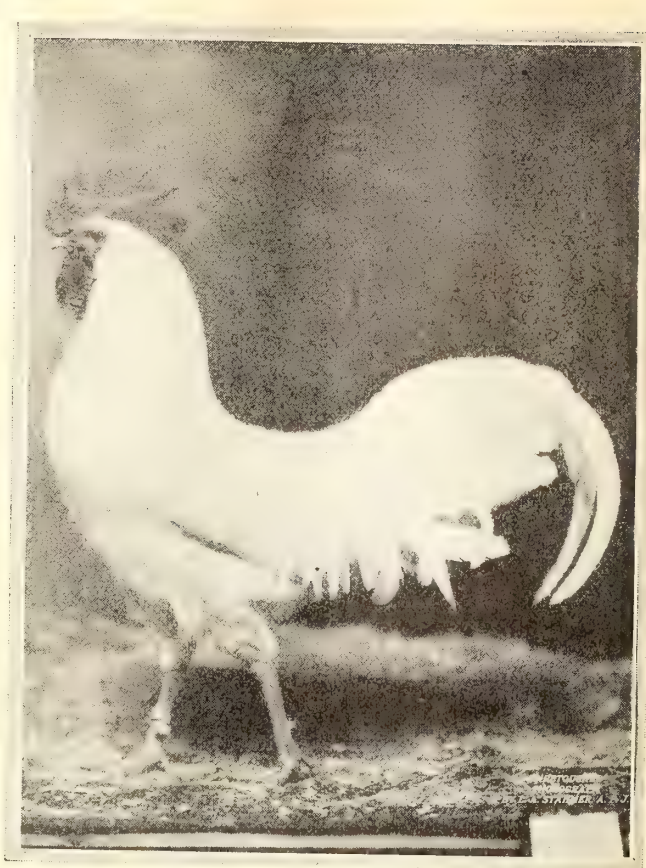

First prize cock, Chicago Coliseum, December, 1915, bred and owned by F. M. Eakin, Bucyrus, Ohio. Mr. Eakin is to be congratulated on his wonderful winnings at this great National show. This bird is typical of the many found in his yards.—F. D. R.

The above picture shows to good advantage the type found in W. F. Schultz's Buff Wyandottes. This particular male was 1st cock at the recent Chicago Coliseum Show, December, 1915. Mr. Schultz is located at Cuyahoga Falls, Ohio.—F. D. R.

First young pen Speckled Sussex cock, Chicago Coliseum, December, 1915. One of the best males of this popular variety shown to date. Bred and owned by Red Sussex Farm, Marysville, Mich.—F. D. R.

First young pen S. C. W. Leghorn cockerel, Chicago Coliseum, December, 1915. Note the well rounded breast and fine back and saddle. Owned by Frank E. Hering, South Bend, Ind.—F. D. R.

Silver Campine cockerel among the winners at the Chicago Coliseum Show, December, 1915. Especially good in both type and color. Bred and owned by Frank E. Hering, South Bend, Ind.—F. D. R.

Mrs. J. H. Harnly, Zion City, Ill., is well known as a breeder of S. C. White Orpingtons. The above pullet is one of the winners at the World's Fair, San Francisco, November, 1915.—F. D. R.

First prize S. C. W. Leghorn pullet, Chicago Coliseum, December, 1915, in one of the best classes ever seen at this show. However, this female was an easy winner. Bred and owned by Meadow Lark Farm, Elgin, Ill.—F. D. R.

First S. C. Buff Leghorn cockerel, Chicago Coliseum, December, 1915. Having extra good type and tail carriage. One of the best Buffs shown to date. Bred and owned by Dr. L. E. Heasley, Holland, Mich.—F. D. R.

First S. C. Buff Leghorn hen, Chicago Coliseum, December, 1915. Note the long back and well spread tail of this wonderful female. Owned and bred by Dr. L. E. Heasley, Holland, Mich.—F. D. R.

First Blue Plymouth Rock pullet, Chicago Coliseum, December, 1915. One of the best females of this new variety shown to date. Bred and owned by Fishel & Hasselman, Hope, Ind.

Rawnsley-Shields Farm, of Columbus, Ohio, showed a wonderful string of Buff Orpingtons at the recent Chicago Coliseum Show. The hen in the above unretouched picture was winner of first prize.—L. A. S.

Comment on this beautiful Buff Orpington pullet, the first prize winner at Chicago Coliseum, is unnecessary, as the unretouched picture shows off the remarkable type and even surface color of the bird better than it can be described in type. An easy winner in a hot class. Rawnsley-Shields Farm, of Columbus, Ohio, are the owners of this beautiful bird.—L. A. S.

First prize S. C. White Leghorn cockerel, Chicago Coliseum, December, 1915, is of good type thruout and chalk white in color. Owned by Frank E. Hering, South Bend, Ind.—F. D. R.

One of the winning S. C. Black Minorca cocks at the Chicago Coliseum, December, 1915, is indeed a fine specimen, and typical of the many owned by John L. Brown, Anderson, Ind.—F. D. R.

His type was finer than that of the other winning cockerels and his plumage was snow white. The second and fourth cockerels were very much alike, each being larger than the winner of the class. The judge stated that this was the strongest cockerel class ever exhibited by the Coliseum. The first pullet was easily the best Leghorn female in the show. She had size, long back, with a well-spread tail and stood out easily as the real sensation in the class. The second and third pullets were good sized Leghorns with long backs, well-spread tails and pure white plumage. In fact, there were unplaced pullets of sufficient strength to win first in many Leghorn shows of quality. The judges had a difficult time in determining the honors among the first old pens. It was finally given to the Rancocas Farms especially thru the strength of a magnificent male. Mr. Hering was given

Especially good picture of a wonderful bird, both in type and color, possessing many of the qualities of a great breeder. Was first Buck-eye cockerel, Chicago Coliseum, December, 1915. Owned and exhibited by M. B. and H. W. Deem, Eaton, Ohio.—F. D. R.

second and third places in this class. The male heading his old pen suggested in type and in various sections the cockerel that won the honors in the single class. In the young pens first place went to Mr. Hering by a good margin. Mr. Smith won second and fifth, with the Meadowlark Farm getting third, and Rancocas fourth. The males were all very strong and the females carefully mated.

SILVER CAMPINES.

The Campine Club of America held its annual meet at this show and for the first time in the history of Silver Campines, three of the foremost prominent breeders met to determine the mastery—Messrs. Jacobus and Martling from the East and Frank E. Hering from Indiana. Mr. Jacobus won three firsts, Mr. Hering two firsts and Mr. Martling one first. But Mr. Hering won the challenge cup offered by the Campine Club of America for the greatest number of points scored. Mr. Martling second and Mr. Jacobus third. All of the awards were divided among these three breeders. Mr. Hering getting fourteen places, Mr. Martling nine and Mr. Jacobus seven. First cock was a beautifully barred male with a white hackle. The principal defect was lack of station. The second cock was not so well

FARRANT'S Single Comb BROWN LEGHORNS

Again proved their class by winning eight places on eight entries, second best display and Judges' Cup at the Grand Central Palace, N. Y., Show, December 7 to 11, 1915. Show birds that will win for you at prices that are right. Send for circular.

Broiler Chicks.....	2.00	4.00	8.00

Chicks all hatched from the very best free range utility stock. Satisfaction guaranteed. Will also have a few Barred Rocks and S. C. White Leghorn chicks to offer from fine exhibition matings. Also have eggs for hatching and a full line of colony brooders. Will be ready to ship chicks after March 6th. Get your orders booked now. Catalog and price list free. Mention A. P. J.

FRANK BLUM

Dept. A

Rural Route No. 2

NEW WASHINGTON, O.

Get Started Right This Year

With a Good Strain of

S.C. White Leghorns

We not only have the facilities for shipping chicks in large numbers, but better still, we have a grade of stock that you will find hard to equal from any other plant in the country.

We know how good our stock is, and how it ranks with other breeders, yet we never make rash claims and statements about the tremendous laying qualities of our birds. We probably have as many 200 to 250-egg layers as any breeder in the country, but every bird does not lay this quantity of eggs, and chicks from our stock would not average these numbers. However, we are breeding from our best, year after year, and expect at some not distant date to be able to advertise a genuine 200-egg strain.

One customer who placed a small order with us as late as July 8th last year got as high as 252 eggs from one bird, and twelve others beat 200 eggs. Our strain will average, one with another, either in large or small flocks if kept under proper conditions, about 75 eggs, and it is the good average egg yield that tells the story at the end of the year and not the lone individual.

Our stock is more advanced in other ways besides laying qualities; no strain on earth has more stamina and vitality, and chicks purchased from us are consequently very easy to raise. All our breeders are bred from large white eggs from pure white stock that will weigh a little more than the average Leghorn.

We Want Your Order for Chicks this Year

Our prices are no higher than for common, haphazard bred Leghorns. Our hatching capacity takes care of 50,000 eggs at one setting, and all our Leghorns are hatched from one strain; not purchased promiscuously all over the country.

We shall be ready with

5,000 CHICKS A WEEK IN FEBRUARY
12,000 CHICKS A WEEK IN APRIL

10,000 CHICKS A WEEK IN MARCH
12,000 CHICKS A WEEK IN MAY

Our prices vary from 13c to 17c a chick, according to whether you buy in lots of 25 or 5,000. We make prompt deliveries, and ship in the best possible manner.

Once a customer, always a customer. That's what keeps our plant growing bigger and bigger every year.

Eggs for hatching, 90% guaranteed fertile at only \$8.00 per 100; cheaper in 1,000 lots. Special matings from high class record layers, the finest on our farms, \$3.00 and \$5.00 a setting.

Grand cocks and cockerels for sale, weighing from 4½ to 7½ pounds. Special low prices on high class Trios and Pens.

Send for our 96-page catalog, which fully describes our Leghorn plant. It is well worth \$1.00 to every new beginner. Free for the asking.

Hatching Eggs and Day-Old Chicks

from the

"Million Egg Farm"

5000 S. C. White Leghorn Eggs per day

1st Pullet, Grand Central Palace, N. Y., 1914

You can get fresh S. C. White Leghorn hatching eggs shipped when you want them from eggs laid in a single day. These eggs are laid on the RANCOCAS POULTRY FARM by choice, selected, fully-matured hens, bred for high egg production. Every breeder of our big, husky Rancocas strain—"The Laying Line"—has the style and finish of Standard Leghorns.

100 Per Cent Fertility. Over 1,100 customers in 41 States bought 146,000 hatching eggs from us last season. This year we can supply 200,000 hatching eggs—everyone with a guarantee behind it of 100 per cent fertility. No orders too small or none too large—all customers get the same quality and service. Don't wait until the rush season is on, but let us book your order NOW.

Day-Old Chicks—Delivery Guaranteed. A live chick guaranteed at your express station for every one ordered. All chicks sold are from eggs laid on our own farm and hatched just like the chicks we keep to supply our own flock. Order early, for even with our enormous incubator capacity and large flocks of layers, we cannot always fill orders unless booked ahead. Order today, and make sure of getting chicks when you want them.

Send today for free booklet, giving prices of S. C. White Leghorn hatching eggs and day-old chicks, produced at Rancocas Poultry Farm—"The Million Egg Farm."

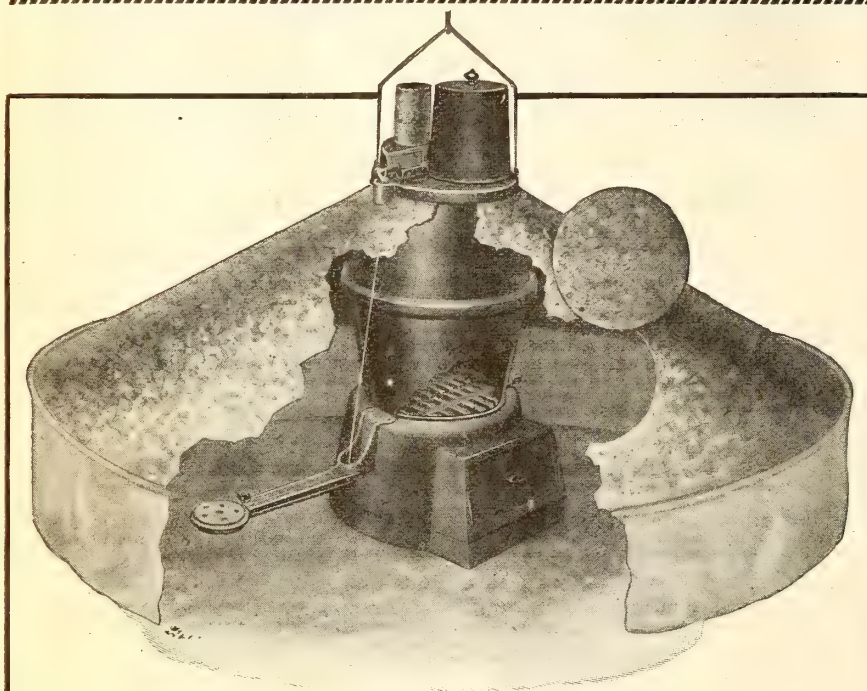

Prize Winners. We breed winners for such shows as Madison Square Garden, where we won first pen February, 1915; New York State Fair, winning the Harriman Cup for best display of Leghorns; Buffalo, winning four first prizes; and winners of high awards at Chicago, Boston, Philadelphia and St. Louis. These winners and others just as good are mated in special pens. Our special mating list gives full description of these winning birds. This booklet is of great value to anyone interested in exhibition breeding. Send for free mating list.

RANCOCAS POULTRY FARM Box 638 Browns Mills, N. J.

barred, but was stronger in type than the first. Neither of the other three males was in a class with the first two. The first hen was a good sized fowl with clear barring. The other specimens in the class had type and strong barrings, but were not as well finished as they will be a month hence. The first cockerel was a male well up to weight, of good type with strong barring and a white hackle. The second cockerel ran him a close race. The judge must have had a difficult time in selecting the other places among the twenty-five or more cockerels entered. No class brought out so distinctly the difference between the East and the West as the pullet class. The pullets exhibited by the Western breeders were in general smaller than those exhibited by the Eastern breeders with finer lines. The Eastern females in general were more rugged fowls and the Western females were trimmer in

First prize Buttercup hen, Chicago Coliseum, December, 1915, bred and exhibited by M. A. Hansen, Osage, Iowa. It is a grand specimen, being especially well marked and of fine type thruout.—F. D. R.

Buffalo Incubator Co., 465 Dewitt Street Buffalo, N.Y.

every section. The first pullet which was also the best colored female in her class, was a beautifully barred fowl with pure white hackle and the trimness of a Leghorn. The other honors in this class were determined pretty largely by the barring of the respective females. In old pens the males and females were chosen with as much care as if each was entered for honors in a single class. The cock heading first old pen had the best type of any Campine male exhibited and the females were carefully chosen so as to harmonize as nearly as possible. In young pens it was not quite so easy to follow the reasons that influenced the judge, as second and third old pen seemed to be stronger than first old pen. There were both males and females in these pens that if they had been entered in the singles would have stood excellent chances of winning individual honors. All in all the classes were the strongest ever exhibited in this country.

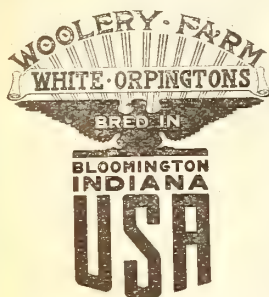

The well arranged booths occupied their usual spaces around all sides of the Coliseum and added much to the general appearance of the show thruout. Upon entering the show room at the left we found the Schwalge-Smith Co. The well-known sectional incubators manufactured by this company is fast gaining favor with poultrymen everywhere. Mr. Schwalge, in charge this

The above shows a partial view of the C. C. Shoemaker Poultry Farm and a few of the many varieties of poultry bred on this farm. This farm won twenty-three blue ribbons at the late Coliseum, Chicago, Show.

Woolery Farm's Original American Bred-to-Lay White Orpingtons Are Champions at the Chicago Coliseum

THE NATIONAL CLUB SHOW

We won First Display; 2nd, 4th and 5th Cock; 1st and 5th Hen; 3rd Cockerel; 1st and 3rd Young Pens. Championship Cup for Best Display. Cup for Three Best Cocks. Cup for Four Best Females. Cup for Two Best Young Pens, with other Club Trophies and Ribbons.

Every bird of WOOLERY FARM'S winners at the best shows in the country for the past seven generations are AMERICAN BRED-TO-LAY line bred on WOOLERY FARM by Ralph Woolery.

If you want the best winners for any show, birds that have the laying ability and individuals that will breed you winners, write us for quotations from the "Best Line of Males in the Country." We'll sell you a bird to show and win anywhere; ship him in perfect condition, at a fair price. We can send you a Cock, Hen, Cockerel, Pullet or a Pen to win as easily.

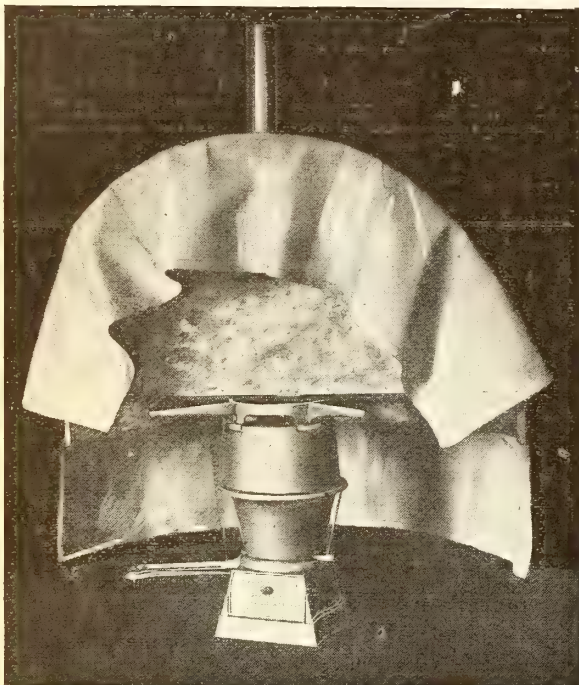

Our yards are mated NOW for the egg trade. Our mating list will be ready January 15th. WRITE FOR ONE OF THE FIRST. BIG catalog free.

WOOLERY FARM Box A BLOOMINGTON, IND.

The Dandy Coal Burning Colony Brooder

The one brooder selling at a very low price that will do all that the higher priced brooders will do.

It isn't enough to hatch your eggs—the big thing—the thing that really counts—is to save all your chicks. And you can do it with the

Dandy

Coal once in 24 hrs.
Think of the labor
saved.

Built of cast iron to
last a lifetime.

Burns coal or gas.

Increased profits.
No lost chicks.

Because we make no wild statements telling why the Dandy Brooder is better than others, don't think it is a cheap, flimsy brooder. It is far from that. We own a large commercial egg farm where all our models are tested. We use the same brooder we are offering you.

Our factory is equipped with the best up-to-date machinery run by water power. Skilled labor is cheap in this locality and our overhead expenses are small. The large saving over other manufacturers' costs goes into the construction of the brooder. Large volume of sales—small profit per sale is our idea.

\$15 Means Chick Insurance

Surely you will not let this amount stand between you and success. Write us for complete literature. We want hustling agents.

North Eastern Mfg. Company, Inc., Box A, Keeseville, N. Y.

year, was kept busy explaining the details of his well-known machine to the many poultrymen interested in this line.

Next we found the Cyphers Incubator Co. A poultry show of any size would be incomplete without an exhibit from these well-known manufacturers. Mr. Sidney Smith, the well-known manager of their Chicago branch, was in charge, being ably assisted by Mr. Risk, who is becoming well known to the poultrymen thruout the middle West. Poultry supplies of every nature was to be found at this booth and attracted much attention.

Next we visited the booth of the Candee Incubator Co., of Eastwood, N. Y., where we found one of their 1,200-egg machines, complete in every detail and ready for use. This particular machine attracted a great deal of attention and was sold very soon after the show was opened.

First prize Buff Wyandotte cockerel, Chicago, December, 1915, is of wonderful type and color. Bred and owned by Chas. Howison, Sandwich, Illinois.

The Quaker Oats Co., of Chicago, Ill., occupied a large space at the north end of the Coliseum and deserve great credit for the fine exhibit.

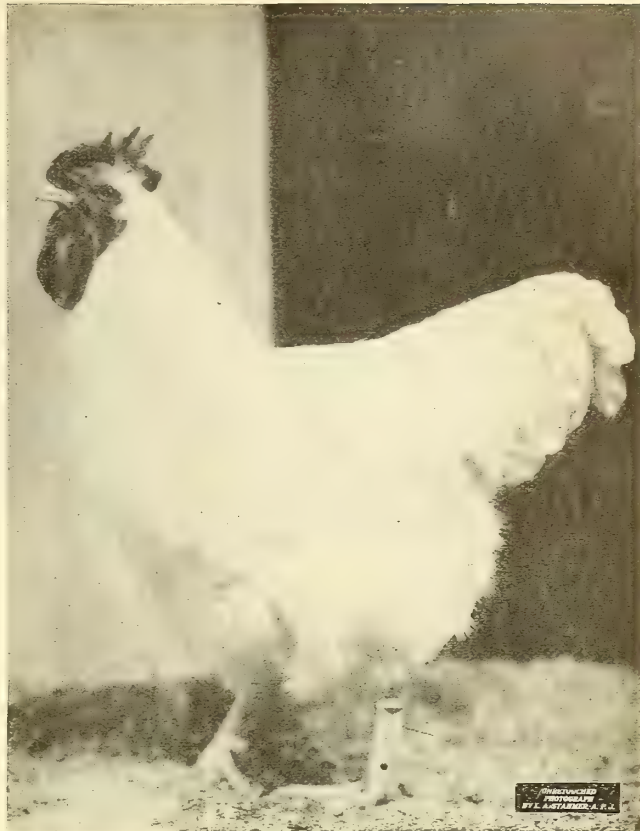

The Hall Mammoth Inc. Co., of Little Falls, N. Y., had on exhibition one of their 1,200-egg machines, as well as their well-known Colony Brooder, complete in every detail. Mr. A. Wood was kept busy demonstrating to the many interested the details and fine points of their machines.

Edwards & Loomis, of Chicago, Ill., manufacturers of the Red Comb Poultry Feed, had a very attractive booth in charge of Mr. John Plane, who is as well known to the poultrymen of the middle West as their Red Comb Feed. The booth was tastefully decorated in patriotic colors and was much admired by all who visited the show.

M. R. Jacobus, of Ridgefield, N. J., had a small and attractive booth, the first time at Chicago, showing his Patent Moisture Nest. The Prairie State Milling Co., of Chicago, Ill., had a very well-lighted and attractive booth showing to full advantage the well-known grains and feeds sold by this company. Albert Dickinson Co., of Chicago, Ill., had on exhibition a great globe of grain, being first exhibited at the World's Fair in 1893, while old in years, was much admired thruout the week. Darling &

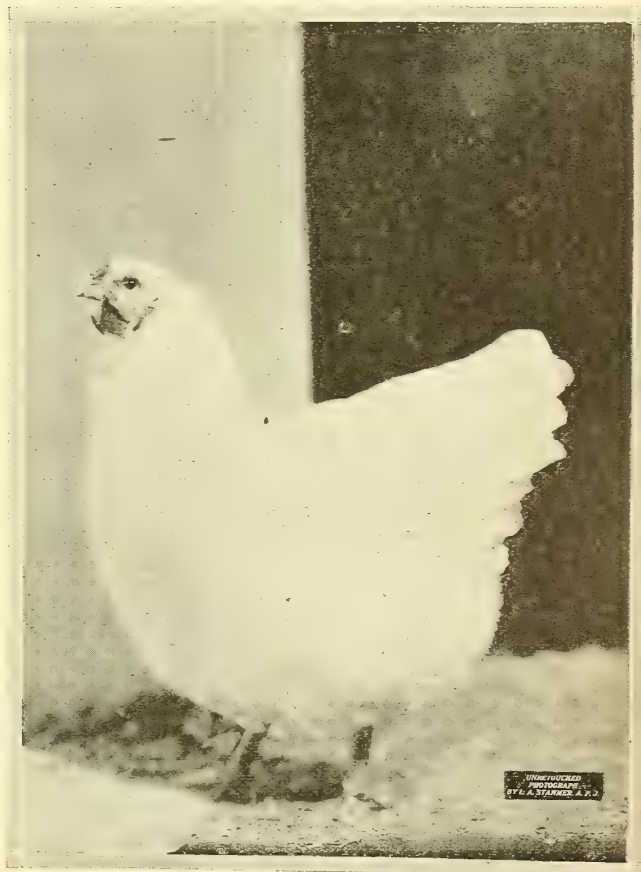

"Wonderful in type and color," was the comment of many judges at Chicago in regard to this S. C. R. I. Red cockerel. Bred and owned by Chiles & Co., Mt. Sterling, Ky.—F. D. R.

The Chicago Coliseum Show has long been a "Mecca" for White Orpington breeders. The above is the winning male in the first old pen, owned and exhibited by F. M. Gensch, Omro, Wis.—F. D. R.

E. J. Harbin, of Riverside, Ill., made his first entry of White Orpingtons at the Chicago Show. The bird shown in above picture won first at Quincy, Ill., and headed one of the winning pens at the Coliseum.—F. D. R.

A real Wyandotte in every sense of the word, is the above female, that had the honor of winning 1st in pullet class at the Chicago Coliseum Show, December, 1915. Bred and exhibited by L. J. Demberger, Stewartsville, Ind.—F. D. R.

Co., of Chicago, had on display poultry feeds and meat crisps manufactured and sold by them, creating much favor among poultrymen. The booth of J. J. Badenoch Co., of Chicago, was tastefully decorated with American flags. The fine souvenirs given away by this concern brought many people to their booth. The Vaughan Seed Co., occupied their usual space and had on exhibition the well-known Prairie State Incubator and various supplies and poultry appliances in which all poultrymen are interested.

The Axford Round Incubator Co., of Chicago, Ill., had on exhibition many of their machines, also poultry supplies sold by them. The Licene Co., of Chicago, well known to all poultrymen thruout Chicago and vicinity, were kept busy thruout the week demonstrating and showing their well-known remedies.

The well-arranged and tastefully decorated display pens have always been a feature of the Coliseum Show. Upon entering the Coliseum this year the first pen near the entrance to command our attention was that of Mrs. J. H. Harnly, of Zion City, Ill. Mrs. Harnly was fortunate in capturing this year at the World's Fair in San Francisco, Cal., Thanksgiving week, Grand Champion White Orpington male and also first pen, two of the most coveted prizes at this great world's fair. Next to the pen occupied by Mrs. Harnly we found on display first prize White Plymouth Rock male, owned by U. R. Fishel, of Hope, Ind. He is a most magnificent specimen, and to win first in the competition found this year speaks volumes of the quality of this grand bird.

The name of Halbach, of Waterford, Wis., suggests in itself the best to be found in White Plymouth Rocks. In

a large display pen near the center of the Coliseum we found his wonderful cock winning first at this year's show. This particular bird also had the honor of winning first cockerel here last year, and in the opinion of well-known judges

Second S. C. Buff Orpington cockerel, Chicago Coliseum, December, 1915. Extra fine type and grand even shade of buff thruout. Bred and owned by Jessie F. Gordon, Spring Valley, Minn.—F. D. R.

and breeders he is one of, if not the best, to be found anywhere in America. In the double display pen occupying space in the center of the show room was found the first prize S. C. White Leghorn cockerel and cock, owned and exhibited by Frank E. Hering, of South

Bend, Ind. Mr. Hering, for some years, has been a consistent winner in this particular variety. These two winning males are fine specimens and Mr. Hering deserves the honor he received.

The next two display pens were also owned by Mr. Hering, consisting of males and females of wonderful egg laying qualities with affidavit attached to the coops showing their ability along this particular line. The birds in these two pens consisted of S. C. White Leghorns and Silver Campines.

In the well-arranged and tastefully decorated pen next to those occupied by Mr. Hering we found on exhibition a fine Buff Orpington cock bird, owned and bred by A. E. Martz, of Arcadia, Ind. The many prizes won by Mr. Martz at the leading shows thruout this country has well established his Fashion Plate Strain, and the bird owned and shown by him this year at Chicago we consider a masterpiece of breeding.

In the display pen of Dr. L. E. Heasley, of Holland, Mich., was to be found two very promising cockerels of his famous "Egg Basket" strain.

The Blue Ribbon Poultry Farm, Columbus, Ind., won first prize Black Orpington cockerel in the show at San Francisco, Cal., November 18-25, 1915, and had him on display at this show.

A pen of one of the newer varieties, Blue Plymouth Rocks, was shown by U. R. Fishel and F. H. Hasselman and attracted much attention.

WHITE PLYMOUTH ROCKS.

First cock, H. W. Halbach; of wonderful type and station, magnificent carriage thruout; was first cockerel at this show last year. 2d cock, H. W. Halbach; of similar type thruout. Head not quite as good as that of first bird. 3d cock, H. W. Halbach; very beautiful

"Ask your paper jobber"

The Sefton Mfg. Co., 1329 W. 35th St., Chicago, Ill.

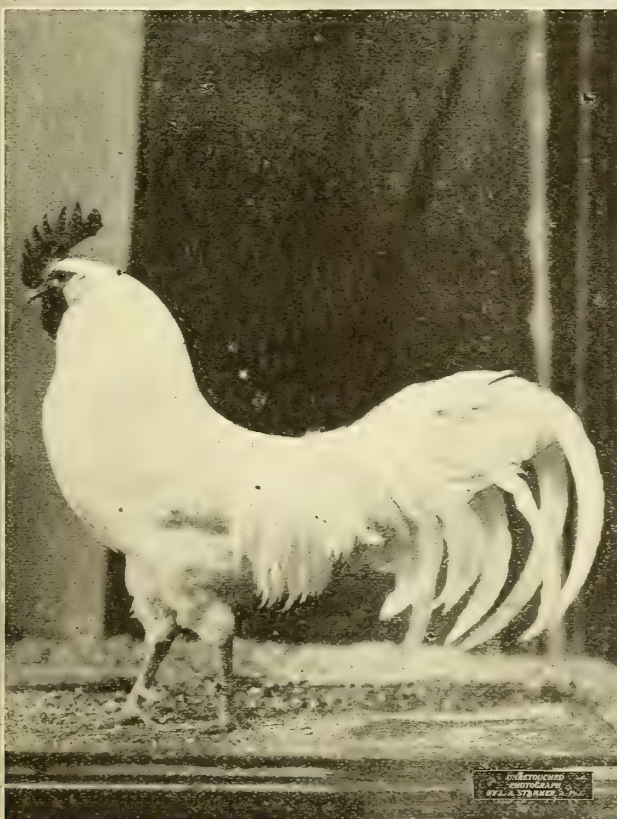

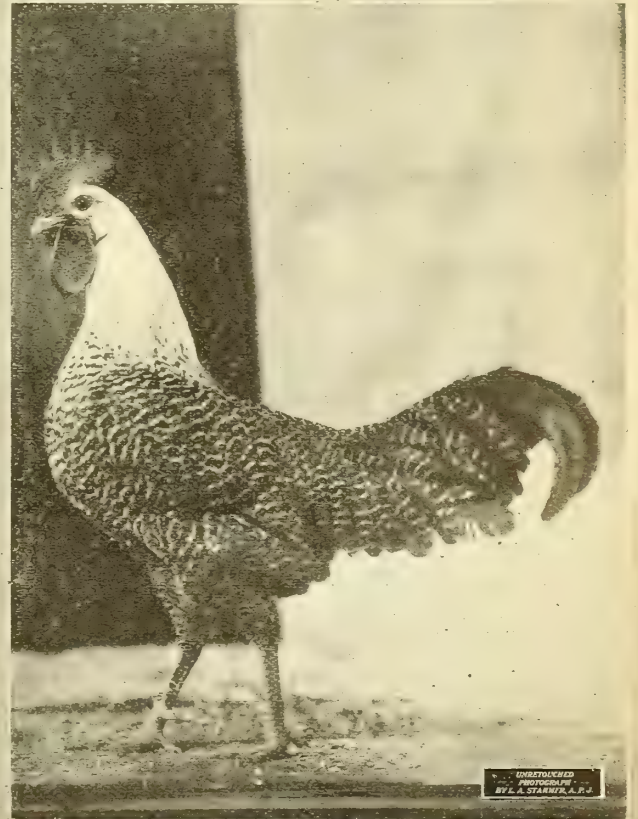

Undoubtedly as near to perfection as any bird of any variety ever produced is this the first White Plymouth Rock cock, Chicago Coliseum, December, 1915. Bred and owned by H. W. Halbach, Waterford, Wis.—F. D. R.

The first prize White Plymouth Rock Hen at Chicago, bred and owned by H. W. Halbach, Waterford, Wis., is a most beautiful specimen of the breed and one of the best we have handled for some time. L. A. S.

F. E. Hering, of South Bend, Ind., showed a great line of his White Leghorns at the recent Chicago Show. The first prize cock above was an easy winner in a hot class.—L. A. S.

The Campines exhibited at the Coliseum Show showed remarkable improvements in type and color over former exhibits here. Mr. Hering's fifth cockerel shows that so much desired modern type.

MISS BARBARA BLUM, Dept. C. New Washington, Ohio

bird with excellent head points; the only place he falls below 1st and 2d is on account of not being quite as massive a bird.

First hen, H. W. Halbach; beautiful head, broad in back, good sweep of tail, fine type. 2d hen, H. W. Halbach; similar type as first bird, losing to her on head points. 3d hen, H. W. Halbach; same type thruout; similar to 2d hen in every respect.

First cockerel, U. R. Fishel; grand, well-finished bird, beautifully shown. 2d cockerel, H. W. Halbach; extra good in back and breast, absolutely white, fine head points. 3d cockerel, H. W. Halbach; good bird thruout, losing to 2d on head points.

First, 2d and 3d prize pullets, H. W. Halbach, are so absolutely near alike we don't think it necessary to comment on them individually. The same general characteristics was shown by all three birds.

Second prize Buff Orpington cock, Chicago Coliseum, December, 1915; fine headpoints, good type, having a very fine, even shade of buff. Owned and exhibited by E. L. Bemis, Fond Du Lac, Wis.—F. D. R.

First old pen, H. W. Halbach. This pen contained four grand females, snow white and fine type, mated to a cock bird which we consider second only to the first prize cock bird. Easy winners in their class. 2d old pen, H. W. Halbach; containing four females of very even type and snow white plumage, mated to cock bird of excellent type and color. 3d old pen, U. R. Fishel; containing four snow white females mated to a male of good color and type, would ordinarily be winners in strong competition.

First young pen, H. W. Halbach; cockerel in this pen is one of the best production of the season, being almost true type and snow white. Females of this pen being very evenly matched of excellent type and color. 2d young pen, U. R. Fishel; cockerel of this pen is not as good in type as first pen cockerel, very good color and good head points, not fully finished. Females smaller than first pen females, otherwise nearly equal to first pen females. 3d young pen, H. W. Halbach; cockerel of this pen shows promise of making a wonderful bird, being very strong in type and color and head points. To him are mated four very even type females of good color.

BUFF PLYMOUTH ROCKS.

First cock, Linneman Bros.; fine type and very even color, light shade of buff, good eye and head. 2d cock, Casper Moore & Son; fine shade of buff, not as even as first bird; also losing to first in type. 3d cock, John J. Cheffer; very rich buff color, smaller than first bird, lacks in breast shape. First hen, Casper Moore & Son; unusual in type, rather light in color, but even, fine eye and head. 2d hen, T. H. Lucas; rich golden buff, losing to first hen in type, head points and color of eye. 3d hen, T. H. Lucas; losing to first and second in color and type, little undersize.

First cockerel, Casper Moore & Son; fine type and color, trifle dark on wings; easy winner in this class. 2d cockerel, Rothgeb Bros.; bird of good type and color, not fully matured, dark in wing bar same as first bird. 3d cockerel, Marion H. Culver; of fine type, rather immature; losing to first and second in type.

First pullet, Rothgeb Bros.; excellent in type and color, fair head and comb. 2d—pullet, Casper Moore & Son; not as good type as first bird, practically same color, rather short on legs. 3d pullet, C. H. Barnes; losing to first and second on type, color too dark, rather shafty.

First old pen, C. H. Barnes; cock bird of rich golden buff, good type, mated with four rather dark females of very even shade of buff.

PARTRIDGE PLYMOUTH ROCKS.

First cock, J. L. Staller; good color and type, lacking a trifle in breast shape. 2d—cock, Ed. J. Wagner; losing to first bird in both color and type; fine head and good eye. 3d cock, Meadow Lawn Poultry Yards; fine color and type, unfinished, not in show condition.

First hen, Meadow Lawn Poultry Yards; wonderful color thruout, rather short on legs, fair type, trifle small. 2d hen, P. J. Olle; lighter in color, not quite as well marked as first hen. 3d hen, P. J. Olle; not as well marked as second hen, practically same type, comb not as good.

First, 2d and 3d cockerels, Meadow Lawn Poultry Yards; 1st bird outstanding in every way to others in the class, shows every indication of making a wonderful bird. 2d bird lacking in color, not as good type, trifle shy on breast shape. 3d bird losing to first and second in both type and color.

First, 2d and 3d pullet, Meadow Lawn Poultry Yards; 1st bird rather large in comb, wonderful type and color. 2d bird losing to 1st in type, smaller and not in best of condition. 3d resembles second very much, lacking in type and breast shape.

First old pen, J. W. Hunt & Son; cock bird of this pen shows very good Plymouth Rock type, fine color; females finely marked and good type. 2d old pen, P. J. Olle; cock bird of this pen not as good in type as first pen cock bird; females not as even in size or type.

First young pen, Meadow Lawn Poultry Yards; excellent male bird, promise of developing into a very good cock bird, being of good Rock type, not fully finished; females very well marked and of good type. 2d young pen, P. J. Olle; cockerel of this pen not as good in type as first pen cockerel; females of good type, not as even in color as first pen females. 3d young pen, J. W. Hunt &

WHITE ORPINGTON
FIRST PRIZE COCKEREL ~ BUFFALO, 1915
bred and owned by
ALDRICH-POULTRY-FARM ~ COLUMBUS, OHIO

A most promising bird from every standpoint is this wonderful male, winning first at the great Buffalo Show, and only one of the many annually bred by this well known farm.—F. D. R.

WHITE ORPINGTON
FIRST PRIZE COCKEREL ~ ALLENTOWN, 1915
bred and owned by
ALDRICH-POULTRY-FARM ~ COLUMBUS, OHIO

All breeders everywhere are familiar with the wonderful classes seen annually at the great Allentown Fair. The above picture shows to good advantage the first prize W. Orpington cockerel.—F. D. R.

White Houdan hen from first prize pen at Chicago. This new breed attracted great attention. The above hen shows fine breed type and a most beautiful crest. M. L. Starks, of Starks, Wis., is the owner.—L. A. S.

The above picture shows one of the S. C. White Orpington males owned and bred by Rose City Poultry Yards, New Castle, Ind., is a large, massive bird of good type and color.—F. D. R.

Son; cockerel of this pen not as matured nor of as good type as either first or second pen cockerels; females very young but of good type and color.

COLUMBIAN PLYMOUTH ROCKS.

First cock, Wm. B. Hoeschler; fair type and color, rather immature.

First hen, Wm. B. Hoeschler; good type, fair color.

First old pen, Erwin H. Spencer; cock of good type and color, mated to four females of good type and fairly good color.

First young pen, Wm. J. Becklenberg; cockerel of good type, rather pinched in breast and tail, shows good markings thruout, mated to four females of good type and fairly good color. 2d young pen, Erwin H. Spencer; cockerel smaller than first pen cockerel, not as good in type or color; females not as good type or color as first pen females. 3d young pen, Wm. J. Becklenberg; cockerel of this pen good size, fair type, lacking in breast shape, tail trifle too high, hackle feathers not as well striped as male bird in first pen, mated to four females nearly equal of females of second pen.

BLUE PLYMOUTH ROCKS.

First and 2d cock, 1st and 2d hens, 1st and 2d cockerels and 1st and 2d pullets, Fishel & Hasselman; this is the first time this variety was exhibited at Chicago; fairly good type and color was shown by these birds, considering the fact they are a new creation.

BARRED PLYMOUTH ROCKS.

First cock, John W. Yant; excellent in type and color, fine narrow barring, little unfinished. 2d cock, Geo. Dyson; very good color and type losing to 1st bird in size. 3d cock, John McPherson; fine color and size; losing to 1st and 2d bird in type.

First hen, Howard Sears; fine type, very unusual color, good head points. 2d hen, Arthur Irwine; fine in type and color; nearly as good as first bird. 3d hen, W. D. Holterman; very nicely barred; losing to 1st and 2d in type.

First cockerel, Geo. Dyson; fine head points and eye, wonderful barring, good type, rather immature. 2d cockerel, John McPherson; fine size and type, narrow barring, four point comb, good texture. 3d cockerel, Fred Bowers; wonderful barring; losing to 1st and 2d in type.

First pullet, G. A. Walker; wonderful bird both in type and color, being easy winner in her class. 2d pullet, John W. Yant; very fine color; losing to 1st bird in type. 3d pullet, Dell George; rather immature; losing to 1st and 2d in both type and color.

First cockerel-bred hen, Geo. Dyson; especially good in both type and color, outstanding in her class. 2d cockerel-bred hen, W. E. Cowan; fine colored bird; losing to first in type. 3d cockerel-bred hen, Arthur Irwine; bird of fine type and color, barring being not as sharply defined as in 1st and 2d.

First cockerel-bred pullet, D. M.

Hammond; rather immature, but promise of being wonderful type, good head and eye. 2d cockerel-bred pullet, D. M. Hammond; good colored bird; losing to 1st in type. 3d cockerel-bred pullet, W. D. Holterman; good type and color, lacking a trifle in breast shape.

First pullet-bred cock, Mrs. Chas. E. Popham; easy winner in his class, shows wonderful type and color, together with excellent head points. 2d pullet-bred cock, D. F. Palmer & Son; very good color, not as good type as 1st bird. 3d pullet-bred cock, Geo. E. Girard; losing to 1st and 2d in both type and color.

First pullet-bred cockerel, Mrs. Chas. E. Popham; showing wonderful barring and excellent type. 2d pullet-bred cockerel, D. F. Palmer & Son; wonderful type and color; being a close second. 3d pullet-bred cockerel, L. S. Heim;

The first prize Barred Rock pullet at the Chicago Show showed excellent type and color, an easy winner in her class. Bred and owned by G. A. Walker, Polo, Ill.

bird of good type and color, trifle unfinished.

First exhibition pen, John W. Yant; exceptionally grand pen thruout; male bird of fine type and color, good head points; females well mated and are much of same type and color of barring. 2d exhibition pen, John W. Yant; a cockerel of fine Rock type, good head points, very fine and even barring thruout, mated to four pullets equally good in type and color. 3d exhibition pen, G. A. Walker; a cockerel and four pullets of good type and color, type not being quite equal to 1st pen birds; birds not fully finished; females not as well balanced as in 1st pen.

First cockerel-bred pen, W. D. Holterman; cockerel and four pullets of exceptional quality, showing fine type thruout, barring extremely fine and even; male bird not fully finished. 2d cockerel-bred pen, Hicks Burkett; cockerel of good Rock type, rather small, mated to four pullets of good type and color. 3d cockerel-bred pen, Geo. Dyson; this pen showed very fine quality thruout, male being very young and immature, altho evenly barred; pullets of good type but not as well barred as females of pen one and two.

First pullet-bred pen, John W. Yant; male bird of this pen of very fine type and even barring with good head points, mated to four very evenly matched females of very fine type and color. 2d

PALACE WINNERS

Monmouth birds made notable wins at the Palace. Our grand S. C. Buff Leghorns took

1st and 2nd Cock; 2nd Hen; 1st and 2nd Cockerel; 2nd Pullet; 1st Pen; Color Special and Best Display, at this big New York show. A splendid record! Means a lot to our customers. In color, type and quality, our

Monmouth S. C. Buff Leghorns

are exceptional—the best we ever had on our farms. Our S. C. White Leghorns are bred to the same standard.

We are ready to supply some fine birds that should win for you at any of the leading shows. They are bred for size and heavy laying qualities, too. Select now from our crack breeders for this season's breeding pens. It will pay you to buy some of our wonderful "20th Century Dual Purpose Fowls." Write today for prices and circulars.

MONMOUTH FARMS

John Lockwood, Supt.

Box 23, FRENEAU, NEW JERSEY

A. & E. Tarbox, Yorkville, Ill., are two of the oldest breeders of Silver Wyandottes in this country. The first prize pullet at Chicago and San Francisco shows the wonderful advancement in type and color that has been made in this breed.—L. A. S.

The above picture of the first Buckeye cockerel at Chicago, shows to good advantage the fine type of the bird. We are willing to vouch for its excellent color. Mr. Elton C. Mahon, Norwood, Tenn., the owner, showed a great lot of birds.—L. A. S.

Buff Orpington male shown in one of the winning old pens, Chicago Coliseum, December, 1915, especially good type and color. Bred and owned by A. C. Williams, Ravenna, Ohio.—F. D. R.

Chas. G. Pape, Fort Wayne, Ind., as usual won a number of firsts with his Black Minorcas. The first prize cock is a bird of fine station and great color, winning easily in a select class.—L. A. S.

pullet-bred pen, G. A. Walker; male of this pen not the equal of male in first pen in type, altho very good color in all sections; females of good type and barring thruout. 3d pullet-bred pen, D. F. Palmer & Son, contained cockerel and four pullets of good type and color, not as large and well matched as birds in 1st and 2d pens.

SILVER WYANDOTTES.

First cock, A. & E. Tarbox; of wonderful color and fair type, good head and comb. 2d cock, A. & E. Tarbox; losing to 1st bird in color, not as good in head. 3d cock, Ira C. Keller; losing to 1st and 2d in color, being sort of brassy across the back.

First hen, A. & E. Tarbox; wonderful color and good type, showing no trace of mossiness in any section. 2d hen, Ira C. Keller; a close 2d, lacing being a trifle too heavy, not as good in comb. 3d hen, A. & E. Tarbox; of good shape and lacing, contrast in lacing not being as sharp as in 1st and 2d bird.

First cockerel, A. & E. Tarbox; nicely turned bird, showing wonderful breast lacing, good Wyandotte type thruout. 2d cockerel, Ira C. Keller; long in body, lacks a little in breast shape. 3d cockerel, A. & E. Tarbox; too high on legs, hackle unfinished.

First pullet, A. & E. Tarbox; fine shape and color, showing wonderful open lacing. 2d pullet, A. & E. Tarbox; not as good in type as first bird, also lacing heavier. 3d pullet, Ira C. Keller; losing to 1st and 2d in both type and color, not in show condition.

First old pen, A. & E. Tarbox; contained cock and four hens of grand quality, showing wonderful Wyandotte type and excellent color thruout.

First young pen, A. & E. Tarbox; male of this pen has very good Wyandotte type, legs a trifle long, good color thruout, mated to four pullets of good Wyandotte type and excellent lacing.

GOLDEN WYANDOTTES.

First cock, F. L. Clausen; fine type and color, one of the best cock birds shown at the Coliseum in recent years. 2d cock, Ira C. Keller; very large bird, fine color, good type, tail carriage trifle high, good head and comb. 3d cock, Frank Ward; not as good as 1st and 2d in either type or color, eye trifle light.

First hen, F. L. Clausen; well lacked bird, showing good type, lacking a little in back shape. 2d hen, D. G. Anthony; smaller bird of excellent color, fair type, being too long in back. 3d hen, Chas. D. Love; too high on legs, very good body shape, fairly well laced.

First cockerel, D. G. Anthony; fairly good color, good head, long on legs, tail carriage too high. 2d cockerel, Monroe H. Wanning; good color and fair type, close 2d. 3d cockerel, Chas. D. Love; well laced bird, not as good type as 1st and 2d birds.

First pullet, W. M. Hare & Son; wonderful lacing, also excellent type, good head points. 2d pullet, Chas. D. Love; good head, not very good color. 3d pullet, D. G. Anthony; losing to 1st and 2d in type and color.

First young pen, Chas. D. Love; male

of good type, rather narrow breast, carrying tail trifle high, mated to four very even pullets of fair type and excellent color. 2d young pen, D. G. Anthony; male bird not equal of 1st pen male bird in any section; females not as well developed, but well laced.

WHITE WYANDOTTES.

First cock, F. M. Eakin; wonderful type and fine head and comb, lacks a trifle in breast shape. 2d cock, Robt. W. Williams; not as good type as first bird, not as good in comb, being too heavy. 3d cock, L. J. Demberger; not as good in type as 1st and 2d birds.

First hen, L. J. Demberger; good color, wonderful type and excellent head points. 2d hen, F. M. Eakin; fine type and good head, little Cochiny in fluff feathering. 3d hen, F. M. Eakin; good type and color, not quite as broad in back shape as 1st and 2d winners.

First cockerel, F. M. Eakin; one of

One of the winning Black Orpington pullets exhibited by Jessie F. Gordon, Spring Valley, Minn. Extra fine in type and color. F. D. R.

the stellar birds of the whole show; excellent type, fine head points, bright eyes and yellow legs. 2d cockerel, F. M. Eakin; would be an easy winner in most classes, also good type and head points. 3d cockerel, F. M. Eakin; not as good bird in type as 1st and 2d, lacking a trifle in breast shape.

First pullet, L. J. Demberger; wonderful type with excellent head points. 2d pullet, Chas. W. Prei; large bird of good type and color, fluff feathering being a little too loose. 3d pullet, Frank E. Hering; bird of wonderful color, not as good in type as 1st and 2d birds.

First old pen, Carrington Jones; consisting of cock and four hens of wonderful type and snow white color. 2d old pen, A. J. Shannon; male of this pen not as good in type as 1st pen cock; hens not as well matched. 3d old pen, J. H. Powers; cock bird of this pen of good type and fair color; females not as good as 1st and 2d pen in both type and color.

First young pen, L. J. Demberger; contained cockerel of true Wyandotte type, snow white color, mated to four females of very uniform type and excellent color. 2d young pen, F. M. Eakin; very nearly as good in type and color as 1st pen; a close second. 3d

Readers Experience Department

The New Single Comb Red Leghorn.

THERE is always something new in the poultry world. Leghorns have made their appearance in nearly every conceivable color and comb, but the latest addition to the great Leghorn family is the Single Comb Red Leghorn. This new variety should not be confused with the Red Pyle Leghorn, as it is entirely different. The Single Comb Red Leghorn is like the Brown, White, Buff and Black Leghorn as to shape and size, but in color they are a deep brilliant red much the same as are the best Rhode Island Reds, and they also have similar markings. Of all the new breeds we have observed we have seen none which have so many reasons for becoming world-wide popular as has this latest candidate for public approval.

Their lineage is quite modern, as they are the result of systematic crossing of Red Sussex, Rhode Island Reds and Single Comb Brown Leghorns. A glance at this line-up of ancestry will give the reader a very good idea of their general characteristics.

From the Leghorns they inherit their laying characteristics. From the Sussex they derive an extremely hardy constitution, while to the Rhode Island Reds they are indebted for the beautiful plumage so characteristic of the breed.

They are layers of large white eggs,

and are consistent in their laying habits, many of them laying during the moulting period.

When it is considered that they are less than five years old as a breed, the color development is really remarkable. By this we mean both surface and under-color, and in view of this, I do not hesitate to say that five years from now they will be attracting the same widespread attention as do the best Rhode Island Reds today.

At this writing, according to all available information, there are less than 200 head of Single Comb Red Leghorns in existence. These are closely held by breeders who fully realize the future greatness of the breed and as a natural consequence they will reach a high degree of perfection more rapidly than has been the case with other breeds.

At present the demand for stock and eggs is far greater than the supply and will be for several years to come.

Poultry lovers will do well to investigate this remarkable new breed which combines a color and type which heretofore have never been found on one fowl.

K. K. WELDAY.

Seville, Ohio.

S. C. Buff Leghorns.

I am greatly interested in the S. C. Buff Leghorns and have been breeding them for several years and find but

one defect in the breed. That is the small size of the mature bird, tho this is claimed by some to be an advantage, because they cost less to keep.

The eggs vary in color from pure white to a creamy tint and average from eighteen to twenty ounces per dozen. They are well shaped, the only difference in size being that the hen lays a larger egg than the pullet.

My hatching average with this breed has been between 80 and 85 per cent.

When first hatched the chicks are large, but they appear smaller after the feathers begin to grow. Chicks with black or brown spots on their heads will have black in their wing and tail feathers. This can always be relied upon. By the time they are half grown, those with wry or high tails, poor under-color or with too dark or light surface color can readily be distinguished and sold to market.

Nearly all Leghorns are apt to be wild, so they should not be alarmed more than is necessary while chicks or as adult fowls. They are fine "watch dogs" against thieves, as they set up a terrible racket if disturbed at night.

The Standard calls for a clear buff, and that, you must have to breed good birds. Either black or white in under-color or on the surface is a defect, and of the two, black is less desirable than white. A bird that is either too light

The advertisement for Mapleside Poultry Farm includes several photographs: a long white building with a dark roof, a smaller white building with a dark roof, a large white building with a dark roof, a large white building with a dark roof, a large white building with a dark roof, a large white building with a dark roof, a large white building with a dark roof, a large white building with a dark roof, a large white building with a dark roof, a large white building with a dark roof. A central portrait of a man in a suit and tie is also featured. The text 'MAPLESIDE POULTRY FARM' is prominently displayed in a stylized font, with 'O'F MITTENDORFF PROP.' and 'LINCOLN ILL' below it. Decorative elements include a large circular frame with a landscape scene and two large, stylized, striped, wing-like shapes on either side of the central portrait.

This is a farm that is making good by specializing in Barred Plymouth Rocks for heavy egg production. Have produced individual hens with trap-nest records up to 290 eggs in 364 consecutive days. The trade of this farm extends to all parts of the world,

or too dark will not produce buff-colored chicks.

In preparing Buffs for the show room, I do not wash them, but use a little sweet oil and alcohol and rub them down with it using a clean cloth. It gives the feathers a nice glossy appearance, but should be used sparingly, as too much would gum up the plumage. I also use sweet oil and alcohol on the comb, wattles, bill and shanks. If properly applied it gives the birds a clean, well-kept appearance.

FLOYD E. GARLAND.

Open Front the Best.

One of the best of the new methods in poultry keeping is the open-front house. My experience with it, embraces four different houses in three different towns and extends over a period of half a dozen years. Its success has been very pleasing in every case. My open fronts have not a cur-

tain, there being nothing in the front (southern side) of the house but wire netting and the uprights which support the roof timbers and the netting. With this type house, I use no outdoor run for my fowls. There is an earth floor which is kept covered with hay seeds, and loft sweepings, from a near-by farm. With the birds kept on it at all times, this covering will soon become foul and consequently is frequently renewed. On cleaning out, the old litter is used to make a compost heap and later removed to the garden, where it does good work. I have kept Leghorns and Campines in this manner and not a case of frozen comb to date. The birds are as full of song and activity as one could wish. The egg yield is remarkably good thru all the cold weather. Another point to consider in town flocks like mine, is that the birds so housed are not an annoyance to neighbors by scratching up lawns and gardens. Any little back yard big enough for an open

front house may have a flock of fowls kept in this way. But the house must have an always open front.
Dover, N. J. C. H. V.

A Word for the White Rocks.

For more than fourteen years I have been breeding White Plymouth Rocks and find they fill all requirements for an all around fowl. They do equally well confined to small quarters or on range.

In mating, I use single matings both for pullets and for cockerels. The color of the little chicks varies from pure white to quite a smoky or smut color, but I find many times the darker the little chick the whiter the young bird. The creamy ones nearly always develop into the best birds of the flock and invariably moult out pure white the second year.

As layers, the White Rocks are hard to beat. I have had a flock record of

Homestead Silver Campines The Vigorous Strain

AT THE PALACE, NEW YORK CITY, DECEMBER, 1915

At the largest winter show ever held in America and the first big winter show of the season.

New York City, New York

IF you will use the same careful discrimination in selecting your New York hotel that you use in selecting your poultry, we know you will be a guest of the BRESLIN when you attend the Poultry Show.

Write for Lately Revised Moderate Rates

200 eggs per bird for the last three years and better than that in one or more small pens.

It is not difficult to get pullets to weigh five pounds at five months and up to six, and six and one-half, at six months of age.

I sometimes find that in some of my best birds there will be small grayish specks on a feather, but this almost always moults out after the first year.

I trap nest all pullets the first year and select for breeding birds only such as have proved themselves good layers and have shown no sign of bodily weakness. Only birds of the best health and vigor, with large compact bodies, medium short shanks, closely folded wings, fine upright carriage and active wide-awake appearance should be kept over for breeders. O. H. LEON.
Clarksville, Pa.

Marketing Poultry.

One of the most important things for poultry keepers everywhere to realize is the value to the industry of well-marketed poultry. An examination of the greater part of the poultry that is for sale in city or town markets all over the country will convince anyone of the thousands of dollars that are thrown away by poor marketing. That the greater part of such poultry is not used for fertilizer rather than food, is amazing. It is certainly not fit for human consumption and there is no more certain way to prevent a constantly increasing demand for poultry in the market, than that of poorly dressed, half starved, over-ripe poultry being on sale in the markets, as it is today.

It is the exception rather than the rule to find good, plump, healthy looking, well-dressed poultry for sale in the markets. A walk thru several markets in two large Eastern cities just before Thanksgiving found hundreds of scrawny, scalded, over-ripe fowls displayed for sale. That people buy these birds for food at any price is the finest argument in the world for the demand that might easily be created for good clean wholesome poultry.

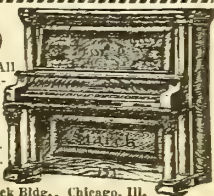

The best way to create such a demand is for every poultry keeper to sell only such fowls to market as are fit to be marketed and to see to it, that the birds are starved a day or more before killing, that they are dry picked, well bled and thoroughly chilled. If sold alive, try to fatten them up a little before selling. So many dressed poultry skeletons on sale in the markets speaks bad for the poultry raisers. If there is any way that the poultry business can boost itself, it is by putting out a better product for food consumption. There is a chance for the poultry associations to do great good in this field.

Last season at some of the shows where dressed poultry was on exhibition, I overheard a number of visitors remarking that no poultry such as that on exhibition was ever offered for sale in the markets and one gentleman went to great trouble to see if he could purchase a part of the exhibit.

A Department for the Exchange of Helpful Poultry Experiences

CHOOSING A CHICKEN

Even if a Paternal Government Spends Thousands of Dollars Getting Poultry Marketed in First-Class Condition, the Women of the Country Must Back Up the Work by Discriminating Buying or the Whole Propaganda Will Fail.

By A. M. WILSON.

FIRSTLY, Sister Woman, you cannot choose a chicken over the telephone. A certain keeper in a market store in a fashionable section of Washington, recently remarked with scorn that he did not care to cater to middle class women who came around poking their fingers into his chickens! Very disconcerting indeed, especially if there is a discerning eye back of the "poke" and the market man has some respectable but ancient hens to unload, or some gay young broilers that have dallied too long in storage, on his hands.

You cannot expect anyone to take more interest in your own business than you take yourself. Even if a paternal government spends thousands of dollars and specially trained men and women devote their time to seeing that poultry gets on the market in first-class condition, after sanitary skillful handling all along the line, the women of the country must back up the work by discriminating buying, or the whole propaganda will fail. But the woman who conscientiously and personally inspects and selects her own supplies, cannot do much better than an indolent sister, unless she knows a good chicken when she sees one. And this brings us down to

our text: What and When and Why is a Good Chicken?

To begin at the very beginning, heredity and environment both play their part, just as they do with humans. In other words, "the breed counts." There are certain varieties that have the plump breast, rounded legs, and well-meated backs which means both pleasurable and economical eating, while on the other

been studying for the past eight years. After the chicken is bred, and fed, come the questions of killing, picking, cooling, transporting and marketing, the mooted points of cold storage and the question of whether it be sold drawn or undrawn.

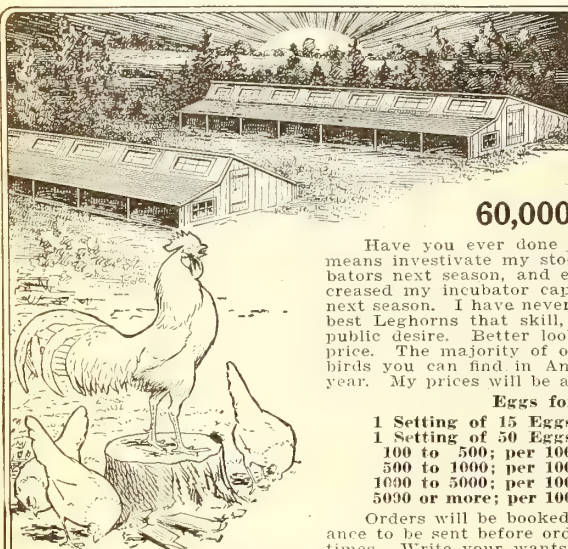

The old brutal and clumsy methods of wringing the neck of a chicken or even chopping off its head with an ax,

hand, the "rangers" or nervous dispositioned birds cannot be expected to put on flesh in the proper way.

What are the steps necessary to insure wholesomeness and quality in dressed poultry? This is the problem that the Food Research Laboratory of the Department of Agriculture has

were quite as hard on the consumer as on the chicken itself. Such a bird is not properly bled, and if blood remains in the flesh, it is very apt to become bitter in a very short time. You can tell a chicken that has been improperly bled by its discolored neck, red blotches on the wings and hips, and the quantity

"SUNLIGHT" POULTRY FARM S.C.W. LEGHORNS

Greatest Known Layers. (D. W. Young) Strain
60,000 S. C. White Leghorn Baby Chicks For Sale

Have you ever done any business with the Sunlight Poultry Farm? If not, you should by all means investigate my stock and my business methods. I shall operate two Candee Mammoth Incubators next season, and every egg used will be from my birds here on the farm. Again I have increased my incubator capacity 6,600 more and know that I shall be taxed to the limit for months next season. I have never yet produced half enough chicks to supply the demand. I am breeding the best Leghorns that skill, labor, capital and experience can produce—such Leghorns as 98% of the public desire. Better looking, better laying and stronger stock cannot be bought anywhere at any price. The majority of our customers raise almost every chick, as they are the strongest strain of birds you can find in America today. My prices for this year are no higher than they were last year. My prices will be as follows:

Eggs for Hatching

Artificial incubators cost four times this amount and do not give half such satisfactory results. Remember the Gov't is behind my machine—fully covered by patents. No freight to pay. Agents wanted. To reach the MILLION mark in 1916, we will send you a SPECIAL INTRODUCTORY OFFER with our FREE CATALOG

NATURAL HEN INCUBATOR CO., 1349 Constance Street, Dept. 4 Los Angeles, Cal.

Poultry health insured

Use Carbo Units to support your poultry yard fence. They are mite-proof steel—do not harbor nor breed vermin, dirt, filth or disease. No wood to rot or gather dampness.

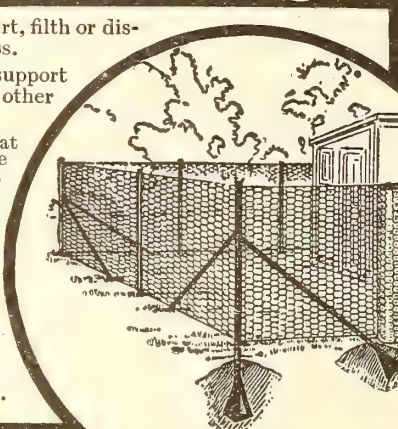

With heavier style Carbo Units you can support farm sheds, chicken houses, garage, or other buildings.

Three Carbo Units make a fence corner that will outlast the fencing wire. No concrete used, as Carbo Units are set in earth only, sub-soil anchored and earth cushioned. Never buckle at the ground line or shear off. Carbo Units are less expensive than wood posts, concrete, or semi-steel posts—occupy 1-10th the space of wood posts. Are easy to set: merely bore a hole and set in unit; tamp earth, and Unit is there to stay. Life is five to ten times that of wood.

For supporting fencing between terminals, use Carbo Spring Supports. Write for Catalog 16, which tells about Carbo Units, and their 101 uses about the farm.

of blood in the liver and viscera. A well-bled bird is of an even yellow or white color over the entire body. The sanitary, humane and gastronomic way to kill a chicken is to sever the jugular vein while the bird is suspended by the feet, at the same time braining, by thrusting the knife along the middle line of the roof of the mouth. This method of killing not only insures proper bleeding but the braining loosens the feathers and makes dry picking easier. Those who are interested in this important detail, should send to the Department of Agriculture for Circular 61 of the Bureau of Chemistry. Then how should the feathers be removed? The indignation of an expert, over a chicken that has been lazily scalded, instead of having been carefully dry picked, is something dreadful to witness. This appears to be one of the worst crimes that has to date been discovered in the poultry world. It seems that scalding a chicken alters the flavor of the layer of fat just under the skin, soaks out in the water the flavors due to the nitrogenous extractives, and adds from 8 to 17 per cent of water in exchange for these losses. Incidentally the consumer pays for this water at chicken prices. Moreover, after a bird has been scalded, it is very difficult to tell anything about its quality—so the high-priced poultry is dry picked, and the poor stuff is naturally scalded as a disguise, so to speak, which is another reason for calling loudly for dry-picked chickens.

If the bird has been dry picked, the skin is translucent, especially along the sides and shows the pink muscles underneath, the fat on the breast is yellower than in other places, the skin is soft and flexible and only a few veins can be seen. The skin of a scalded chicken has a smooth, tight stretched appearance, and it is difficult to bend the legs back—often the skin is rubbed. Scalding is the easiest method, and until the housewife demands dry-picked fowls, they will not be plentiful in the market—human nature being the same among poultry dealers as in other trades and professions. It rests with the buyer to create the demand and this cannot be done by buying on prejudice and guess-work instead of on a basis of knowledge.

Imagine this picture—it is a true "movie." Scene—A Retailer's Shop Anywhere. Characters—Retailer, Housewife and Dr. Pennington, poultry expert, incognito.

The prospective buyer is offered a prize, young, milk-fed, dry-picked rooster. Scorn and suspicion are depicted on the face of the woman. "No. I don't want that bird. It is diseased and I'll bet it died. Show me a bird that was killed and is fit." Dealer presents a scrawny, scalded chicken which is accepted with enthusiasm as being all right, because it looks "as usual" while the plump, flexible-skinned,

soft-fleshed, choice bird looked too good to be true.

Curtain, while the scientific investigator who has spent much time and money and expert labor in getting the dry-picked chickens on the market, "fades out"—wondering meanwhile why anyone should go to the trouble of dry-picking chickens if the women do not know enough to buy them!

This is creating the wrong kind of a demand and this is where the housekeeper's responsibility for the food supply begins.

The next important step is chilling the fowl as soon as it is picked. This ranks with dry picking in importance, when it comes to providing a wholesome and tasty product. Indeed, Dr. Pennington holds that failure to remove the body heat by cool, dry air (30°-35° F.) is more accountable than any other one factor for spoilage, bad appearance and loss of flavor. It takes twenty-four hours to cool a large chicken properly, and about eighteen hours for a small one. No matter how proud the ancestry of a fowl, or how tenderly it has been reared, it can be ruined for the table both by scalding it and by failing to cool it properly. Think of the effect of the blood remaining in the tissues and veins and the animal heat being retained in the carcass and see how obvious this is.

Then we come to packing for transportation. Wet packing in ice is an abomination—more of the nutrients are soaked out and the flesh is made soft and mushy, so that it readily decomposes. Moreover, the water from the melting ice soon becomes filthy beyond description. There is nothing to be said in favor of the chicken packed in ice, whatever differences of opinion may exist on other points. A glance at barrelled chickens and another at those packed in individual cartons or small boxes (twelve to a box) transported in refrigerator cars and kept cold but dry settles this question without expert testimony, tho that is not lacking. When the housewife says, "No, I will not have it," the wet packed chicken will disappear as if by magic. For the housewife's word will be more powerful than any law or expert testimony.

Drawn or undrawn is a question that has been hotly debated. On general principles keeping a fowl undrawn is rather a repugnant idea, and some states have legislated against it. But along comes an expert with a disconcerting array of facts. In drawing a fowl, under ordinary commercial conditions, it is practically impossible to prevent breaking the intestines and smearing the body cavity with the contents. This fact, together with the breaking of the skin and exposure to the air tends decidedly to promote decomposition. Careful comparative experiments with drawn or undrawn poultry have shown that the rate of decomposition, as evidenced by bacterial and chemical changes, as well as by visual inspection, is far greater in the case of the drawn fowl.

The best procedure, therefore, is to starve the chicken for not less than twenty-four hours before killing, giving it only water to drink, and to keep the carcass unopened until it is ready for delivery.

The entrails in a good chicken should be almost empty, round, firm in texture, and showing little red veins here and there. If the animal heat was not removed quickly and completely, the

87 Birds in Natural Colors for only 10c

Have you a photograph in natural colors of your favorite variety of bird

?

If you haven't, this is your opportunity. We have a few hundred sets of pictures of different varieties of fowls. These pictures are printed in natural colors on heavy enamel paper, showing the bird true to life. The size of the picture is 7x10; each picture is arranged in panels, as follows:

- No. 1—Light and Dark Brahmans, White Partridge and Black Cochins, S. C. Buff, Brown, White and Black Leghorns, Silver Duckwing Leghorns, White and Black Langshans.
- No. 2—White, Barred and Buff Rocks, Buff, Silver, White, Partridge, Silver Penciled, Columbian and Golden Wyandottes, Black and Mottled Javas, Rhode Island Reds.
- No. 3—Black and White Minorcas, White Faced Black Spanish, Anconas, Blue Andalusians, Buff Orpingtons, Red Caps, White, Silver Gray and Colored Dorkings, White Crested Black, Bearded Silver, Bearded Golden Polish.
- No. 4—Golden Spangled, Silver Spangled, Black, Golden Penciled, Silver Penciled Hamburgs, Houdans, Red Pyle, Brown Red, Black Breasted Red Games, Silver Duckwings, Cornish Indians, Black Breasted Red Malays.
- No. 5—Golden Sebright, Silver Sebright, Buff Laced Polish, Black Cochins, Partridge Cochins, Buff Cochins, White Cochins, Rose Comb Black, Rose Comb White, White Booted, Light Brahma and Dark Brahma Bantams.
- No. 6—Black Breasted Red, Brown Red, White, Birchen and Black Game Bantams, Golden Duckwing Bantams, Black Breasted Red Malay, Silver Duckwing, White Japanese, Black Japanese, Black Tailed Japanese Bantams, Red Pyle Game Bantams.
- No. 7—White Holland, Bronze, Buff, Narragansett, Slate and Black Turkeys, Embden, Toulouse, African, Egyptian, Chinese and Wild or Canadian Geese.

Think of it. These seven beautiful painting reproductions, of 87 different varieties of fowls, all for the small sum of 10 cts. Just enclose a dime in your letter and say, send me the complete set of pictures.

roundness of the intestines will be lost and the fold will stick together. There will also be an undue amount of sliminess and a markedly unpleasant odor, neither of which is found in a properly dressed and chilled bird.

If the housekeeper is too dainty to see the chicken prepared in the market or have it done by an experienced servant in her own kitchen, she must run the greater risk of eating diseased or decomposed poultry. In any case she should refuse to buy a chicken with its crop full of sand and corn. Neither health nor economy is served by such a procedure. We have had some legislation on this point, but the buyer's demand would help mightily to correct the abuse. From the crop of a medium sized turkey I once extracted a full pound of freshly swallowed corn, sand and gravel, for which mixed goods I had paid at the rate of 20 cents a pound—a fair price for corn but decidedly high for gravel.

We need a Buyers' Union. Buyers are unorganized, uninformed, and easy prey for any kind of selfish commercial usage. Education of the buyer is the most powerful incentive to food reform that we have and the only certain method of insuring the enforcement of laws after they are enacted.

A properly prepared chicken, well bled, dry picked, chilled, and properly stored is good, even "fresh" as far as chemical composition is concerned after six to nine months. The cold storage chicken, like the cold storage egg, should be sold only under its own name and when the fresh product is out of season. It should be bought *hard frozen* (then you know it is storage) thawed in the home ice box for twenty-four hours and then cooked at once and served. Cold storage is conservation—and conservation only—to save the overproduction of the flush season for the scarce season. The evils of cold storage lie in misrepresentation, the storing of products already started on the road to decomposition by delayed handling, and the great danger of thawing, refreezing and restoring on the part of the retailer.

Apart from these special points which indicate the manner in which the chicken has been marketed, its youth and tenderness are to be judged by a rather small comb, smooth shanks, soft, thin skin and an easily bent breast bone. A coarse head, rough shanks, heavy, blunted toe-nails, thick rough skin, spurs in the case of a cock, and a hard breast bone, all spell age, however the fowl may have been handled.

Is all this trouble worth while? We think so. We must eat three times a day. We spend a large part of our time and money in providing food for our bodies, and our health and happiness wait to a great extent on good digestion. Chicken offers 2 per cent of protein, 8 per cent of fat and 850 heat units per pound. It compares favorably with sirloin steak in the amount of digestible nutrients furnished.

The meat of the chicken is the first we give our children, and frequently furnishes the last broth we give the invalid and the aged.

What are you going to do about it, Madam Housekeeper? Without your intelligent co-operation, the efforts of the laboratory and of the packing house to improve this important food product cannot carry very far.

* * *

ONCE in a while, in late Autumn there comes a day that eclipses anything the entire year has known. At dawn we sense it by the stillness of the leafless trees, by the tints of the sun as it illuminates the Eastern sky an hour or more before becoming visible on the horizon.

All the morning long we glory in the wealth of sunshine that sets the few belated birds to twittering and all but starts Spring bulbs to bursting. Windows and doors are everywhere flung open. Bedding and clothing sun from piazza roofs and clothes lines. Chickens chant and crow jubilantly in the farm yard. It is a day of days. Everywhere the world is glad. At noon the air is as balmy as June and the sun as warm as mid-Summer. There are no mosquitoes and few if any flies. The roadways are a marvel of smooth, well-keptness.

In the early afternoon of such a day, we drove leisurely thru the hill country of a great agricultural section. On a

hundred hills "the fodder was in the shock" and the corn in golden heaps as freed from its husk lent a certain picturesqueness and an air of plenty to the scene. The harvest was bountiful, the workers whistling as they tossed golden ears on sun-kissed mounds.

A panorama of clear sky, warm sun, well-kept farms, comfortable homes, happy faced children, interesting landmarks, stretches of woodland and glimpses of the boy off yonder! During a seventy-five to one hundred mile drive, we met perhaps half a dozen horse propelled vehicles. Ten years ago, in covering the same ground (which would have taken probably three days by horse), we would have met perhaps less than half a dozen motor drawn vehicles.

"We see a great many changes," said our companion. "In my time this whole section has changed from one of a few prosperous landlords and a great many poor, ignorant dependents, to one of general prosperity. Plain poverty is the exception today, while really pronounced poverty in an agricultural sec-

tion like this is practically unknown. I do not know of a man or woman in this community at the present time who can and will work, who is without work. And you can see the result as you ride along. The little homes with their patches of cultivated gardens are as well kept as the big ones and wherever you go in this section today you will find clean fence rows, trim orchards, attractive gardens and well-kept buildings."

"To what can this advance in farm life be attributed?" we asked.

"Well, the chief reason is because the world is growing better. People will tell you that nothing is as good as it used to be and that even human beings are going down hill just as fast as they can, but looking at the matter calmly, it seems to me that about everything has improved in one way or another. Yes, human nature is much the same, but we are on the up-grade nevertheless."

"People are coming more and more to trust one another. They are realizing that the greater the confidence placed in a man the more likely he is to live up to it, the greater the kindness shown a neighbor in distress, the greater reason there will be to love him. Business among reliable firms is no longer conducted upon the 'cut-throat' plan because every business firm realizes that upon courtesy, honest dealing and co-operation rests the one hope of success. Business firms can no longer afford to outwit or squabble with even the least of those with whom they have dealings. Out here in the country we find that it is not only perfectly safe to send a check for a shipment of goods to a firm in Chicago, St. Louis or New York City, but we are absolutely certain that we will be treated honorably, by the goods we ordered being shipped as ordered; that if they are not received in good shape they will be exchanged with no extra cost to us, and that if we are not perfectly satisfied in every particular, our money will be cheerfully refunded. And if you have never done business with a firm that misrepresented their goods, that substituted other goods for the makes you

operate your incubator successfully

70% of your hatching success depends upon the proper operation of your incubator and brooder.

In an 84-page book which we have published, we tell you how to set up and operate every well known make of incubator on the market. It also tells you how to select the eggs, how to cool them, how to test them, and how to care for the chicks. In fact, from cover to cover, this book is full of very valuable information. The regular price is 50 cents, but to close out the few remaining copies, we will send you this great book for

10 cents

If you raise one or a thousand fowls, you cannot afford to omit from your poultry library, a copy of the 1914 Year Book. The complete reports of the different poultry shows, which permit you in years to come, to look back and know the winners of that year, is alone worth the price. But this is just one of the hundred valuable things you will find in this big 384 page book. The regular price of this paper bound Year Book is 50 cents, but to close them out, the price to you is

25 cents

Now is your chance to get a world of poultry knowledge for a very small sum, so don't even hesitate but send us your order today. If you desire both books just fill in the coupon and send us the small sum of

35 cents

Fill in, tear off and mail with 35 cents

"But these are not the only ways in which the world has grown better. Less

Box A - - BUCYRUS, OHIO
Breeder of White Wyandottes that are just a little better than the ones you thought were the best.

CHICAGO, ILL., U. S. A.

than a hundred years ago, right here in this community dueling was common. No gentleman of honor would dare refuse if challenged, and war will eventually become as obsolete a manner of settling disputes as has dueling in our day. When warfare is abolished the world will have reached a stage where civilization may really go forward without handicap or hindrance. All the earlier civilizations failed because of the tremendous amount of hand labor which had to be wearily performed at great expense of time and human energy. That one class might advance, another struggled in want and misery, bowed 'neath the weight of back-breaking labor. Now comes modern invention to lift the crushing weight of overwork from humanity's back and give all classes of people a chance to come into their own. That is, modern machinery, devised and controlled by the brain of man, is gradually relieving mankind of the actual drudgery which he was through all former centuries forced to perform. The problem now is to keep humanity at the top of the heap, devising and guiding the machinery, and not allow the machine to become master. After all, a finer, better people; a truer, kindlier human family is what we are all striving for—not the product which the human savers, the machines, may produce; and as the years go by, we are gradually working in that direction.

"The aim of the churches used to be that of saving a part of the people. Today they are beginning to transform the world by serving one another. Uplift work of whatever kind is founded upon the principle of service. There can be no question about it, the world grows better, and if in a life time we can see such advances as these, how much greater must be the count by centuries?"

"At least we have reached a stage in civilization that it is the faith fidelity and honor in our dealings one with another, that has brought us thus far;

and that thru all manner of pillage and plunder, piracy and war, nothing finer or more worth while than this faith and trust in one another has been discovered—and it alone has survived."

The following recipes were tested and contributed by Miss Pearl Culver:

RAISIN PIE.

- 2 Cups raisins
- 2 lemons
- 2 cups white sugar
- 3 tablespoonsful flour
- 1 cup boiling water
- 2 eggs

Piece of butter size of an egg.

Grate the outside of the lemons, squeeze the juice and add to the chopped raisins, sugar, flour, hot water and eggs and mix together. Bake between crusts. This amount will make two large pies.

VANILLA WAFERS.

- 3 eggs
- 1 cup molasses
- 1 cup shortening
- 1 cup sugar
- 2 tablespoonsful soda dissolved in same amount of cold coffee.
- 1 tablespoonful vanilla

Sprinkle of salt.

Mix in the usual way and allow sufficient flour to mould. Roll thin and cut into shapes.

SOUR CREAM CAKE.

- 1 cup sugar
- 2 eggs broken into a cup and filled with thick sour cream
- 1½ cups flour
- 1 teaspoonful cream of tartar sifted with the flour
- ½ teaspoonful soda sifted with the flour.

Combine and flavor with a bit of spice or vanilla and bake in a moderately quick oven.

QUICK CUP CAKES.

Place the flour sifter in the mixing bowl and sift the following:

- 1½ cups flour
- ¾ cup fine granulated sugar
- 2 level teaspoons baking powder
- ½ teaspoonful salt

In a measuring cup melt ¼ cup butter, add a little milk and two eggs, fill the cup with milk and add, with a teaspoon vanilla. Bake in gem pans.

SUGAR COOKIES.

- 2 cups granulated sugar
- 1 cup butter
- 2 eggs
- 1 cup sour milk or buttermilk
- 1 teaspoonful soda (level)
- 2 teaspoonsful baking powder

Mix in order given, sifting in the soda and baking powder with the flour, using just enough flour to handle. Flavor as desired.

SAND TARTS.

- 3 cups brown sugar
- ¾ cup shortening
- 3 eggs
- 1 cup sour cream
- 1 teaspoonful soda and a little salt

Flour enough to handle.

Mix in the usual way, saving the white of one egg to brush over the top after putting the mixture into flat baking pan. Sprinkle brown sugar and cinnamon over top and bake in quick oven. Cut in squares.

MARGUERITES.

Put 1 cup sugar and ¼ cup boiling water in a sauce pan and allow to boil until it spins a thread when dropped from a spoon. Have the white of an egg beaten stiff and pour the boiled mixture over the egg, beating meanwhile. Add also ½ cup chopped nut meats and beat until the consistency of cake frosting. Spread on dainty thin crackers and place in the oven to brown for a few minutes.

POP CORN CRISP.

Boil 1 cup sugar, 1 cup table syrup, ½ cup butter to a taffy and pour while hot over freshly popped corn. Stir it well, and as it cools flatten it out on a moulding board with a rolling pin. Cut into squares. For the given amount of taffy, a large pan of popped corn will be required.

More Eggs—More Profit. Knollenberg's High-Protein Foods contain all the necessary food elements for complete nourishment. Insuring healthy chickens, steady producers of fertile eggs. ST. LOUIS, MO., SHOW.

Held at the Coliseum Thanksgiving Week, 1915.

By F. D. ROGERS.

AS IN previous years, St. Louis held its annual exhibition Thanksgiving week.

With all the interest now centered in one great show, St. Louis is bound to hold its place as one of the largest and best shows of the Middle West. The Coliseum building is well adapted for an exhibition of this nature, and with the well-arranged booths and fine cooping it made a favorable impression to all who were present. Was especially impressed with the system in vogue as to the cooping of the show, the judging starting at schedule time, marked catalogs being issued early during the show.

In the neighborhood of 2,000 birds were on exhibition. The Barred Rocks were, as usual, one of the largest classes—over 200 birds being shown. Mr. W. W. Henderson, of Bridgeton, Mo., made a most creditable showing, winning most of the first and second prizes and best display. Mr. E. A. Webb, Benton, Ill., won first and second exhibition pullet, as well as several other prizes. Mrs. Charles E. Popham, Charleston, Ill., made several entries, every bird being placed.

Fairly good classes of White Rocks were shown, Mr. T. S. Horn winning every first and best display.

White Wyandottes proved to be one of the stellar classes of the show. Mr. B. L. Pavey, Bunker Hill, Ill., made a remarkable showing, winning first and third cockerel, fourth hen and first pul-

let. His birds are of exceptionally good type and attracted much attention.

Single Comb Rhode Island Reds were one of the best classes of the show. Mr. J. J. Moore, Whittington, Ill., winning first pullet on a bird of remarkable type and color, also fourth cockerel. The winnings of E. W. Mahood in all of these classes were indeed exceptional.

The White Orpington classes were not quite as large as in previous years. Aldrich Poultry Farms, Columbus, Ohio, won first and third cockerel, first pullet and first young pen. No old stock shown by them. They were outstanding as to quality and were easy winners in these classes.

The Single Comb White Leghorns proved a large banner class. Mr. G. J. Gerber, of Dalton, Ohio, showing eleven birds. His winnings were first and second cock, first hen in first and second pen. Mr. Gerber decided to make the show at a late date; his birds in the second pen not even being washed, yet won regardless of this handicap.

AWARDS AT ST. LOUIS SHOW.

BARRED ROCKS—W. W. Henderson, Bridgeton, St. Louis Co., Mo., 1-3 cock, ckl.-bred hen, 1 ckl., hen, 1-2, ckl.-bred hen, 1 ptt.-bred pen, 3-4 ptt., 1-3 pen, ptt.-bred cock, 1-2-3 ptt.-bred ckl.; E. A. Webb, Benton, Ill., 2-4 cock, 2-3 hen, 1-2 ptt., 2 pen, ptt.-bred cock, ckl.-bred ptt., ptt.-bred pen, 3 ckl.-bred hen; Alfred Sauerbier, Lee Summit, Mo., 2 ckl.; P. W. Parker, Edwardsville, Ill., 3-4 ckl., 4 ckl.-bred pen; C. F. Hackman, Staunton, Ill., 4 hen, ptt.-bred cock, 3-4 ptt.-bred pen; C. C. Fritz, Staunton, Ill., 4 ckl.-bred hen; Chas. F. Franz, Staunton, Ill., 1 ckl.-bred ptt., 3 ckl.-bred pen; Chas. E. Popham, Charleston, Ill., 3 ckl.-bred ptt.; Chas. H. Kleinschmidt, De Soto, Mo., 4 ckl.-bred ptt.; Mrs. Chas. E. Popham, 2 ckl.-bred pen.

WHITE ROCKS—T. L. Horn, Clayton, Mo., 1-2-4 cock, hen, 1-3 ckl., 1-2 ptt., 1-2-3-4 pen; Fred Sassmannshausen, Clayton, Mo., 3 cock; Otto Zimmermann, St. Louis,

Mo., 3-4 ptt., 2 ckl.; F. Bezenberger, St. Charles, Mo., 3 hen, 4 ckl.

BUFF ROCKS—T. H. Lucas, Pattonville, Mo., 1-2 cock, 2-3 hen; B. H. Schleemer, St. Louis, Mo., 3-4 cock, 4 hen, 2 ptt.; Hugh D. Wilkinson, Columbia, Mo., 1-2 ckl.; F. E. Linder, Greenville, Ill., 1 hen, 3 ckl., 1-3 ptt.; Thos. Elliott, St. Louis, Mo., 4 ckl., ptt.

PARTRIDGE ROCKS—Rosco C. Bell, Mt. Carmel, Ill., 1 cock, 1-3 hen, 2 ckl.; Frank Truttmann, Trenton, Ill., 2-3 cock, 2 hen, 4 ckl., 1-3-4 ptt.; W. H. Langdale, St. Louis, Mo., 1 ckl., 4 hen, 2 ptt.; Chas. Sheffer, Belleville, Ill., 3 ckl.

COLUMBIAN ROCKS—Saml. Plant, Easton Farms, Clayton, Mo., 1 cock, ckl.

WHITE WYANDOTTES—G. E. Rautenberg, Webster Groves, Mo., 1 cock; Carrington Jones, Muntyn, Tenn., 2-3 cock, 1-2-3 hen, 4 ckl., 3-4 lt., 1-2 pen; The Winrose Cottage at Fairfield, Rose Lane, Kirkwood, Mo., 4 cock; B. L. Pavey, Bunker Hill, Ill., 1-3 ckl., 4 hen, 1 ptt.; H. R. Doeding, St. Louis, Mo., 2 ckl.; Earnest Bover, Greenfield, Ind., 2 ptt.; Gus Seaver, Overland, Mo., 3 pen; August Poetting & Son, Maplewood, Mo., 4 pen.

BUFF WYANDOTTES—Wm. J. Dewey, Greenville, Ill., 1-2 cock, ckl., 1-2-3 ptt., 1 pen; Gus Loeffel, St. Louis, Mo., 3 cock, ckl., 1 hen, 2 pen.

GOLDEN WYANDOTTES—John W. Faber, Okawville, Ill., 1 pen.

SILVER WYANDOTTES—Jas. T. Bailey, St. Louis, Mo., 1 cock, 2-3 hen; Mrs. F. R. Walton, Maplewood, Mo., 1-2 ckl., 1-2-3 ptt.; J. Ed. Green, Blodgett, Scott Co., Mo., 3 ckl., 4 ptt.; Mrs. Alf. Armstrong, St. Louis, Mo., 1 hen, 2 pen; Milton C. Lauenstein, St. Louis, Mo., 1 pen.

COLUMBIAN WYANDOTTES—Mrs. J. O. Speed, Webster Groves, Mo., 1 cock, 2-4 ptt.; Mrs. S. T. Honig, Webster Groves, Mo., 1 hen, ckl.; F. R. Walton, 2-4 ckl., 3 ptt.; Leo A. Lee, Chicago, Ill., 3 ckl.

PARTRIDGE WYANDOTTES—E. H. Casey, Ewing, Ill., 1 hen.

SPANGLED WYANDOTTES—A. Zimmerman, St. Louis, Mo., 1 cock, hen.

S. C. RHODE ISLAND REDS—John Grueter, Burlington, Racine Co., Wis., 2 cock; Edw. W. Mahood, Webster Groves, Mo., 1-4 cock, 1-2 hen, pen, 1-2-3 ckl., 4 ptt.; Dr. Jules Baron, Glen Park, Pevely, Mo., 3 cock; J. J. Moore, Whittington, Ill., 4 ckl., 1 ptt.; Miss Minnie Alston, Coulterville, Ill., 3 hen; Herman Seaver, Overland, Mo., 4 hen; M. J. & C. F. Ward, 2-3 ptt.; Clifford L. Jackson, Muskogee, Okla., 3 pen; Mr. and Mrs. Tyrell, St. Louis, Mo., 4 pen.

R. C. RHODE ISLAND REDS—Dr. Virgil Blakemore, Fayette, Mo., 1-2 cock, hen.

Do You Want to Own Winning Birds?

The Henderson Strain are the World's Foremost Plymouth Rocks

Because They Have an Established Official Record for the Past Twenty Years at America's Leading Shows

Their wonderful winnings in the past were eclipsed this year by their performance at two great shows. In competition with the best from the yards of our foremost breeders, and in the largest classes ever shown in the South and great Middle West, they won eighteen out of a possible twenty-two first prizes. This unprecedented victory was attained with two different strings of birds and the fact that the Henderson Strain won every first prize offered on male birds at these two great shows is a revelation in Barred Rock breeding.

Write me if you want the best quality of exhibition birds to show at your coming show. I can send you birds in the pink of show condition at prices that will suit.

I have a grand lot of breeding birds, either cockerel or pullet bred, that have the quality necessary to produce winners. If you want a down to date breeding male bird, I can furnish you with more quality for less money than any other breeder.

Two of the Greatest Wins Ever Made by a Barred Rock Breeder

At the Tri-State Show held at Memphis, Tennessee, the last week in October, 1915, in competition with 553 Barred Plymouth Rocks from the yards of our best breeders, the Henderson Strain won as follows:

First Prize Exhibition Cock, First Prize Exhibition Cockerel, First Prize Pullet Bred Cock, First Prize Pullet Bred Cockerel, First Prize Cockerel Bred Hen, First Prize Cockerel Bred Pullet, First Prize Exhibition Pen, First and Second Prize Cockerel Bred Pens, First and Second Prize Pullet Bred Pens, Special Prize for the Best Display in the American Class; Sweepstakes Prize for the Best Exhibit in the Show, all varieties competing, my birds winning over two thousand points; Sweepstakes Special for the Best Cockerel from Missouri.

NOTE—I won every first prize offered on males and breeding pen at this show.

At the Great Coliseum Show held at St. Louis the last week in November, 1915, in competition with the cream of the country, the Henderson Strain, with an entirely different string of birds than was shown at Memphis, won as follows:

First and Third Prize Exhibition Cock, First Prize Exhibition Cockerel, First Prize Exhibition Hen, First and Third Prize Pullet Bred Cock, First, Second and Third Prize Pullet Bred Cockerel, Third and Fourth Prize Exhibition Pullet, First and Second Prize Cockerel Bred Hen, First and Third Prize Exhibition Pen, First Prize Cockerel Bred Pen, First Prize Pullet Bred Pen; Special Sweepstakes Prize for the Best Display in the Show, all varieties competing; Special Sweepstakes Prize for the Best Pen in the Show, all varieties competing; Special Sweepstakes Prize for the Best Hen in the Show, all varieties competing; Special for the Best Display in the American Class, Grand Champion Male, Grand Champion Female, Special for the Best Colored Male, Special for the Best Shaped Male, Special for the Best Colored Female, Special for the Best Shaped Female.

NOTE—I won every first prize offered on males and pens at this show. My first prize exhibition hen and pen were in a class by themselves, winning both sweepstakes prizes. This is the first time that these honors were ever conferred on Barred Plymouth Rocks at any leading poultry show.

These winnings have never been approached by any other Barred Rock breeder. I have, after twenty years of selective breeding, produced that excellence of quality that shows only in the Henderson Strain, and the official record in the leading show rooms of the country shows without a doubt who has the best producing strain.

Write for my descriptive catalog of one of the largest Barred Plymouth Rock farms in the world.

For the season of 1916 I will mate forty breeding pens which will consist of the finest specimens of Barred Rocks that were ever selected for breeding purposes. Send your order for eggs as soon as possible so they may be shipped to you at the time you want them.

POULTRY SHOW AT QUINCY,
ILL.

Ninth Annual Exhibition—Held at the New Armory Building, November 22-28, 1915.

By F. D. ROGERS.

UNQUESTIONABLY no show in the Middle West has enjoyed a larger growth from every standpoint than the now well-known Quincy Show. The fanciers were fortunate, indeed, to secure the New Armory Building in which to hold this year's exhibition, which consisted of over 2,000 birds that beamed in quality above the average show.

The poultryman and all interested in the now well-known Quincy Show are indeed an enthusiastic lot of fanciers, making visitors and outside exhibitors feel very welcome and very much at home.

One feature of this show is the banquet which was held Thanksgiving evening at Hotel Quincy, nearly 150 being present to enjoy the festivities of the evening and the hospitality of their Quincy friends. Following the banquet, informal talks were given by very well-known poultrymen and judges who were present. The address of welcome was given by a representative of the Chamber of Commerce, and in his well-chosen remarks, all were made to feel very much at home in Quincy. Among the others called upon at this time were Judges D. E. Hale, Johnson, Heimlich, Thompson and several others whose remarks were well chosen in regard to the poultry industry in general. The show was well cooped, the judging starting promptly.

Barred Rocks proved one of the banner classes of the show both in regard to number and quality shown. Mrs. Charles E. Popham made a most remarkable winning, every bird shown being placed. Mr. G. A. Walker, Polo, Ill., made a creditable showing, every bird being shown by him with one exception being under the ribbons. His first prize exhibition pen were birds of exceptional good type and well deserve the blue.

The classes in Silver Wyandottes were small, but with quality above the average. The veteran fanciers A. and E. Tarbox, Yorkville, Ill., winning every first and several other prizes. The quality of their Silvers is well known throughout the country.

The Buff Wyandottes shown by Charles Howison, Sandwich, Ill., captured first cock, first cockerel, first pullet and first hen. They were well shown and much admired by the Buff Wyandotte fanciers present. First prize pen was won by Roy H. Waterman, Barrington, Ill.

Single Comb Rhode Island Reds were out in large numbers and included many individual specimens that commanded the attention of all the Red fanciers during the show. The birds shown by Royal Red Yards, London Mills, Ill., were of especially fine type and typical Reds in every way.

Single Comb White Leghorns were as usual, one of the star classes of the show. Mr. C. W. Moeller, Quincy, Ill., captured the majority of prizes and best display. His first prize cockerel and pullet were easy winners in these large classes. This speaks volumes for the quality of Mr. Moeller's birds.

In Buff Orpingtons we found a very

W. F. FRASE, Exclusive Breeder of High CLASS RED SUSSEX

QUALITY rather than QUANTITY with me. A few fine Cockerels and Trios for sale at reasonable prices. Write me just what you want in first letter. Mating List ready February 1st.

W. F. FRASE, East Akron, Ohio. Route 21.

GOLDEN CAMPINES

Again I win at Chicago—1st young Pen; 1st old Pen; 1st Cock and best Display at National Club meet. Write me for prices before you buy stock or eggs. 4 pens headed by a first New York or Chicago winner.

The Coming Show Fowl of America

Great winter layers. The fastest growing fowl in existence, having the largest per cent of the finest flavored flesh to offal of any breed, making them the King of utility fowls.

At Quincy last November I won three blue ribbons on three entries—cockerel, pullet and pen.

I have two pens of this great variety from which I can spare a few eggs at \$5.00 per 15.

Pen No. 1, headed by 1st pen cockerel at Quincy and a son of last season's Crystal Palace champion bird.

Pen No. 2, headed by a son of last season's Buffalo winner.

These two males are mated to my Quincy winning females and daughters of Crystal Palace, Madison Square and Buffalo winners. Free mating list ready soon.

LONGFIELD R. C. REDS

Are again victorious at the greatest of all Red shows, winning

3 FIRST PREMIUMS

At the December, 1915

Chicago Coliseum Show

Being the only R. C. Red breeder to win more than one first premium. Our complete awards were: 1st cock, 1st old pen, 1st and 5th young pen, 2nd and 4th hens, 2nd pullet, silver cup for best display, silver cup for best four cocks, silver cup for best four hens, silver cup for best four pullets, and shape and color specials on male.

At this great show we have won best display three successive years—a record—and in the past five seasons have won more than four times as many first premiums as any competitor.

We have a fine lot of stock for sale in both breeding and exhibition birds—on approval always. Illustrated mating list ready February 1st.

TRAP-NESTED

S. C. White Leghorns

Are the Kind that Pays

We are ready to take your orders for Baby Chicks and Hatching Eggs for the season of 1916. Order early and you will not be disappointed, as we were sold out early last season. Our S. C. W. Leghorns are not the result of one or two seasons experiment in trap-nesting, but have been carefully selected and bred by us for years, and today they stand foremost in utility trap-nested qualities. Our breeding pens are made up of trap-nested hens with records of two hundred eggs and upwards. We have a few more breeders for sale. Allow us to quote you prices that will astonish you.

Illustrated Catalog Free.

TWELFTH ANNUAL SHOW OF THE SOUTH JERSEY POULTRY AND PIGEON ASSOCIATION, BRIDGETON, NEW JERSEY.

This year's exhibition of this energetic and hustling organization, under the able management of Supt. Geo. H. Husted and Sec. Chas. H. Maier, was notable and commendable for many features worthy of imitation by other local show managements.

True, few communities afford such a magnificent hall to stage their exhibitions as the armory of Co. K, N. G., N. J., offering ample space and splendid light and ventilation.

The South Jersey Poultry and Pigeon Association, not only recognize that the future of the poultry industry is dependent upon the boys and girls of today, but in this year's effort they did much to crystallize their theories into practical demonstration. Last Winter the Association made the offer to the High School students of Bridgeton that they would donate to any student, under necessary but easy conditions, a setting of eggs from Standard-bred birds, the breed and variety to be of the student's own selection.

One of the conditions of the donation was that the student receiving a setting must exhibit at least one bird at this year's show.

And I am pleased to report that in the student's aisle at the above show there were entered thirty birds, of most excellent quality, and of such worthy breeds as Barred and White Rocks, White Wyandottes, Rhode

Island Reds, Light Brahmas and Black Minorcas.

In addition to cash prizes and ribbons awarded the winners on their entries, the Association further offered a first, second and third cash award for the best essay submitted on "How I Raised My Birds."

It is interesting to note that whereas the boys had more entries of birds than the girls, the latter captured most of the "firsts" and a Miss Anna S. Williams had the first prize-winning essay.

As a further effort to interest the young in "more and better birds" after the judges had completed their work, the Association entertained for one hour the students not only of the High School, but of all the public schools of this regressive South Jersey municipality.

Another attractive feature of this show was an exhibit staged in the center of the hall by the New Jersey Fish and Game Commissioners, consisting of several varieties of pheasants, wild turkey, wild geese, duck and teal. Worthy of mention also was the evidence that the merchants and business men of Bridgeton fully appreciate the value of stimulating and encouraging the poultry industry along Standard-bred lines, for a large room in the armory was almost completely filled with articles of merchandise donated as special prizes, many of them of great intrinsic value.

Without any intention of detracting from the credit due the generosity of Bridgeton business men, I feel assured, however, that the show management deserve the greater commendation, for I believe if properly approached the business men of any show community would prove equally generous and helpful.

In regard to the poultry display at this show, Barred and White Rocks, White Wyandottes, and S. C. R. I. Reds were the only large and hotly contested classes. Other breeds and varieties were, of course, in evidence, with many individual specimens of merit, but the competition was not what it should have been. A S. C. Black Minorca was awarded the special for the best cock in show, a truly wonderful bird exhibited by the Lauren Poultry Yards.

I was surprised to find in South Jersey so small an entry of S. C. White Leghorns. Somehow, before I visited Bridgeton, I thought the White Leghorns had run all other breeds and varieties out of South Jersey.

F. C. Carter, of Vineland, starred in S. C. White Leghorns.

Another Vineland breeder, C. W. Brown, captured the special for the best cockerel in the show with his Barred Rock, that at another show only secured fourth in less competition, showing how quickly the bird had matured.

Almost equaling the Barred Rock entries in number and comparing favorably as to quality was the White Wyandotte class. Honors fairly well distributed with Carr Bros., of Vineland, N. J., leading with cock 1-3 cockerel 1-4, hen 1-3, pullet 1-2, and pen 2.

The best hen in the show went to a White Rock, entered by Minch Bros., and they also secured the special for best display in this variety, although the Fairfield Poultry Yards got away with several first and seconds in a class that would have done credit to many larger exhibitions. Best pullet in the show went to a Barred Rock shown by Castner & Dundas, Glen-Gardner, N. J., a bird, if exhibited at the Palace or Garden, would cause some of the habitual winners in this variety at these national shows, quite a little anxiety until the awards were made.

J. H. Petherbridge.

AWARDS OF MISSISSIPPI VALLEY FANCIERS' ASSOCIATION, MOLINE, ILL.

BARRED ROCKS—Peter Stevens, Milan, Ill., 1 cock, 2-3-4 plt.; B. O. Ball, Cambridge, Ill., 2-3 cock, 5 plt., 1 plt.-mated cock, 2 ckl.-mated plt., 1 ckl.-mated pen; C. H. One Dollar BOOKS YOUR Order For "Better-Hatched" Chicks

90,000

FOR APRIL DELIVERY

We can still book a few thousand for latter part of March—to get them at this time you must act quickly as we have 60,000

chicks sold; nearly all to old customers, who began to place their orders last August. One customer says:

"I have bought S. C. White Leghorn chicks for several years. The last four years I have bought your 'Pay-streak' strain, they have the others all backed off the map. Its eggs I want, and they deliver the goods." We cannot help but believe his statement, as he ordered 3,000 "Pay-streak" White Leghorns for 1916. Another says: "One of your 'Pay-streak' White Leghorns laid at the age of 116 days." Think of it! Less than four months. They get the profit habit early. Another one: "I kept fourteen pullets from the twenty-five White Wyandottes I bought of you last March; one laid her first egg when four months and twenty-seven days old; one laid at five months and four days; one at five months and ten days; they laid 206 eggs in November. Money couldn't buy them." We showed five White Wyandotte pullets at the Shelby, O., show in December, they scored 95½, 95, 95, 95, 94½. Needless to say they got the ribbons, as well as 1st pen, 1st and 3rd cockerel, and special for best ten birds in show. Good enough for any one, are they not?

WE MAKE A SPECIALTY OF S. C. WHITE LEGHORNS and BARRED PLYMOUTH ROCKS IN 500 AND 1000 LOTS

We also breed and hatch, S. C. Brown Leghorns, S. C. Buff Leghorns, White Plymouth Rocks, S. C. Black Minorcas, White Wyandottes, S. C. and R. C. Rhode Island Reds, S. C. White and Buff Orpingtons. These are shipped in lots of 25, 50, 100 and up.

We have a hatching capacity of 100,500 eggs and have shipped over one million chicks with not one dissatisfied customer.

THE CO-OPERATIVE BREEDING & HATCHING CO., Box A Tiro, O.

PANAMA-PACIFIC INTERNATIONAL EXPOSITION POULTRY SHOW, SAN FRANCISCO, NOVEMBER 18-25, 1915.

By HARRY H. COLLIER

SAN FRANCISCO Poultry Show or the Panama-Pacific Inter-National Poultry Show, was a good one. The show in point of numbers did not meet the expectation of the management, as Live Stock Commissioner D. O. Lively gave it out that he wanted and would have 12,000 fowls. In this Mr. Lively was mistaken. But what was short in numbers made up in quality.

The official catalog showed that there were 3,252 chickens in the single classes, 1,550 in pens. Display pens made up 276 birds, Bantams showed up with 345 fowls. Pigeons came out to the tune of 1,618, Turkeys 168, Geese 90, Ducks 226 and game farm exhibits 200.

The judges who placed the awards were as follows:

E. C. Branch, Lee Summit, Mo.; W. H. Card, Manchester, Conn.; Harry H. Collier, Tacoma, Wash.; A. H. Currier, Santa Rosa, Cal.; W. M. Coats, Vancouver, B. C.; W. C. Ellison, Elma Center, N. Y.; Mrs. Florence

Spangled Wyandotte hen, "Empress," winner of first at Panama-Pacific Exposition. L. Cook, Oakville, Iowa, Originator Spangled Wyandottes.

Forbes, Decatur, Ala.; A. G. Goodacre, Compton, Cal.; W. R. Graham, Guelph, Ont., Can.; C. G. Hinds, Oakland, Cal.; V. O. Hobbs, Mountain Grove, Mo.; Geo. D. Holden, Owatonna, Minn.; O. L. McCord, Peoria, Ill.; Chas. McClave, New London, O.; Russell F. Palmer, Lincoln, Neb.; W. C. Pierce, Hope, Ind.; Irving Rice, Cortland, N. Y.; W. S. Russell, San Francisco, Cal.; E. G. Roberts, Atkinson, Wis.; Jas. A. Tucker, Royal Oak, Mich.; C. P. Van Winkle, Dallas, Tex.; Daniel P. Shove, Fall River, Mass.; Theo. Wittman, Allentown, Pa.; Walter Hogan, Petaluma, Cal.

The show was well cooped by Spratts, and Superintendent Thomas E. Quisenberry did all he could to make it pleasant and agreeable for the judges, as well as the visitors. It is said that more than a million people saw the fowls during the week, and the fair attendance during the time of the show will make up more than that many people. The show room was one that was used for an exhibit of motors and it is one of the big buildings of the fair. This building was about 500 feet long and 300 feet wide. Every single fowl had a coop to itself and the isles were wide enough to view the fowls in comfort.

I did not attempt to get the number of birds in each variety, as it would mean too much statistics for an article of this kind, but will say that the classes in all of the so-called "utility" varieties were well filled and each exhibitor had all of the competition that he desired, and there was no winning by default.

A sixth or eighth premium at San Francisco would be equal to a first in many shows. The management had the judges issue eight premiums in all varieties and in some cases the eighth premium bird was not very far removed from the best bird in the class. The quality was on hand in most every variety. To go into detail means a whole lot of space, but it is not out of place to say that the first pen in Barred Rocks was as good as in the best of shows. The other pens were up and coming, but the first pen stood out. The first hen, owned by A. C. Hawkins, stood out by herself. The Barred Rock class as a whole was voted one of the best in the show.

White Rocks was a hot class of fowls from cocks to pens. An eighth premium in this class meant that the fowl had won in the warmest competition that White Rocks ever get into. First pen was a dandy and first cockerel, owned by U. R. Fishel, was a bird that could have gone anywhere and won out.

Buff Rocks were there in goodly numbers, and the judge, E. C. Branch, said that the birds as a whole were about as good as he finds in his travels around the circuit. The pullets in my estimation were the best in the class. I did not like the first cock as well as others in the class, but I did not handle any of the birds and only had an outside view. The pullets were well placed and each one deserved its win.

Fishel and Hasselman exhibited a bunch of Blue Plymouth Rocks that attracted quite a little attention.

Partridge Plymouth Rocks were not a large class, but there were a lot of good birds in the show.

Red Pyle Plymouth Rocks turned out with a nice bunch that were much admired by the crowds.

Columbian Plymouth Rocks were a small class of good birds.

Silver Wyandottes was quite a class and the winners were all very good. The Tarbox string from Illinois won a goodly portion of the premiums and their first premium cock was much admired.

Golden Wyandottes was another good class of birds from cocks to pens. The first hen and first pullet standing out in the class.

White Wyandottes were the big class of the family and the "stuff" was certainly on hand. First pen stood out well, but not so much ahead of second. First cockerel was a dandy, and it can go most anywhere and get a mention if not a first ribbon. The class from cocks to pens were all good.

Buff Wyandottes not a large class, but some very good birds in both type and color came out.

Black Wyandottes, another small class of very fair birds. United Farms got the best of this class and took the lion's share of the first.

Partridge Wyandottes made quite a showing and here is where the British Columbia fanciers got in their work.

Silver Penciled, a small class of fair birds.

Columbian Wyandottes, a small class of very good birds.

Black Wyandottes, not a very large class but were pronounced by the judges very good.

Blue Wyandottes, a small class of very fair fowls.

Spangled Wyandottes turned out a good display of very good birds. L. Cook made this display and they had very good Wyandotte shape, as well as Silver Spangled color. This variety

POULTRY SECRETS DISCLOSED

We offer to all poultry raisers the essential knowledge and secret methods of many of the most successful poultrymen of America. As a rule these secrets have been guarded with extreme care, for it is on them that the great successes have been built. They will cost YOU only a trifle and a few minutes to write us.

How We Obtained These Secrets

Michael K. Boyer, Associate Editor American Poultry Advocate, has had exceptional opportunities and the closest friendship with poultrymen all over the country. They have freely told him many of their most jealously treasured secrets, many others we have bought, and this scattered material, together with several of Mr. Boyer's own valued methods, has now been collected in book form. It must be clearly understood that **every secret has been obtained in an honorable way.**

"POULTRY SECRETS"

Contents

SECRETS OF FOWL BREEDING—Burnham's Secret of Breeding, Felch's Mating Secret, Mendel's Secret of Hereditary, Secret of Alternating Males for Fertility, The Grundy Method, Curtiss' Secret of Hatching More Pullets than Cockereels, Davis' Secret of Raising Every Chick, Babcock's Secret of Developing the Spike on a Rose Combed Fowl.

SECRETS OF FEEDING—Secret of Feeding Grains, Dr. Wood's Laying Food Secret, Feeding Linseed Meal, Feeding Meat and Salt, Proctor's Salt Secret, Brackenbury's Secret of Scalded Oats, Feeding Charcoal, Grit and Oyster Shells, Secret of Green Feed, Secret of Feed at Fifteen Cents per Bushel, Sprouted Barley Secret, Smith's Secret of Preserving Vegetation in Poultry Runs, Important Feeding Secret, Miscellaneous Feed Pointers, Chick Feed Secrets, Seely's Secret of Dry Bran Feeding, Gowell's Fattening Secret, Gray's Fattening Secret, Greiner's Corn Feeding Secret, McGrew's Secret of Feeding During Moulting.

SECRETS OF HOUSING AND CARE—Secret of Successful Yarding, Secret of Telling the Laying Hen, Secret of 200 Eggs per Hen per Year, Lawney's Secret of Insect Killers, Secret of Successful Moulting, Zimmer's Secret of Securing Foster Mothers, Broody Hen Secrets, John Robinson's Secret, Secret of Chicks Dying in Shell, Secret of Scaly Leg Cure, Secret of How to Hold a Fowl, Blanchard's Secret of Stopping Cocks from Crowing at Night.

EGG SECRETS—Brown's Secret of Preserving Eggs, Secret of Killing the Fertility of Eggs, Secret of Obtaining Winter Eggs, Secret of the Angell System, Secret of Eggs All the Year, Secret of Having Perfect Eggs, Kohn's Secret of Selecting Layers, Kulp's Secret of Producing Great Layers, Professor Rice's Fat Hen Secret, Crane's Secret of Holding Eggs for Hatching, Boswell's Secret of Testing Eggs, Dr. Woods' Egg Hatching Secret.

MARKET SECRETS—Judging the Age of Dressed Poultry, Secret of Dressing Fowls, Secret of Celery-Fed Broilers, Secret of High Priced Stock, Truslow's Secret of High Prices for Ducks.

SECRETS OF EXHIBITING—Drevenstedt's Secret of Exhibition Fowls, Heimlich's Secret of Exhibition Fowls, Zimmer's Secret of Line Breeding, Rigg's Secret of Uniform Markings, Marshall's Secret of Training Show Birds, Lambert's Method of Growing Good Tails, Heck's Secret of Adding Exhibition Weight, Fishel's Secret of Preparing Fowls for Early Fall Shows.

First published in 1908, this collection of the carefully guarded secrets of famous poultrymen created a sensation in poultry circles. It has run through fourteen editions, and is still selling at a lively rate.

Is this cock properly held? "Poultry Secrets" tells you how to carry fowls, and scores of secrets far more important and hitherto unrevealed.

15th Edition Now Ready, Revised and Up-to-date

Read What Purchasers Say

I received Farm Journal and "Poultry Secrets," and am very much pleased with both. The secrets are worth their weight in gold. Why, I paid \$5.00 for the sprouted oat method. You certainly give a fellow over his money's worth.

Andrew F. G. Morey,
Utica, N. Y.

I purchased a copy of "Poultry Secrets," and find many helpful ideas in it, especially Dr. Woods' Egg Hatching Secret.

Mrs. F. T. Darnell,
Westfield, Ind.

By putting within our reach these "Poultry Secrets," you are doing a more philanthropic work than giving alms or endowing hospitals, for you make it possible for us to make both ends meet.

L. Boyce, Milwaukee, Wis.

Received your book of "Poultry Secrets." It's an exceptionally instructive work, and worth \$10 to any progressive poultryman. I would not care to take that for my copy if I could not get another.

Robt. F. Kingsland,
Montville, N. J.

The Farm Journal came to hand, and later "Poultry Secrets" also arrived. I was very glad to receive them and have been greatly interested in them. You are doing a glorious work in diffusing such valuable knowledge for so little money.

F. B. Meade, Boston, Mass.

As to "Poultry Secrets," I will say, I have lectured on this subject over the greater portion of this state for the past 15 years, and have about every book that is published on this subject in my library. I consider this book the most valuable I know for the general public.

L. A. Richardson, Marine, Ill.

Profusely illustrated, with many fine drawings and diagrams. 64 pages

HAVE YOU USE FOR SUCH A BOOK? THEN READ THE OFFER BELOW

The POULTRY SECRETS BOOK is sold in combination with the Farm Journal, Philadelphia. The FARM JOURNAL is the standard paper for everyone who lives in or near the country, or ever has, or ever expects to. A particularly fine poultry department, more valuable than most poultry papers, 37 years old, 1,000,000 subscribers and more. Goes everywhere. Clean, clever, cheerful, amusing, intensely practical. Cut to fit everybody, young or old, village, suburbs, or rural routes. Unlike any other paper and always has been.

AMERICAN POULTRY ADVOCATE, the great New York State paper, published at Syracuse, and full of good reading matter, is always welcomed by the subscriber. Now in its 22nd year. It is conceded to be one of the best poultry papers published in the United States. Well edited by recognized authorities on the subject of practical poultry raising. Has a guaranteed circulation of 45,000 copies per month.

SPECIAL OFFER For \$1.25 (cash, money order or check) we will send post-paid the POULTRY SECRETS BOOK and the FARM JOURNAL for four years, and AMERICAN POULTRY ADVOCATE two years, all for \$1.25 (to Canada \$2.25, foreign countries, \$2.75, to Philadelphia, Pa., \$2.05), if order is sent at once to

AMERICAN POULTRY ADVOCATE, 617 Hodgkins Block, Syracuse, N. Y.

is in its making, but it promises to make good.

Black and Mottled Javas were out in fair numbers, the blacks leading.

Single Comb Rhode Island Reds were some class. Here was the big exhibit of the show. The first prize pen was listed at \$200, sold at that price and changed hands later in the show for \$500. This was the best sale made in San Francisco show but other good sales were made and some big offers refused.

Rose Comb Rhode Island Reds was another big class of fowls and the winners were good enough to go into the best of company, it matters not whether they were East or West, North or South.

Buckeye was a large class of good birds. The first hen was a fowl that got into the winnings so often that one would well say that he beat the class.

Dark Brahmans were not what might be termed a large class, but there were some fine fowls exhibited in all sexes, including pens.

Light Brahmans, a dandy class of birds. The first hen was a fowl that could take a ribbon in the best company on earth and the cock was a dandy. This was a good class of birds all the way thru.

Cochins in Buff, White, Partridge and Black were not out in large numbers, but the birds that came were very good.

Black Langshans, a large class of good birds. First hen was a bird that stood out like a sore finger. First pullet very good and so was first cock.

White Langshans, a small class, first cock and first hen being the best in the bunch.

Single Comb Brown Leghorns, a large class of good birds. The cock birds were about as good as are brought together anywhere and the sixth prize cock could have easily been placed first without any great amount of kicking and the first lowered to that place. In fact the whole class was good from cocks to pens.

Single Comb White Leghorns, a large class of good birds. The cock that headed the first pen was the best bird in the show, according to my way of thinking. Here was a cock that was as good as the makers of the Standard contemplated when the weights were raised. There was not a poor bird among the winners.

Rose Comb Brown Leghorns, a dandy class of birds. The pens and cocks were more than good.

Rose Comb White Leghorns, a fine lot of birds. The winners were mostly from the coast.

Single Comb Buff Leghorns, a fine class as well as a great quantity of fowls exhibited.

Black Leghorns, a small but very good class of birds.

Silver Leghorns showed up with some very good birds.

Rose Comb Black Minorcas, a goodly lot of birds from cocks to pullets.

Black Minorcas, one of the strong classes of the show. Judge Coats claimed that he found his best birds in this variety in cocks and hens.

White Face Black Spanish, a big lot of birds for the variety and some classy fowls were found in the bunch.

Blue Andalusians were there in goodly numbers, with quality to burn, so said the judge who placed the awards.

Anconas, lots of them, and some mighty good ones. Rose Comb Anconas, another good class, but not so large in numbers as their single comb sisters.

Silver Gray Dorkings, just a few, but very good.

Red caps, only a few, but very fair.

Buff Orpingtons were a fine lot of fowls, first pen being about as good as they make them. This variety was strong from cocks to hens and O. L. McCord, who placed the awards, said that the first pen male was just what the Buff men needed.

Black Orpingtons, a fine class of fowls. First cockerel took the medal for the best fowl in the show. This bird was a dandy and so were the birds in the rest of the class. The record made by the Blue Ribbon Poultry Farm in this class was one to be proud of.

White Orpingtons were on hand in big lots. Every bird had hot competition and the winners were good enough to go into the best company.

Blue Orpingtons, a small class of good birds.

Rose Comb Buff Orpingtons turned out a nice lot of birds.

Rose Comb White Orpingtons were also on hand.

Red Orpingtons also showed up with some very fair fowls.

Dark Cornish were a strong class of fowls from cocks to hens and here was quality to burn.

White Cornish, a nice class of good birds.

White-laced Red Cornish were there and made a good showing.

There was a bunch of Sussex and some mighty good ones exhibited. Gensemer Brothers made a good record with their Reds and they won first and second cocks, first and second hens, first and second cockerels and first and second pullets, not to count first pen. Speckled Sussex were also out in good shape and Gensemer Brothers also were well up into the winnings on some fine birds. Light Sussex came out in goodly numbers and again Gensemer Brothers got their share of the best awards.

Black Polish with their White Crest were on hand with a lot of good birds.

The Polish class as a whole was not large, but several varieties helped to make the show beautiful with their crest and many colors.

Silver Spangled Hamburgs turned out well with some good birds, while their penciled sisters only showed up with a few. Black Hamburg and LaFloch were also on hand.

Houdans, a good class of very nice fowls in every sex and there was quite a showing of them. A few White Houdans were also in the show.

One breeder exhibited a bunch of Crevecours that were looked over by the crowds and they created some interest on account of being so rare.

Campines were out with a big bunch of both Silver and Golden. The first premium cockerel in Goldens was a dandy bird. In fact, the class as a whole was more than good.

Silver Campines, another big class. First cock in this class stood out in fine shape and color. This bird has a reputation of always taking the "blue," matter not the company.

There were some Exhibition Games, but not many. What Games showed were very good in Pyles, Black and Brown Reds with a few Sumatras.

Japanese Silkies were all there to the good, while a few Sultans came forth to either look at the crowds or be looked at.

Rose Comb Rhilanders were on hand, and being a German fowl, they were handed over to A. G. Goodacre, a good

There's a Reason Why!!

Black Orpingtons are Best and

Foxhurst Black Orpingtons ARE CHAMPIONS

1st—Because of their unprecedented wins at greatest of all poultry shows, Madison Square Garden, New York, for the past eight years. Defeating the world's best birds.

2nd—Because our customers have won with Foxhurst Strain in practically every show of importance in America during the same period.

3rd—Because we have proven with our line bred birds, by experiments extending over 14 years, that no breed excell them as early pullets or winter layers properly handled.

4th—Because in flavor they are surpassed only by a game bird and in flesh are the equal of any capon. Will positively stand any climate and all successfully breed at eight years of age.

REMEMBER! quality considered, our prices defy competition. Show Birds to win in any exhibition now ready. Shipped on approval and money back guarantee. Catalog.

FOXHURST FARM

LIME ROCK, CONN., U. S. A.

Englishman, to place the awards.

Missouri got her name on the pillar of fame by sending some birds that were called "Missouri White Fluffs."

Single Comb White Sherwoods were on hand and so were Japanese Long Tailed Onaga.

Buttercups were a very good class of birds.

The Bantam class was large and varied from Games to Sebrights, with a goodly bunch of Cochins and Brahmas thrown in. To describe this class would take too much space, but in every class the judges found birds that were worthy of first premiums, and when the great number of varieties are taken into consideration, that is going some.

ROCKY FORD, COLO.

1915 Revised Edition

American Standard of Perfection

This great book has just been revised and it gives you the correct Standard Shape, Color and Weight of every recognized variety of poultry, including the new breeds that have been admitted. You will also find the disqualifications of each variety.

YOU CANNOT

raise, mate, exhibit or sell fowls intelligently without it. It contains ideal illustrations of the different varieties of fowls photographed from living models and gives the correct color of plumage on your birds. It's your guide to success in the poultry business. No one can breed fowls for exhibition without a copy of the *American Standard of Perfection* as a guide, and it is the only book of its kind published in this country; authorized, copyrighted and published by the A. P. A. Price postpaid, cloth, \$2.00; leather, \$2.50.

SPECIAL OFFER

American Standard of Perfection (cloth) **\$2.50**
and American Poultry Journal for 1 year

If you want leather binding add 50 cents to this price. Canadian subscribers add 25 cents per year for postage; foreign subscribers add 50 cents per year for postage.

Hubbard's Poultry Secrets

Written by Charles Hubbard, Manager of Foxhurst Farm, a man whose reputation is known to every exhibitor at Madison Square Garden. Disclosing to the public every secret Mr. Hubbard has used in placing Foxhurst Farm Black Orpingtons, the undisputed Champions of the World, as shown by the twelve consecutive years' record at Madison Square Garden.

This book has a handsome de-luxe cloth binding, and contains 130 pages, 20 cuts, and gives all of Mr. Hubbard's up-to-date secrets, from the shell to the show room, which has never stood defeat. Mr. Hubbard's secrets apply to all standard breed poultry. His chart of line breeding alone is worth many times the price asked for the book, which is \$2.50. Address

CAUTION: Any Bone Cutter claiming to be MANN'S without F. W. MANN CO. cast on its surface, is an imitation. The genuine MANN'S is made only in Milford.

Make Your Hens Lay

When Eggs Are Worth Most

HENS relish juicy bugs and worms because these supply the protein feed they require to make eggs. The craving for meat and bone food—protein feed—is simply nature working out the egg-laying proclivity. Hens **must** have food rich in protein or egg-making elements, or it will be impossible for them to lay.

Our little book tells you all about the how and why of this. It makes you master of egg-getting. It's a book that opens up to you the real possibilities with poultry.

It's simply a matter of knowing what food to supply and how to prepare it. It is now established beyond all doubt that raw, green bone, with adhering meat and gristle, cut fine, is the ideal egg-producing food. Its cost is a mere trifle and its preparation is easy with a

Mann's Latest Model Bone Cutter

Sold On 10 Days' Free Trial—No Money Down

It turns easily and rapidly, cutting green bone, with adhering meat and gristle, wasting nothing.

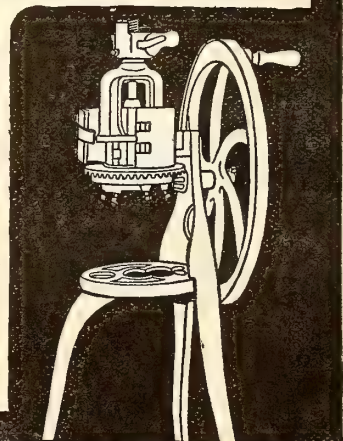

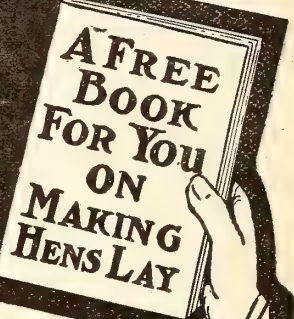

Its self-governing feed automatically adapts the cutting to your strength, so that anyone can use it.

Its open, hinged cylinder is easily cleaned, and it takes in large bones. It is strong, durable, and requires few repairs. We want you to try one.

We will send you a Mann's Latest Model Bone Cutter on **10 Days' Free Trial**—no money down. If satisfied **after the trial**, buy it. If not, return it **at our expense**.

You want our good books, at any rate, send for them. We'll forward by return mail.

Oat Sprouter \$2

For \$2.00 you can build the simplest, most efficient, easiest to operate and very best oat-sprouter ever constructed. A boy can make one in an evening with no tools but a saw and hammer. Cost of operation for a 40-hen size less than 7c a month. There are thousands in successful operation. Plans with plain directions for building, 25c postpaid.

I. PUTNAM, Route 105 ELMIRA, N. Y.

Look Out

for Chicken Thieves!

Examine your birds and see if lice are not robbing your poultry of health and vitality, and yourself of profits. Get the Old Reliable

LAMBERT'S

DEATH TO LICE POWDER

(6)

It knocks these thieves out quick. Will not injure eggs, hens or chicks, nor soil plumage. Sold in 10c, 25c, 50c and \$1.00 sizes. Latest copy of Lambert's "POCKET BOOK OF POINTERS" for 2c stamp.

THE KLEIN-LAMBERT CO., 501 Traders Bldg., Chicago

As many eggs in Winter as you get in Summer

Hens lay winter eggs freely if fed chopped Green Bone. Follow the Experts for Success.

Stearns' GREEN BONE CUTTER

Just the right food elements and cut fine enough for the smallest chicks. Fastest, easiest running cutter on the market. Hand or power machines for flocks of all sizes, \$6.00 up. Send for FREE Book—"How to Make Poultry Pay"—tells just how the Experts get big winter egg results. Save money and send for the book now.

E. C. STEARNS & CO., Syracuse, N. Y.

LOOK!

See that disc way up above tank, temperature 106 and going up!! Eggs drying, germs roasted!! Happens daytime, midnight or any time at all, but **could not happen** with Universal Heat Check "H" attached. (see cut). Simple, effective and durable. \$1.00 each.

Makes watching the thermostat unnecessary. No fretting nor stewing, besides valuable time saved for other work. Prevents cold eggs. Prevents overheating. Works automatically both ways. On the job every minute, from first day of incubation till last chick is out. Lessens fire risk by controlling high heat which also helps to retain moisture. We send it upon your order. Attach it yourself.

Guaranteed to be just as represented. Parcel Post, or ask for further description. Universal Heat Check

Agency 65 Buffalo, N. Y.

Correct Coal-Burning Hover \$11.85

Greatest Coal-Burning Hover Ever Invented—Self-Feeding, Self-Regulating, Everlasting.

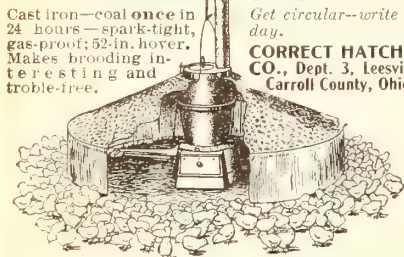

50 to 1500

Cast iron—coal once in 24 hours—spark-tight, gas-proof; 52-in. hover. Makes brooding interesting and trouble-free.

CHICKS

Get circular—write to day.

CORRECT HATCHER CO., Dept. 3, Leesville, Carroll County, Ohio

WINNERS FOR YOU

If you are looking for ribbon winners, or just layers, we can supply you. Our record of wins for this season is proof positive that our birds have the class.

DUCKS

We have a special December price on 100 Pekin ducks. These are real bargains, as some of them are ribbon winners at late shows.

GEESSE

Our geese this year have been exceptionally fortunate, winning at all the big Fairs. We have several varieties and the prices will suit your pocketbook.

TURKEYS

We can give you real bargains in Bronze, Bourbon Red and Narragansett turkeys. Write your wants.

CHICKENS

Before buying elsewhere, let us quote you prices. We have several varieties, including Plymouth Rocks, all Leghorns, Wyandottes, Minorcas, Brahmas, Houdans and several others.

If you want to save money get our prices.

What a Dime Will Do

We have a few hundred copies of that famous book

The Home That Was Built by Hens

By UNCLE CAL STODDARD

In order to close out this edition we will mail you paper bound copy for 10c or cloth bound copy for 25c. They will not last long at this price, so order your copy today. The following is a summary of this great book:

A few years ago a big Transportation Company decided to reduce operation expenses, and as sometimes happens the "axe" fell on one of the oldest and best of the company's employees, Ned Campbell, the foreman of the operating department.

It was a hard blow to Ned, coming, as it did, just before Christmas, and to make matters worse, his wife was just recovering from a long spell of sickness.

Well, Ned and his wife got their heads together—the bank book was brought out and they found they had just \$900.00.

What to do was the next question. Well, he answered it. Answered it so well that he published a little 75-page book; it is a most fascinating little story, and it points the way to success in that great big billion-dollar poultry industry.

It is an unusual book, widely different from all other poultry literature—it is based on actual facts, and the light, breezy manner in which the story is told holds your attention from start to finish.

The appendix in this book gives complete feeding formulas, symptoms of, and remedies for, poultry diseases. Handsomely illustrated by Leonard K. Stahmer. Or send 35c and you will receive paper bound copy of *The Home That Was Built by Hens*, and paper bound copy of 1914 Year Book.

Send cash with order.

Bourne Mfg. Co., 231 Howard St., Melrose, Mass.

SUCCESSFUL EGG FARMING

200 Eggs
A Year
Per Hen

How to Get Them

The eighth edition of the book "200 Eggs a Year Per Hen," is now ready. Revised, enlarged, and in part re-written; 96 pages. Containing among other things the method of feeding by which Mr. S. D. Fox of Wolfboro, N. H., won the prize of \$100 in gold offered by the manufacturers of a well-known condition powder for best egg record during the winter months. Simple as a,b,c—and yet we guarantee it to start hens to laying earlier and to induce them to lay more eggs than any other method under the sun. The book also contains a recipe for egg food and tonic used by Mr. Fox, which brought him in one winter day 68 eggs from 72 hens; and for five days in succession from the same flock 64 eggs a day. Mr. E. F. Chamberlain, of Wolfboro, N. H., says: "By following the methods outlined in your book I obtained 1,496 eggs from '91 R. I. Reds in the month of January." From 14 pullets picked at random out of a farmer's flock the author got 2,999 eggs in one year—an average of over 214 eggs apiece. It has been my ambition in writing "200 Eggs a Year Per Hen" to make it the standard book on egg production and profits in poultry. Tells all there is to know, and tells it in a plain, common-sense way.

Price 50 cents; or with a year's subscription to **AMERICAN POULTRY ADVOCATE**, both for 75 cents; two-years' subscription and book for \$1.00, or given free as a premium for two yearly subscriptions at 50 cents each. Our paper is handsomely illustrated, practical, progressive and up-to-date on poultry matters. Established 1892. 44 to 132 pages monthly. 50 cents a year, 3 months' trial 10 cents. Sample copy free. Catalog of poultry literature free. Address

Sure Death

for chicken mites

and lice with "FUMOTH" FUMIGATORS

is a new, easy and quick way. No more spraying and exposing oneself to these mites. Two required for a 10 or 12 foot house; one fumigation cleans them all out. Requires only a half hour to do the fumigation and it is play—not work.

The fumigants into all the cracks and crevices and permeate the straw, killing every insect, which is not possible with spraying. No after odor remains—can return fowls immediately afterward. Fumes kill instantly and not by suffocation. No sulphur or formaldehyde and not dangerous to man. Used by prominent poultrymen. 2 for 25c, 5 for 50c 12 for \$1.00 postpaid. Money refunded if not satisfactory. Also kill Mosquitoes and House Moths. Order today or send for circular.

A disinfecting
germ-killing white paint

ARBOLA

at less than 10c a gallon

Use it wherever you now use white-wash

It paints a snow-white on wood, brick, stone or cement surfaces and won't scale or peel off. Kills lice, mites and all other parasites, besides keeping the germs of roup, cholera, mange and foot-and-mouth disease, etc., from becoming epidemic. Can be put on with a brush or sprayer. It is non-poisonous and its effect is lasting.

SPRING WATER POULTRY FARM

Rural Delivery No. 1 STOCKTON, NEW JERSEY

I've Been Building Incubators So Long that they call me the Daddy of Artificial Incubation

Principal
Not connected with
any other company.

When incubators were new I built them so good that

my customers of those days are my customers today. From the very first I built the best incubator I knew how. It was the best incubator possible to build. My incubators today are better than they were then because I have learned how to build them better. Today my machines have no equal for hatching a strong, vigorous chick from every hatchable egg, for economy of fuel and labor, for appearance and for durability. And, best of all, for you

THE NEW BUFFALO INCUBATORS

and BROODERS, too

Let me tell you how one customer makes an income of \$1,569.89 with a Buffalo Equipment.

Here's a "human interest" story. Mr. Carter, a carpenter, after a long spell of sickness, that left him almost a cripple, undertook to make a living with poultry.

The fourth year he carried over 550 layers. The market eggs were all sold through a commission house. The yearlings brought 75¢ each. A few hatching eggs were sold. The total receipts were \$2,793.07. The total expenditure for the year was \$1,228.18. The net profit on the investment and labor \$1,569.89.

Everyone interested in making money out of poultry should ask for our circular.

are just as well built as any Standard Incubator on the market but cost 25% to 33% less. You do not need to pay more than my price for the best incubator your money can buy. You cannot get more real value no matter how much you pay.

The Buffalo Colony Brooder is a complete Home Chicken Raiser. Can be operated without shelter when it is 10 degrees below zero.

The New Buffalo Coal-Heated Brooder Stove and Hover, Price \$15, will brood from 100 to 1,000 chicks for less money than lamp-heated hovers. The control on this stove is perfect, and it requires very little attention.

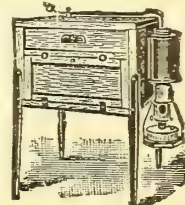

Write for my circular now before you forget it.

F. O. WELLCOME, Box J, YARMOUTH, ME.

**Mr. Poultryman—What would you give to say this?**

"I have tried various patent chick feeds, but consider your H-O Steam-Cooked Chick Feed the best I have ever used, being composed of a variety of sweet, wholesome grains without the usual excessive amount of cracked corn.

"I did not lose a single chick from bowel trouble and was never so successful before in raising a lot of healthy, vigorous chicks, and next year I shall use your chick feed again."

G. A. H., CANAL FULTON, O.

The above is only one of many testimonials received in regard to H-O Steam-Cooked Chick Feed. It is typical in that it repeats in *actual results* what we claim for H-O Steam-Cooked Chick Feed.

H-O Steam-Cooked Chick Feed

contains cut oatmeal. Being particularly dry, it keeps for a surprisingly long period in a sweet and wholesome condition. It is steam-cooked and hence easily digested when the chicks are only a few days old.

More poultrymen are using H-O Steam-Cooked Chick Feed each year because it saves the chicks. Will you try it on this year's brood?

Write for free sample, prices and descriptive folder.

Never Before
Published!

In this book J. Willard Bolte, B. Sc. in Ag., tells of his 15 years' experience with poultry.

He tells—

How to Increase the Winter Egg Yield
How to Fatten Fowls
How to Get Fertile Eggs
How to Cure Egg Eating
and many other valuable egg pointers.

This book—full of useful poultry information is sent free by the manufacturers of

Darling's Meat Crisps

A clean, wholesome Meat Feed—recommended by expert poultrymen. Contains 50 per cent more protein than meat scraps—increases your egg yield and fattens your chicks.

RABBITS

Tells all you want to know about Rabbits. Our book: "The Rabbit; How to Select, Breed and Manage the Rabbit and Belgian Hare for Pleasure or Profit," by breeders of long experience with rabbits. Sixth edition, nicely illustrated, enlarged and much improved. Price 25 cents with sample copy of the AMERICAN POULTRY ADVOCATE containing Belgian Hare Department, Poultry Advocate Dept. 252, Syracuse, N.Y.

YOU RAISE POULTRY FOR PROFIT?

Then why let your hens break and destroy more than \$5,500,000 in broken and spoiled eggs in one year?

This is what the State of Illinois lost in the year of 1913 according to official reports.

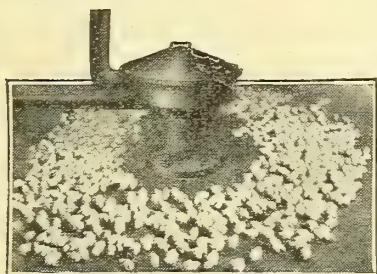

This can be avoided by using Irwin's Faultless Hens Nest.

Free particulars sent on request.

DON'T DO IT

You cannot afford to spend your good money for brooding or incubating equipment until you have read our literature explaining the chick, labor and cost saving advantages of the new, truly automatic

Duplex Brooder Stoves and Incubators

They have wonderful new features. Our improved burner is a wonderful fuel saver and is as safe as a stove can be. Our perfect automatic heat control, the perfect system of warm air automatic ventilation in both brooder stove and incubators are worth investigating. The improved Duplex can be operated with less labor, is perfectly reliable, and costs less to operate than any brooder stove on the market. Don't take chances with slow burning fuel and its attendant danger of gas and fumes. The Duplex can be installed at a less cost and will give you better satisfaction.

Sold under Thirty-Day Free Trial Guarantee

Free Booklet. Don't install any equipment before you read this booklet. It explains colony brooding in detail; why it is so successful; why the Duplex eliminates white diarrhoea; has valuable information about Duplex Incubators. Write us a letter, telling your plans, and we will give you a personal letter inclosing building plans and other information you may want. It's free. Write today.

DUPLEX COLONY BROODER CO.

Box 701

Rockford, Ill.

color; females not as rich in color and not as good in type as 1st pen females. 3d young pen, Elton C. Mahon; male and females of this pen are not as evenly matched, nor of as good type and color as 1st and 2d pens.

LIGHT BRAHMAS.

First cock, J. W. Shaw; grand type and color thruout, good comb and eye, outstanding in the class. 2d cock, Roy R. Beck; good type, losing to 1st bird in color. 3d cock, Geo. M. Layman; fair type and color thruout, good eye and comb, shown in fine condition.

First hen, J. W. Shaw; especially fine in both type and color, good eye and comb. 2d hen, J. W. Shaw; good color, fair type, fair head points. 3d hen, Harvey C. Wood; good type, not as well marked as 1st and 2d, fair eye and comb.

First cockerel, J. W. Shaw; grand type and color thruout, good comb and eye, outstanding in class. 2d cockerel, J. W. Shaw; good type, not as well marked as 1st bird, not fully finished. 3d cockerel, Roy R. Beck; fair type and color, not shown in as good condition as 1st and 2d bird.

First pullet, J. W. Shaw; grand type and good color, fair comb and strong eye. 2d pullet, Harvey C. Wood; losing to 1st in type, fine color, good comb and fair eye. 3d pullet, J. W. Shaw; good type, losing to 1st and 2d in color, good eye and comb.

First old pen, Harvey C. Wood; contains one of the grandest cock birds seen at this show, both in type and color he is outstanding; mated to him are four wonderful females of true Brahma type, showing wonderful hackle and tail lacing. 2d old pen, Wm. T. House & Son; cock and females in pen are excellent in quality, in most classes they would easily be winners; cock bird nearly as good in type as 1st pen cock bird; females not quite as evenly matched. 3d old pen, Geo. M. Layman; contains cock bird and four females of very good type and color, very close third.

First young pen, Harvey C. Wood; cockerel of this pen shows remarkable type and wonderful color in all sections; to him are mated four females, fine in shape and color. 2d young pen, J. H. Fowlie; cockerel of this pen is of fine type and color, not being quite as well marked as 1st pen cockerel; females of very good color and fine shape, evenly matched. 3d young pen, Mrs. W. G. Robinson; cockerel in pen is an excellent specimen in both shape and color; females of good type and color, in ordinary competition this pen would be wearing the blue.

DARK BRAHMAS.

First cock, Shoemaker Poultry Farm; fair type and color, light eye. 2d cock, Bachelor Button Kennels; losing to 1st in both type and color, good head points thruout.

First hen, Shoemaker Poultry Farm; good type and color thruout. 2d hen, Bachelor Button Kennels; good color and fair type. 3d hen, Bachelor Button Kennels; losing to 1st and 2d in both type and color.

First cockerel, Shoemaker Poultry Farm; good type, fair color, good head points thruout. 2d cockerel, Shoemaker Poultry Farm; fair color and type little gray in fluff.

First pullet, Shoemaker Poultry Farm; fair type and color. 2d pullet, Shoemaker Poultry Farm; losing to 1st in both type and color, rather under-size.

PARTRIDGE ORPINGTONS.

First cock, Blue Ridge Farm; fair color and type, light eye.

First young pen, E. F. Schmidt; fair type and color thruout.

BUFF MINORCAS.

First cock, E. F. Schmidt; fair type and color. 1st hen, E. F. Schmidt; fine even shade of buff, good type. 1st cockerel, E. F. Schmidt; good color, fair type, not shown in best of condition. 1st pullet, E. F. Schmidt; good color, not in show condition.

S. C. BLACK MINORCAS.

First cock, Chas. G. Pape; fine stationed bird thruout, well placed. 2d cock, Chas. G. Pape; some larger than 1st bird, too broad across the back. 3d cock, John L. Brown; good in type and

RED SUSSEX.

First cock, Red Sussex Farms; excellent type and color, winning color special. 2d cock, Houston & Hofius; not quite as good in color, good in back and tail shape, little weak in breast shape. 3d cock, A. & E. Tarbox; good in color, excellent in type, not as good in wing color.

First hen, Houston & Hofius; fine in back and tail shape, excellent in color. 2d hen, A. A. Carver; fine in type, good in color, fine in head points. 3d hen, Red Sussex Farms; excellent bird in color, fairly good in type, not quite as good in tail shape.

First cockerel, Houston & Hofius; very fine bird in color and type, good head points, excellent in carriage of tail. 2d cockerel, Red Sussex Farms; excellent bird in color and type, fine in head points, not fully matured. 3d cockerel, A. & E. Tarbox; fine in color and type, good in back and tail carriage, but not finished.

First pullet, Houston & Hofius; very fine bird in back and tail carriage, good head points, excellent in color. 2d pullet, Red Sussex Farms; excellent in color and type, fine in head points, not quite as large. 3d pullet, Red Sussex Farms; excellent in type, shape of back and tail carriage, not quite as good color.

First old pen, Red Sussex Farms; pen well matched, excellent in color and type; male bird extra fine. 2d old pen, Houston & Hofius; male bird fine in type and color, hens not as even in color but fairly good. 3d old pen, A. A. Carver; a well-matched pen with a good male, but hens not as good in color.

First young pen, A. A. Carver; a well-matched pen of excellent color; male fine in color, good in back and tail shape, little high on legs. 2d young pen, Houston & Hofius; a very fine male; females not as good in color, not quite as good in size. 3d young pen, Red Sussex Farms; very fine pen in color and type, but unfinished.

SPECKLED SUSSEX.

First cock, A. C. Williams; excellent color, fine in ticking of neck and saddle. Fine in breast color. 2d cock, Rawnsley-Shields Poultry Farm; good type, extra fine in color, good in head points, fine in tail carriage. 3d cock, A. & E. Tarbox; good in back, tail shape, good in breast shape, not quite as good in color.

First hen, A. C. Williams; fine hen of excellent type, good in color, fine in back shape and carriage of tail. 2d hen, Rawnsley-Shields Poultry Farm; fine type, extra good in back and breast

color, head points good. 3d hen, Red Sussex Farms; excellent color, good type, not quite finished in tail.

First cockerel, Rawnsley-Shields Poultry Farm; this cockerel is a wonder in type and color, the best male ever shown. 2d cockerel, Rawnsley-Shields Poultry Farm; a bird of good type, fairly good in color, not as good size as first. 3d cockerel, T. J. Rountree; good back and tail shape, good in head points, not as good in color.

First pullet, Rawnsley-Shields Poultry Farm; bird of good size, excellent in type, fine in back and tail carriage, color good. 2d pullet, Rawnsley-Shields Poultry Farm; not quite as large but of fine type, back and tail carriage, color excellent. 3d pullet, T. J. Rountree; fairly good in color, good in back and tail shape, bird not quite finished.

First old pen, Rawnsley-Shields Poultry Farm; pen is well matched with an excellent male of fine color and type. 2d old pen, A. C. Williams; very fine male of good type and color; females not quite as evenly matched. 3d old pen, Red Sussex Farms; females very fine in color and type, well matched but not as good in male.

First young pen, Red Sussex Farms; a very even and well-balanced pen; pullets of fine color and type, with an extra fine male and color and back and tail shape, head points fine. 2d young pen, Rawnsley-Shields Poultry Farm; a very fine, even matched pen of females and very fine male, not quite as good as male in 1st pen. 3d young pen, A. C. Williams; male of good color and type; females well matched, but not quite as good in color.

LIGHT SUSSEX.

First cock, Houston & Hofius; light, fine bird of excellent type and color. 2d cock, Houston & Hofius; fine in back and tail carriage, not quite as good size as 1st.

First hen, Houston & Hofius; large, type hen, fine in breast shape, good in neck and tail markings. 2d hen, Houston & Hofius; very fine hen and good type, not as good in neck and tail color.

First cockerel, Houston & Hofius; fine in back and tail markings, good in breast shape, good in head points and color of neck. 2d cockerel, Houston & Hofius; not quite as well finished, with a fine color and type.

First pullet, Houston & Hofius; very fine pullet of excellent type and color, very fine in neck and tail markings. 2d pullet, Houston & Hofius; good in type and color, not quite as good in neck and tail.

First old pen, Houston & Hofius; a

well-matched pen of good color and type, females having extra good color in necks.

First young pen, Houston & Hofius; fine evenly matched pen, headed by male with exceptionally good color in neck and tail.

BUTTERCUPS.

First cock, Dr. M. A. Hansen; generally good bird thruout. 1st hen, Dr. M. A. Hansen; good type and color, especially good head. 2d hen, H. W. Court; fair color and type, not finished. 3d hen, H. W. Court; better condition than 1st, long back, well spread tail.

First cockerel, W. C. Brunig; good type and color, shape and color special. 2d cockerel, T. J. Eulette; good type and color, fine head. 3d cockerel, H. W. Court; good color, losing in shape to 1st and 2d.

First pullet, A. L. Malsch; good in type and color. 2d pullet, Wm. Freise; fair type and color, good head. 3d pullet, H. W. Court; good color and type thruout.

BUFF LEGHORNS.

First cock, Dr. L. E. Heasley; especially good head points, pleasing buff color, good saddle, color special. 2d cock, Dr. L. E. Heasley; very large bird, good carriage, strong even golden buff in color. 3d cock, H. Lester Farnum; good type, heavy color, trifle short on legs.

First hen, Dr. L. E. Heasley; especially fine hen, good color and type, shape and color special, trifle short on legs. 2d hen, F. Purdy; long back, lighter shade of buff than 1st, good type. 3d hen, H. Lester Farnum; fair color, not as good type as 1st and 2d hens, fine head points.

First cockerel, Dr. L. E. Heasley; even shade of buff thruout, good type, low tail, fair comb, especially good in leg color. 2d cockerel, Dr. L. E. Heasley; fair color, extra good head points, not quite finished. 3d cockerel, H. Lester Farnum; heavy color, fair type thruout.

First pullet, F. S. Smith; good head, well spread tail, good color. 2d pullet, Dr. L. E. Heasley; good even color, long back and low well-spread tail. 3d pullet, F. Purdy; fair color, not as good type as 1st and 2d pullets.

First old pen, H. Lester Farnum; a little large in size, fair color and type; females well matched. 2d old pen, Dr. L. E. Heasley; male of good color, fair type; females well matched, good even shade of buff. 3d old pen, Dr. L. E. Heasley; male good type and color; females larger than those of 1st and 2d pens, good type, also large combs.

Norwich-Feeding Proven Better Than Hand-Feeding

No one disputes the fact that the use of Norwich Automatic Feeding Appliances reduces labor and saves feed. Here is official proof that these machines also produce better results than hand-feeding.

All layers in the four completed North American Laying Competitions have been fed by Norwich Automatic Feeders; in the two Connecticut Competitions practically the same ration was used but was hand-fed. Now note the average production of the entire flock by years:—

North American Competition:—	154; 156; 170; 165
Connecticut Competition:—	144; 151
Average N. A. Competitions, with Norwich Feeders:—	167½ eggs per hen
Average Connecticut Competitions, hand-fed	147½

Proven gain from use of Norwich Automatic Feeders, 20 eggs per hen.

With eggs valued at 3 cents each, this amounts to 60 cents per layer, or \$600 for a flock of 1,000 hens.

TEST NORWICH AUTOMATIC EQUIPMENT AT OUR RISK

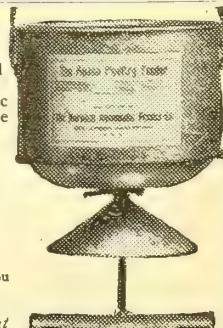

Use one or many of our feeders for 30 days. If you are not satisfied with results, return feeders and your money will be refunded. Can you afford to hesitate when we offer to prove at our risk that you can secure better results?

Most live dealers in poultry supplies will furnish Norwich Equipment on the above terms. If necessary we will ship direct on your order.

SPECIAL OFFER Our new Apaco Feeder, 12-quart capacity, is similar in action to the Norwich Automatic Feeder, but is specially designed for owners of small flocks. For One Dollar we will deliver an Apaco Feeder to any point in the U. S. east of the Mississippi; \$1.30 beyond that point. Order today and feed your layers right!

Our big illustrated catalog mailed free on request

THE NORWICH AUTOMATIC FEEDER CO., 21 Trumbull St., New London, Conn.

Smith's S. C. Buff Leghorns I HAVE NO OTHER BREDS

The largest and best breeder of Bufts in the world, winners at fifteen of the largest shows, including Hagerstown, Chicago and the World's Fair at San Francisco in 1915. My birds are show color and type and are bred to lay the year around. I have taken great care in producing great layers and show birds for the past 17 years. Can furnish breeding stock, baby chicks and eggs by the thousands.

BOURBON RED TURKEYS—Willis Campbell, Atlantic, Ia., 1 on trio.

THE NORWALK, OHIO, SHOW.

We recently enjoyed an afternoon spent at this show which contained over 700 birds and was one of the largest ever held in the state outside of the larger cities. The officials in charge of this event are real hustlers and it is no wonder that their show proved such a success.

J. E. Grant officiated as judge and his work gave entire satisfaction.

The Partridge Rocks were the feature of the show and this class consisted of about 100 entries and the quality was a real treat for those fanciers fortunate enough to have been in attendance.

Barred, White and Buff Plymouth Rocks, fair sized classes and quality good. The same can be said of White Wyandottes. Balance of Wyandottes, rather light in numbers, but some excellent birds among the winners.

S. C. and R. C. Reds were conspicuous by their heavy entry and the high quality of the winners. Awards on these pretty well split up among the different exhibitors. The Asiatic class was represented by a small but really select exhibit of White and Black Langshans. S. C. White Leghorns, fair in numbers; quality among winners strictly first class. S. C. Brown Leghorns, about the nicest class we have seen in this section for some seasons. Buff and Duckwing Leghorns, small classes, but quality was good. There was quite an entry of Black Leghorns and the winners were high class. There was a nice lot of Anconas; this variety seems to be steadily growing in popularity. S. C. and R. C. Black Minorcas and Andalusians, small classes of good quality.

Dark Cornish brought out the biggest entry in the English classes and there were some stars among the winners—noticed some excellent birds among the White and the Red Laced Cornish. Orpingtons, small classes, winners good. Some nice Red and Speckled Sussex were shown.

LIST OF AWARDS.

BARRED PLYMOUTH ROCKS—Oscar D. Fox, Wakeman, 1 cock, pen, 2-4 ckl., 3 hen, 2 plt.; Chas. McClave, New London, 2 cock, 1 hen; E. O. Ansted, Elmore, 1 cock, 2-4 hen, 1-4 plt., 2 pen; Grigsby & Richards, Gloucester, 3 plt.; H. H. Haskins, Wakeman, 3 ckl.

Why Hens Stop Laying

E. J. REEFER, the poultry expert, is giving away, FREE, a valuable book explaining how every farm and backyard hen can be made to produce 200 eggs per year. The book contains scientific facts of vital interest to every poultry raiser. Write today for one of the valuable books—FREE.

E. J. Reefer Dept. 3811
Reefer Bldg. Kansas City, Mo.

DR. PRINCE T. WOODS' NEW BOOK How to Raise Chicks

INCLUDING REVISION OF "FACTS ABOUT WHITE DIARRHOEA"

A down-to-date manual on breeding poultry, getting hatchable eggs, incubation and brooding both natural and artificial, preparing chick foods, feeding chicks, how to raise chicks and how to avoid and prevent disease and losses. Told in plain language. Illustrated with reproductions from photographs and pen drawings. Tells how to make your own brooders and chick foods. Written by a man who knows how and how to teach others. 88 pages, 35 illustrations and 5½x8 inches in size. Printed on good paper. Well and durably bound in cloth.

**A Book for Everybody Who Keeps Fowls or Grow Chickens
Whether Beginner or Old Timer in the Field of Poultry Work**

It has ten chapters: Chapter I—Selecting and Mating Breeding Stock. Chapter II—Food, Vegetable, Animal and Mineral. Chapter III—Fowls and Food. Chapter IV—Care and Management of Breeders. Chapter V—Eggs for Hatching. Chapter VI—Incubation, Natural and Artificial. Chapter VII—Brooding with Hens and with Brooders. Chapter VIII—Chick Foods and Feeding Chicks. Chapter IX—Growing Chicks. Chapter X—Facts About White Diarrhoea. What white diarrhoea is. Symptoms of disease. Causes. Is there more than one form? Has germ of specific disease been found? Infection. Prevention. Treatment. Formula for a simple remedy which has proved effective in many cases in many climates for four years.

Here is a book devoted to chick comfort and to more and better chicks, 75 cents per copy postpaid. Learn to save your chicks; that means more profit; Dr. Woods tells how; send for the book now, only 75 cents, cloth bound.

75c per copy, postpaid; with American Poultry Journal, one year, only \$1.40. Canadian subscribers add 25c for postage, foreign 50c.

American Poultry Journal, 542 South Dearborn St., Chicago, Illinois

"WHY I BREED SINGLE COMB BLACK MINORCAS."

Can You Remember When You Bought Cabbage by the Head and Apples Two for Five?—Have You Bought Either Lately?—Eggs Should Be Quoted by the Pound and the Time Is not Distant When They Will Be Sold that Way.

By DEAN HARR, Wichita, Kas.

THIS is the day of specialists. The "Jack of All Trades" is a thing of the past. Poultry farming is specialty farming. Egg farming is specializing in one detail of poultry farming. Therefore, in selecting the Single Comb Black Minorcas I feel I am specializing in one branch of specialty farming.

Having eggs for my goal, I selected a non-sitting Mediterranean breed which is acknowledged a laying breed. Knowing that one necessarily has to dispose of culls, old stock, etc., I selected the S. C. Black Minorca I cause they have the weight of the larger breeds combined with the egg laying capacity of the smaller breeds. They dress white and the meat is sweet and well flavored and commands the top price on the market. Unlike the Leghorn and other fowls of the laying breeds, when you kill a Minorca broiler, fryer or old bird, you have a large, well-meated fowl for your table.

I have heard and read objections to the black-feathered fowls, on the grounds that the pin feathers are hard to get out, and the picking is difficult. The color of the feather has nothing to do with the removal of the feather, and I am inclined to believe there is a little laziness behind this assertion. I will admit a black pin feather is easily seen and for this reason must be gotten out, while white ones may possibly be left in and not noticed. But when you eat that good "chicken pie" you do not eat as many pin feathers, as they were black and had to be removed.

Meat Scraps. Most of that fine meat dust you usually find in meat scraps has been sifted out.

Mostly coarse, hard, gritty and nourishing food is left.

That's why they go twice as far and cost less in the end for you to feed.

"Magic" Meat Scraps Contain 55% Protein

Before you buy meat scraps or a meat food of any description, write for samples of "MAGIC" Meat Scraps. Compare them with any others.

See for yourself why "MAGIC" goes farther and makes your hens lay more eggs. Write today for sample, price and name of dealer nearest you. We sell direct where we have no dealer.

Chicago Feed & Fertilizer Co.
Dept. 20, 810 Exchange Ave.
Union Stock Yards Chicago, Ill.

"Makes Hens Lay"—Better

Can you imagine anything prettier than a flock of Single Comb Black Minorcas with their beautiful green sheen, large white oval ear lobes and magnificent blood red combs and wattles? And when the Minorca hen announces the glad tidings that an egg has been deposited in the laying house, you do not find a little undersized, discolored egg, but a fine, large, white one that at times will rival the duck egg in size, and which tips the scale beam heavier than does the egg of any other hen.

Can you remember when you used to buy cabbage by the head and apples, two for five? Have you bought either lately? The grocer saws two, three or five cents per pound now. This is right. Eggs should be quoted by the pound, and I believe the time is not far distant when we will buy them that way. When this happy thought materializes, the breeders of Single Comb Black Minorcas will reap the harvest that they justly deserve.

The broiler specialist and the fancier can find no breed that will come as near meeting all requirements as does the Minorca. The young stock develops rapidly, is easily fatted and conditioned for the market. The capon can be made to weigh from fourteen to sixteen pounds. Can you imagine this of a Leghorn, which is the only breed that can compete with the Minorca in egg production?

The Minorca will quickly adapt itself to free range or the city lot. It is not difficult to keep them confined, as they show no tendency to fly as long as the comforts and necessities of life are furnished. In fact as a breeder of Single Comb Black Minorcas, I know of no desirable quality they do not possess, except for the fellow who wants a setting hen, and he will have to look elsewhere for the lice-breeding setter.

"WHY I BREED SINGLE COMB BLACK MINORCAS."

They Are a Combination of Beauty and Utility, in Fact, the Weighing, Laying, Winning, Paying Breed of the Age.

By P. H. SCATES, Martin, Tenn.

SEVERAL years ago when quite a lad, I had some experience with a flock of mongrels belonging to my mother, and by studying carefully the poultry papers that came to my hands, I soon succeeded in bettering the flock as far as egg production was concerned, but I saw that in order to produce results worth while I would have to have a breed that would respond more readily to the attention given it, and one that was naturally an egg-laying breed.

I induced my mother to make a purchase of Barred Plymouth Rocks. A neighbor had White Rocks, and another neighbor had Rhode Island Reds, so I took careful note of each of these flocks with the aid of my neighbors telling their experiences with them, and I still felt dissatisfied with these breeds. About this time I decided to purchase a setting each of S. C. B. Minorcas and of S. C. W. Leghorn eggs. I had fine success hatching both of these varieties, kept them separated while grow-

ing, and bred from them both when matured, carefully noting results all the time. I found that on the same amount of food, the Minorcas laid as well as the Leghorns and weighed more than the Leghorns, Rocks, Reds or Wyandottes, so I sold all except some fine specimens of Minorcas, and purchased additional stock from a well-known breeder of this variety, whose strain was noted for their egg-laying ability as well as their beauty and prize winning qualities.

I have heard it said by those who do not know Minorcas that they are wild, but I find them as gentle as Rocks and they respond to good treatment as well as the most domesticated breeds. I can feed them as much as they will eat, and then instead of turning it all into fat and standing around in the sunshine, they shell out the eggs. Whereas if the same food was given one of the less active breeds, they would get so fat they would not lay at all.

I can imagine no more beautiful sight in the poultry line than a thoroughbred flock of Single Comb Black Minorcas with their red combs, white ear lobes and glossy greenish black coat of feathers. I have found that by starting right with good stock I find less culls among Minorcas than any other breed I have attempted to raise. Minorca eggs command a premium on the local market of 20 per cent, as they weigh fully 33 1-3 per cent more to the dozen than do the ordinary eggs.

I have a friend who has several hens six years old that are now laying better than the dunghill pullets found in ordinary farm yards.

If you raise the S. C. B. Minorcas, you get as many eggs as from the most widely-known varieties of egg-laying breeds; the eggs you get weigh more. The Minorca weighs eight pounds when you get thru with her and want to put her on the market; while Leghorns I have had experience with do well to average three and one-half pounds.

The Minorca is a hardy chick, quick in growth. They make fine fryers, roasters, or broilers because of their tender, fine grained white meat.

Some folks kick because they do not like to dress a black chicken. Personally I would rather have a black one because my experience has been that with white or light feathered chicks we eat the feathers we do not see, while with the black-feathered varieties, we see them and remove them.

For the farm flock or the city back lot fancier, the Minorca cannot be beat. For the egg farm the Minorca cannot be beaten because when their egg-laying days and time of usefulness is over, you have the weight to sell and not a handful of feathers. This will more than offset the difference in food and if the eggs are for personal use, eight Minorca eggs will weigh as much as one dozen Leghorn or Rhode Island Red eggs. If fortunate enough to live near a good market, the large white Minorca eggs will bring a premium.

As for beauty, just go to some good show where there are good Minorcas on exhibition and you will have to admit that the looks are there.

They are a combination of beauty and utility, and in fact the weighing, laying, winning, paying breed of the age.

Associations and Shows

Secretaries are Requested to Send in News Items of Interest About Their Shows for This Department

PITTSBURGH SHOW.

The premium lists for Pittsburgh are now being mailed to every name we have on our mailing list. We do not send them promiscuously over the country, but we do send 5,000 copies to interested, hustling breeder-exhibitors who, if any way is found possible, will make a visit or an exhibit in Pittsburgh.

Many innovations will be in order. Among them will be the giving of gold watches instead of cups in all classes warranting the offering of so valuable a special.

Never before was there so much poultry enthusiasm and money in Pittsburgh as there is at this time. War orders have put money in every man's pocket and when these men happen to be poultry fanciers, it comes out again for birds and eggs.

Among other things urged in this year's premium list is the pricing of birds at an amount which fairly represents their value. Each year, many sales have been lost thru birds having been priced at fabulous amounts and their owners not being with their exhibits to lower the price to clinch a sale.

John G. Spencer, well known to show goers as the manager of Schenley Heights Poultry Farm, will serve as show superintendent.

We have not engaged all the judges in the country, but we have selected an extremely strong list, as follows:

W. H. Card, Maurice F. Delano, A. Fred Kummer, W. C. Pierce, H. P. Schwab, Len Rawnsley, J. Courtney Punderford, M. L. Chapman, Fred H. Cook, J. H. Eriser, Wm. F. Auerswald, J. N. Hazlett, J. H. Lewis, Geo. MacDonald. Come to Pittsburgh the week following Boston and we will guarantee you a time never to be forgotten. If your name is not on our mailing list, write at once. E. F. Baldwin, secretary, Crafton Station, Pittsburgh, Pa.

POULTRY WEEK AT OHIO STATE UNIVERSITY.

A very instructive and interesting program has been arranged for farmer's week to be held at Ohio State University, Columbus, January 31st to February 4th, 1916.

Many of the country's best informed and well-known speakers will lecture at this gathering. Principally among them is Prof. James E. Rice, Cornell University; S. T. Campbell, of Mansfield, O., secretary of the American Poultry Association; Charles McClave, New London, O., one of the country's best known judges; Henry Brownell, of Washington, O.; Freeman S. Jacoby, professor of poultry husbandry at the Ohio State University, and Milligan C. Kilpatrick, instructor at the same institution.

The subjects assigned to these well-known men are, indeed, interesting and instructive, and all who can possibly arrange should attend thruout the week.

Another interesting feature will be the Egg Show. Special premiums will be awarded the best eggs on display.

Another very important and instructive part of the program will be the moving pictures and lecture by Prof. Alford Vivian, showing slides made from 3,000 photographs, taken in traveling 42,000 miles while viewing twenty-one countries from a farmer's standpoint.

Practically all the buildings at the university will be utilized for this particular event. All lectures and entertainments are free.

Accommodations for room and board may be secured at reasonable rates.

It is earnestly desired that all farmers, in fact, every man and woman in this part of the country interested in poultry culture, will plan to attend thruout the entire week.

DAYTON, OHIO, SHOW.

Frank C. Stier, Pres., of the Ohio Poultry Breeders' Association, kindly prepared the following interesting account of the Dayton Show:

The most successful exhibit of The Dayton Fanciers' Club took place December 8 to 13, over 1,200 birds being shown. The State Meet of The Ohio Poultry Breeders' Association was held in connection, which naturally brought many state exhibitors and excellent quality. The American Poultry Association gold medal for best cockerel was awarded to a superb White Leghorn,

property of Bens & Tisdale. The \$10 in gold offered by The Ohio Poultry Breeders' Association for best pullet in show was awarded to a most handsome Light Brahma, property of Chas. McClave. The meeting of The State Association was perhaps the largest and most enthusiastic of any winter meeting, about 100 members being present, with Pres. F. C. Stier presiding. Plans for great activity thruout Ohio during the coming year were formulated. The most encouraging feature at the show was that over 100 new members were enrolled in the State Association under the new ruling of annual dues for all members.

SEEN AND HEARD.

At the Cuyahoga Falls (Ohio) Show, we found a strong up-to-date organization and everything was run very smoothly.

W. F. Shultz served as secretary, Chas. Gray, supt., F. H. Ricketts judged and his work was exceedingly good and created much favorable comment. His great willingness to explain the reason for his decision seemed especially to appeal to them.

White Leghorns had the honor of making up the largest class in the show, fifty-two birds were entered and the quality averaged high. White Wyandottes were second in numbers and consisted of fifty-one birds. The winners were first-class. One of the best White Wyandotte males in the show was in a pen that was disqualified because one of the hens had no spike in comb. Barred and Buff Plymouth Rocks, moderate sized classes of fair quality.

The first prize Buff cockerel, altho undeveloped, is a very promising bird, very good in color. The first White Rock cockerel is also worthy of special mention.

Buff Wyandottes, small class in numbers, but quality first-class, 2nd hen fine uniformity of surface color, but lost to first on type. Partridge Wyandottes, small but good class.

R. C. Reds were in evidence with a fair sized class and competition was quite keen, winners good. S. C. Reds were conspicuous by their absence.

S. C. and R. C. Brown Leghorns, Buff Leghorns, S. C. Black Minorcas, Andalusians, Golden Campines, were represented by fair sized classes and quality of most of the winners was good. The winning R. C. Black Minorca cockerel shows great promise. He was quite undeveloped, but he has the making of a real good one.

Noticed some nice White Orpingtons among the winners: in particular the first prize cockerel, a real classy bird in type and color. The second cockerel was fine in type, but lost to first on color. A fair sized class of Buff Orpingtons. The first pullet was a real nice in surface color. A small but good class of Dark Cornish were shown. Sussex were represented by a Red cock and hen of good quality.

Of all breeds of poultry none will stand the test of record keeping better than S. C. White Leghorns.

Leghorns Are Money-Makers

They are recognized everywhere as the commercial hen. They lay well in winter, and cost little to raise. They produce more eggs and meat per pound of feed than all other breeds. They are winners in all of the egg-laying contests. Among White Leghorns, Yesterlaid Range-Raised Laying Leghorns are the strain supreme, so recognized by twenty-two state institutions and experiment stations, which purchased Yesterlaid stock or eggs. Yesterlaid Leghorns are record-makers. All eggs or chicks have ancestral blood records like these: Laying at 4½ months; 260 eggs a year; 443 eggs in two years. Literature free, giving information on growing, feeding and handling Leghorns.

YESTERLAID EGG FARMS COMPANY Dept. 5 PACIFIC, MO.

MRS. J. H. HARNLY - 2301 ELISHA AVENUE - ZION CITY, ILLINOIS

A MEETING OF THE CAMPINE CLUB.

The American Campine Club held its fifth annual meeting at the Coliseum Show, Chicago, December 13th, 1915. It was well attended and the following officers elected for the ensuing year: President, M. R. Jacobus, Ridgefield, N. J.; first vice-president, N. E. Luce, Glendale, Cal.; second vice-president, Dr. J. H. Frudhomme, Thurmont, Md.; secretary and treasurer, Mrs. Chas. H. Owings, Dumont, N. J.

The executive board members are: C. A. Phipps, Wayland, Mass.; S. V. R. Martling, Ridgefield, N. J.; Mrs. A. A. Carver, Seville, O.; together with the president and secretary.

Much enthusiasm was shown thruout the meeting and many new plans made for the coming year. A club catalog will be issued early in the season which will surpass any former edition. The club now has about 650 members and is in a most prosperous condition.

THE FANCIER'S FOWL.

If you are not already a breeder of Golden Penciled Hamburgs, possibly you are an admirer and a prospective breeder.

In either case, I wish you would be kind enough to co-operate with me in the organization of the Golden Penciled Hamburg Club which will take place at Madison Square Garden, January 3rd, 1916, at 7:30 p.m.

It will cost you only \$1.00 initiation fee, which will include your first year's dues, and you must be a member of this club to compete for the fine list of specials which are being offered.

Send in your name and remittance promptly to me and oblige,
Little Silver, N. J. John A. Gamewell.

AMERICAN BUCKEYE CLUB MEMBERS.

I want to thank each and every member of the American Buckeye Club for the honor they have bestowed upon me. I make you this promise, that I will do all within my power to further the best interest and help elevate the standard of the breed. Let every member join hand in hand and make the American Buckeye Club one of the strongest in America. Fraternally, H. W. Deem, secretary and treasurer American Buckeye Club.

HARTFORD, WIS., ANNUAL SHOW.

The Hartford Poultry and Pet Stock Association, A. L. Kissel, secretary, will hold their annual show at Hartford, Wis., February 1-6. Geo. M. Wells will place the awards. Cups valued at \$35 to \$50, and \$100 in gold specials are some of the premiums offered. A. P. A. rules will govern. Entries close January 25th.

A Message for YOU

A Guide to Success With Poultry

And all of you need it—the fancier, the market poultryman, the expert and the amateur.

Paper Bound 50c Cloth 75c

It is with a great amount of pleasure that we announce to our readers and the poultry world in general, the purchase of that famous book

999 QUESTIONS and ANSWERS

It is the one book that covers the poultry industry like the sky covers the earth. No matter what question arises, this book gives you the answer.

It eliminates theories—and gives you “hard, cold facts”—positive conclusions arrived at by the actual experience of the most noted of poultry authorities and the world’s most successful breeders.

The form adopted for this book—namely, questions and answers, meets popular demand—it gives you the desired information in a few words and right to the point.

You will find 36 pages devoted to the fancier—7 pages to eggs—12 pages to proper feeding—5 pages to the correct rearing of chicks—6 pages as to what and just how to build—14 pages to that ever-important factor in your success or failure, diseases—12 pages on natural and artificial incubation and brooding—4 pages devoted to turkeys, ducks and geese—besides 33 pages devoted to miscellaneous questions and answers, the ever important little things that come up from time to time.

In fact, you will find it complete and the correct answer to one of the many problems that confront you during the year, will more than pay for the cost of this, the greatest of all poultry books.

Having purchased this book outright, we desire to give our many readers the benefit of same—therefore, if you send in \$1.25 we will send you a paper bound copy of this great book, “999 Questions and Answers,” and also enter your name to ONE year’s subscription to the “One Great Poultry Paper of America,” the American Poultry Journal—the paper that prints all of the poultry news, while it is news. If you are a subscriber at present—the new subscription will start at the expiration of present subscription. If you wish cloth bound, send \$1.40, Canadian subscribers add 25 cts. for postage. Foreign, 50 cts. If you just want the book, paper bound is 50 cents and cloth bound 75 cents.

American Poultry Journal Publishing Co.
542 S. Dearborn Street, Chicago, Illinois

ATTENTION SECRETARIES OF WISCONSIN, MINNESOTA AND ADJOINING STATES.

We just received a letter from Secy. Wm. H. Hoeschler to the effect that he is trying to get the various secretaries of Wisconsin and Minnesota together for mutual benefit of each association.

By so doing show dates could be arranged without conflicting, especially where exhibitors have been in the habit of making certain shows, but on account of frequent conflicting dates had to give up one or the other.

Also the names of exhibitors could be exchanged, thus offering a first-class mailing list of actual exhibitors without much loss of postage on dead names.

A great deal of benefit could be gained by co-operation and all this could be easily handled thru the mails without extra expense of railroad fare unless it should be agreed upon by the majority to have a meeting each year at some centralized city, but this could be decided later.

Any of the other adjoining states are invited to co-operate.

Secy. Wm. H. Hoeschler of La Crosse, Wis., would be glad to hear from the secretaries in order to have their opinion on this matter before dates are set for the 1916 shows.

AMERICAN BARRED PLYMOUTH ROCK CLUB MEET.

The national meeting of the American Plymouth Barred Rock Club will be held in connection with the Greater Chicago Show, January 13-19, 1916. This club has worked up a magnificent list of specials, which total a little over \$350 in cash, and if money counts this should bring out a magnificent exhibit. All Barred Rock breeders should send to the Chicago Poultry Breeders Association, at 921 Advertising Building, for a copy of the premium list, which will give you a full list of these premiums.

NATIONAL WESTERN AT DENVER.

The annual exhibition of the National Western Poultry Show will be held at Union Stock Yards, Denver, Colo., Jan. 17-22, 1916, in connection with the National Western Stock Show. Comparison show, with Tucker and Keeler placing the awards. One hundred thousand visitors from all sections of America attend this show, making it one of the attractive events in poultrydom. More than 90 per cent of all entry fees returned as premiums. Premium list by addressing W. C. Schuman, manager, 400 South Emerson street, Denver, Colo.

NOTICE TO SHOW SECRETARIES.

The Rouen Duck Club of America will offer ribbons on best display of Rouen ducks best old drake, old duck, young drake, young duck, to any show in the United States or Canada, subject to the following rule: Should the ribbon be won by non-member, same will be held until person winning ribbon becomes a member of The Rouen Duck Club of America, providing they do so within sixty days after the show. Please send list of Rouen duck winner to the secretary, Edgar M. Le Baron, Box 48, Mesa, Ariz.

MINORCA SENSATION AT MADISON SQUARE GARDEN.

The largest list of specials ever placed on S. C. Black Minorcas—three hundred and six dollars (\$306)—\$201 in cash, \$105 in cups, to be offered in connection with the annual meeting of the American Black Minorca Club. Pamphlet giving full information now ready. Send for one. Frank McGrann, Secretary, Lancaster, Pa.

CHAMPION LAYER AT MADISON SQUARE GARDEN.

Columbia Queen, champion heavyweight layer (record of 286 eggs), will be on exhibition at the Madison Square Garden Show December 31 to January 5, 1916; will doubtless attract much attention from the many interested in this particular branch of the poultry industry. This record layer is of the Columbian Plymouth Rock variety.

The Golden Wyandotte Breeders and Fanciers have organized a club and have taken the rules and name of the National Golden Wyandotte Club. Everyone interested in this breed should become a member before the new catalogue is issued.

This club is formed to bring together all breeders, and thereby bring this popular variety back in the front ranks of poultrydom.

Ribbons are offered at all shows where three or more members show and state organizations will be formed when ten members from a state enroll. Mail \$1 to the secretary and a membership card will be mailed you. J. S. Pennington, secretary, Plainfield, Ill.

The second annual poultry show of the Delaware County Poultry Association will be held in the Armory at Media, Pa., January 19th to 22d, 1916. Indications are that this show will exceed by a considerable number the entries of last year's most successful show and preparations have been made to take care of about 1,000 entries.

The premium list shows an unusually large and attractive line of specials, together with a considerable number of silver trophies of various kinds and many cash specials. The show last year made an unusual record in the matter of premiums and, in addition, every special was delivered and every winning paid in cash or the check was mailed to the exhibitor before the show closed on Saturday evening.

The show will be judged by H. D. Riley, A. M. Anderson, Prof. F. H. Stoneburn, Thomas G. Samuels and others.

It will pay you to write to Mr. P. G. Platt, secretary, Wallingford, Pa., who will be pleased to forward you a premium list and any other information you may desire.

THE OIL CITY POULTRY ASSOCIATION.

The Pennsylvania State Meet of the Ancona Club of America will be held in connection with the Oil City, Pa., Show, Jan. 12, 13, 14 and 15. There will be \$50 in gold and several handsome cups offered by the association and by individual members. Anconas are coming into favor fast and it is expected that Oil City will have one of the best and largest classes shown this winter. Premium lists ready Dec. 12. Send to Chas. R. Baker, Secretary, for one.

The Pennsylvania State Meet of the American Houdan Club will be held in connection with the Oil City, Pa., Show, Jan. 12, 13, 14 and 15. State cup will be awarded, also a handsome cup for the best color male and one for the best color female, together with cash and specials. Houdan breeders are strong in Pennsylvania and they will be well represented in Oil City and competition strong. Premium list ready Dec. 12. Chas. R. Baker, Secretary.

INTERNATIONAL SINGLE COMB BLACK MINORCA CLUB.

The next meeting of the International Single Comb Black Minorca Club, will be held in connection with the Kansas City Poultry Show, at Convention Hall, Kansas City, Mo., from Jan. 10 to 15, 1916. Mr. E. L. Noyes, 726 Main St., is the Secretary.

At the annual meeting of the National White Wyandotte Club, held in connection with the Greater Buffalo Show, the following named officers were elected for the coming year:

President, John S. Martin, Port Dover, Canada; vice-president, J. W. Andrews, Dighton, Mass.; secretary-treasurer, S. C. Babbie, New Cumberland, Pa. Executive committee, F. B. Williams, Naugatuck, Conn.; Carrington Jones, Buntyn, Tenn.; W. H. Biddle, Tacoma, Wash.; H. J. Riley, Bryan, O.; Roy A. Bisbee, Missoula, Mont.

Reports of the various officers and committees told of the prosperous condition of the club and the wonderful interest being shown in the White Wyandotte fowl.

At this meeting the club so amended its constitution and by-laws that hereafter officers will be elected by a mail vote of all members and not at the annual meeting as heretofore.

The Single Comb White Leghorn Club of Central New York is offering a set of special prize ribbons on S. C. White Leghorns at every show which publishes its notice in the premium list. Show secretaries are requested to write to the secretary of this club for its offer. You can help advance your favorite breed by joining the club. Dues only \$1 a year.

If you are not already breeding this variety but are thinking of taking them up get our catalog and be convinced that we have the best. Sent free. Address Edwin H. Chase, secretary-treasurer, R. D. No. 1, Edmeston, N. Y.

The twenty-first annual exhibition of the Rochester Poultry and Pigeon Association, J. W. Chapman, secretary, Rochester, N. Y., Show, will be held in buildings 3 and 4 at Exposition Park, January 27th to February 4th, inclusive. A number of associations will hold their state meet at this show. Judging from the number of entries coming in, the Flower City Show will make them all take notice this year. The following judges will place the awards: Charles H. Welles, Haldie Nicholson, Charles Nixon, William G. Minich, Charles T. Corman, Wetherell H. Card, Howard L. Young, L. W. Hilkner, James A. Smith, E. S. Wilson, V. A. Kamiensky.

There seems to be quite a revival of the score card system of judging this winter, especially at the smaller shows. The advocates of this system have been strongly urging its merits with the argument that it is more explanatory and instructive to the inexperienced exhibitor. We are watching the results of the more or less re-adoption of the score card.

The annual exhibition of the Fanciers' Association of Indiana will be held at Indianapolis, Ind., Jan. 10-14, 1916. W. C. Pierce, W. W. Zike, Frank Conway and Len Rawnsley, judges. This association is offering the largest number of specials ever offered at any poultry show in connection with the Black Langshan Club Meet. Ten specials will consist of cash, silver cups, medals and badges. The Langshan breeders have always made this one of the largest classes at this show and they expect to have more entries than ever before. The national meet of the Black Langshan Club will be held during the show, also the central meet of the Buff Orpington Club, which comprises the states of Michigan, Ohio, Indiana, Kentucky, Illinois and Wisconsin. This club alone offers four handsome silver cups and this offer is duplicated by the association. The premium lists are now ready for distribution. Write for one to the Secretary, C. R. Milhous, Indianapolis, Ind.

There are just two ways of doing business. One is right and one is wrong. If you know that your product is a needed one, honestly produced and worth what you ask for it; if you realize that those in your employ are a necessary business asset and deserve your earnest consideration; if your customers are your friends—you are on the right road. If on the other hand you are attempting to exchange a worthless article for cash, or do not "deliver the goods" as the saying goes; if you do not consider the welfare of your employees; if you make enemies of your customers, working on the basis that there is a "new sucker born every minute," you are burdening the business world with your presence, and are slated for the toboggan—in other words, you are on the wrong road.

There is one thing which the would-be successful man should learn early in life, which is that it is never the part of wisdom to bank too much on the future for the pleasures which success will bring him. He who does not get the best from present joys, as they are meted out to him, finds the future, no matter to what heights of business success he has climbed, a delusion and a snare. Each day should reap its joys—work well done, lessons learned, service given. The man who lives well his days as they come, early learns how to live, with a lifetime in which to make good use of the knowledge.

BIRDS BARRED PLYMOUTH ROCKS EGGS

Indianapolis, 1914 and 1915 State Champion Cockerel; 1st pen; 2nd pen; 1st cockerel; 1st pullet; 2nd and 3d hen. A limited number of birds for sale.

(Advertisement)

Lady Eglantine.

The \$100,000 hen is a production founded upon scientific breeding and a righteous following of a perfect strain. That such value is placed upon her is not inconsistent with the results obtained any more than to pay an artist, with a highly cultivated voice, \$100,000 for one year's work. Merit founded upon principles brings its just reward, and it is within keeping that the Hartley Steel Crated Box Company, of Saginaw, Mich., should be awarded, in competition with many others, the order of the Eglantine Farms Company for Hatching Egg Boxes to carry the product of Lady Eglantine and Coops with which to transport her relatives and descendants.

THE "COLLINS" IS THE BEST OATS SPROUTER

AND IT'S THE CHEAPEST \$3

You readers of the Am. Poultry Journal know as well as I do that it's essential to feed green food to

Make Your Hens HEAVY Winter Layers

You also know that in the form of sprouted oats you can furnish your hens what they need in the way of fresh, tasty, sweet and wholesome green food, and protein, at **Less Cost** than in any other form. The only point in which you are interested is in knowing which is the most practical, sensible, workable, convenient and satisfactory sprouter. It's the "COLLINS"—made in units, eight individual pans of galvanized steel, 11 x 15 inches, a pan for each day of the week, and a drip pan. These pans fit ingeniously one on top of the other, doing away with the usual frame or stand. The pans are properly perforated to furnish exact amount of drainage to insure sprouting of practically every fertile oat, and to eliminate souring and rotting, and give a more uniform, prolific growth.

For \$3.00 I deliver The Collins Sprouter anywhere east of the Mississippi River, Express or Parcel Post charges paid by me. West of the Mississippi, \$3.50.

Try it ten days, and if it isn't satisfactory ship it back, and I refund your money. Illustrated descriptive booklet free for writing.

We could use a few good agents. Write for territory.

THE UTILITY POULTRY HOUSE and YARD ON ROLLERS

Easily moved about by hand. Dimensions 10 feet by 10 feet.

Accommodates 18 fowls.

Economises space, as the floor partly covers the yard, the roosts are hung above the floor and the nests above the roosts. A small ventilating door at the top insures fresh air.

Floor easily cleaned in one minute with a hoe.

Separate doors and openings to yard, floor and nests.

Moved about a space of ground 15x30 will give the hens fresh green and clean ground all the time, as by the time the house is moved over the ground that it first occupied the grass and weeds will have had time to grow again.

In the winter the snow may be removed from a space and the yard moved over

Protected and manufactured solely by

to the clean ground, preventing snow eating.

Warm in winter, as the house conserves the animal heat to an extent as the ventilating door at the top is closed.

The high pitch of the roof prevents leaks.

Floor above ground shut off at night protects from rats, foxes, skunks, etc.

Provides fresh, clean yard continuously.

Improves trees near which it is allowed to stand.

Fertilizes the ground, keeps chickens out of the garden, as the yard is enclosed at top.

Nests, Roosts, Floor and Yard all combined.

Is in fact positively the best thing in a poultry home for a colony ever put out.

Price—Knocked down F. O. B. Express or Freight, \$8.50.

Protected and manufactured solely by

**These
Pure-Bred
Chicks Are
Sure To Be Big
Producers**

The Pittsfield Strain is nationally noted for vigor, health and heavy egg production. Year after year we select the best utility stock—the kind that will make most money for beginners or experts. We set 170,000 eggs at one time. We can hatch 1,000,000 chicks a year. That's why our prices are so very, very low. You're sure to succeed with

PITTSFIELD Day-Old Chicks

Barred Rocks	\$18 for 100	Single Comb	\$15 for 100
White Rocks	\$10 " 50	White	\$8.50 " 50
S. C. R. I. Reds	\$5 " 25	Leghorns	\$4.25 " 25
White Wyandottes, \$22 for 100; \$12 for 50; \$6.00 for 25.			

We Guarantee Safe Delivery to You

Get your advance order in now. NO MONEY DOWN. Just tell us how many chicks you want, of which breed, and when you want them shipped. Don't wait—for we fill orders in rotation. With your chicks we will send expert directions telling how to make them grow and pay.

Special Chicks for Breeders

We have a number of extra fine birds—all hen raised—from very high egg-producing parents. Better get your order in now.

Freight Prepaid

When you compare these bargain prices on Reliance Incubators and Brooders with others, remember that, besides the Big Saving in Price, you save all the freight.

As a special inducement to you WE PAY THE FREIGHT to your R. R. Station east of the Rocky Mountains. This is a Big Concession and means a material saving to you. Don't be fooled by so-called low prices quoted F. O. B. Factory. WE PREPAY the FREIGHT.

Reliance Incubators and Brooders

A CHICK FROM EVERY EGG

Fully Equipped No Extras to Buy

Hatching Guarantee

We guarantee Reliance Incubators to hatch every chick that can be hatched. Reliance Brooders to raise every chick that is worth raising—when operated according to our instructions sent with every Incubator and Brooder.

Money Back Guarantee

We positively Guarantee RELIANCE Incubators and Brooders to be exactly as represented. If any Reliance Incubator or Brooder fails to give PERFECT SATISFACTION, we will take back the machine and REFUND YOUR MONEY.

Best Construction

That's the keynote of our success—the reason we can guarantee the Reliance to make chicken-raising PAY. Made of the best materials money can buy—side walls, top and bottom double thick. Cold can't get in, heat can't get out.

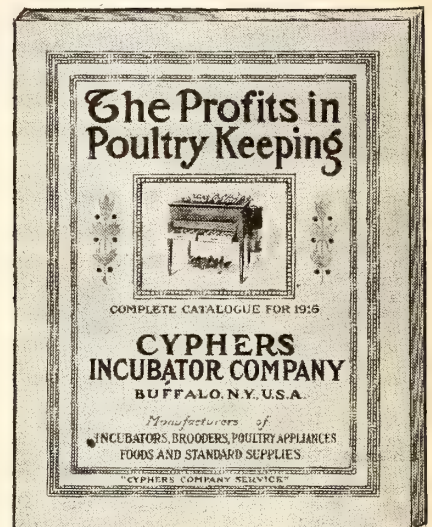

Complete Equipment

Remember—the Reliance Incubator is Hot water heated with heavy copper tank and boiler and is equipped with the best regulator, thermometer, egg-tester, lamp, egg trays, complete instructions. Satisfaction guaranteed.

These Bargains Limited—Order Today

These Bargain Offers are our New Year Gift to you. Accept them Quick. Order your Reliance outfit today—Now—at Once—from this advertisement. Don't hesitate—don't delay. Our Satisfaction Guarantee protects you absolutely. Don't wait until this New Year Offer is withdrawn. If you must have more information, write us quick. A postal will do. Literature and Details sent on application.

CLASSIFIED ADS.

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention AMERICAN POULTRY JOURNAL. All copy for Classified Ads must reach us by the 17th of month preceding date of issue. :: :: :: ::

FOR SILVER CAMPINES address as before, Brookside Poultry Farm, R. 1, Altoona, Pennsylvania. 11-1

SILVER CAMPINE COCKERELS. I have for immediate sale about 50 cockerels hatched from eggs laid by trap-nested females with very high egg laying records, and sired by some one of my males that won his blue ribbon at the Coliseum, Chicago. I will sell these cockerels at \$3.50 to \$5 each. There are no better Campine Cockerels for breeding purposes in the country. They have type, vigor and are line-bred to produce egg-layers. In fact, for producing an egg-laying strain, they are just as valuable as males that cost a dozen times as much. Orders will be filled as received. Consequently, if you are interested, an early reply is advisable. In writing please state that you wish a utility cockerel, and mention the American Poultry Journal. Frank E. Hering, South Bend, Indiana. 11-15-tf

GOLDEN CAMPINES. Thirty yearling hens at prices that will meet your pocket book. They come of some of the best stock in America. They won't last long at these prices, so write today. Aug. D. Arnold, Dillsburg, York Co., Pa. 1

ONE HUNDRED EXTRA GOOD D. W. Young Strain S. C. White Leghorn cockerels, \$3 and \$5 each. Circular. Chas. F. Schwab, Bradford, Pa. 1

POULTRY SERMON NO. II—When do you want your chicks? Nobody can hope to succeed with poultry without looking farther ahead than the next step. As in every other business, plans should be laid well in advance to insure their being safely carried out. Is it fair to the poultryman to write for chicks or eggs a week before you want them? Nine times out of ten you won't get them, and if you do, they will be "left-overs" from some other hatch. There is only one way to do business, and that's the right way: Order what you want early enough to let the poultryman know where he stands. You can't help but profit by the improved service you will get. We will have a free booklet ready about January 15th, fully descriptive of our wonderful strain of exhibition and utility White Leghorns. Hough Egg Farm, Box J, Far Hills, N. J. 1

SINGLE COMB WHITE Leghorns. Young's strain direct. Chalk white (no brass). 500 early cockerels \$1 and \$2 each. Hedgewood Farm, Tiffin, Ohio. 11-1

BIG PROFITS in Poultry

If You Know How. Get This FREE BOOK and Learn How

We have facts and figures on poultry culture that we want to put before every man and woman interested in raising chickens. Whether you are an old hand at the business or just beginning—whether you have been successful or not—whether you have an extensive poultry plant or are raising a few in a city back yard we have money making information for you. We want to show you how you can succeed and make a splendid income from poultry. We are the largest and best equipped exclusive poultry school in the world and we have in our course of 48 complete lessons made it possible for you to learn the poultry business in a scientific yet practical way.

2354 Eggs from a Pen of 10 Hens in a Year

In our lessons Director Quisenberry of the Mo. State Poultry Experiment Station gives you the methods he uses to secure such marvelous results. He tells you how he got 2354 eggs from a pen of 10 hens in one year—he tells you how to build practical and inexpensive poultry houses—how to feed for a big egg and meat production—how to treat poultry diseases—how to mate and breed—how to dress and market poultry. In other words you get all the knowledge necessary to make you a successful raiser of poultry. Nowhere else can you get such a course of instructions in poultry culture. No other school has behind it men of such prominence and experience in the poultry business. But send today for our Free Book "Dollars and Sense in the Poultry Business."

American School of Poultry Husbandry, Box 51, Mountain Grove, Mo.

Barred Plymouth Rocks

BUY your exhibition and breeding birds from us. No matter what you pay, no one can furnish you better quality than we can. We are specialists in Barred Rocks, have bred them in large numbers for twenty-five years and can give you selection no small breeder possibly can. Our quality is wonderful, yet our prices are the lowest of any of the big breeders.

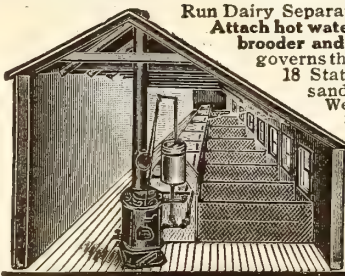

Winnings Ky. State Fair Sept. 1915

4 firsts; 2 seconds; 2 thirds; 1 fourth; 3 fifths, premiums

If you are interested in fine Barred Plymouth Rocks, write us, and we will send you the handsomest and most complete catalogue published of this breed. You will make a great mistake if you place order before getting our prices and catalogue No. 3.

POPE & POPE, Box A, LOUISVILLE, KENTUCKY

Ripley's No. 20A Combination Cooker and Heater

will cook 1 to 3 barrels feed at a time, or heat water in tanks 300 ft. from cooker.

Run Dairy Separators, Sterilize Bottles, Cans, etc. Attach hot water pipes to fire box and it will heat brooder and hog houses. Automatic regulator governs the heat. Used and recommended by 18 State Experiment Stations and thousands of Noted Breeders and Farmers.

We manufacture the Largest Line of Cookers in the U. S. Prices \$4.50 to \$70. Also White-washers, Sprayers, Fireless Boilers, Egg and Day Old Chick Shipping Boxes, Carts, Cast Iron Heaters and Metal Hovers for heating Brooders, Greenhouses, etc. Write for Catalogue, showing Letters from hundreds of pleased customers. A Ripley Cooker will save you 50c on every \$1.00 worth of feed you feed your stock and poultry.

Ironclad

TRADE MARK

Wins in the Two BIGGEST HATCHING Contests Ever Held

Why take chances with untried machines when for only \$10 we guarantee to deliver safely, all freight charges paid (East of the Rockies) BOTH of these big prize winning machines fully equipped, set up ready for use? Why not own an Ironclad—the Incubator that has for two years in succession won in the GREATEST HATCHING CONTESTS EVER HELD? In the last contests conducted by the Missouri Valley Farmer and Nebraska Farm Journal, 2,000 Machines were entered, including practically every make, style and price. With 140 Egg Ironclad—the same machine we offer with Brooder, freight paid, for only \$10, Mrs. C. F. Merrick, Lockney, Texas, hatched 148 chicks from 148 eggs in last contest.

We Give 30 Days Trial —Ten Years Guarantee

You have nothing to risk. We will send machines—let you use them 30 days—urge you to compare them in quality of material, hatching ability, workmanship and price—and if you don't find them satisfactory, send them back—we'll pay the freight charges and return your money. You are absolutely safe. We have to do as we advertise. If we didn't the publishers of this paper would not carry our advertising.

It tells how Ironclads are made and why they win in the Big Hatching Contests.

140 EGG INCUBATOR CHICK BROODER

When an incubator is constructed of material of this kind it gives you the strongest and most durable incubator that can be made—a machine that will not warp or shrink, or open up at the seams, as every joint is lapped over with our galvanized iron covering—giving you a machine that will last a life time. Don't class this big, all-metal-covered dependable hatcher with cheaply constructed machines. Ironclads are not covered with tin or other thin metal and painted, like some do to cover up poor quality of material. Ironclads are shipped in their natural color—you can see exactly what you are getting. Don't buy any incubator until you know what it is made of. Note these Ironclad Specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering. Galvanized iron legs, large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boilers, self regulator, Tyco's Thermometer, glass in door, complete book of directions, and many other special features fully explained in free catalog. Write for it today or order direct from this advertisement and save time.

We Bred and Raised Hold Their Place as

FIRST WINNERS

OUR RECORD:

At Madison Square Garden: 4 Firsts, 4 Seconds, 3 Third Prizes, besides other awards have been won by us at a single Madison Square Garden Show. Three times have Males of our breeding won 4 of the Five prizes offered in the class including firsts.

No other exhibitor has ever won THREE FIRST PRIZES at a Madison Square Garden Show when we competed. The highest cash price ever actually paid for a B. P. Rock so far as has come to our knowledge was given for a male we bred and raised.

Three times have Males of our breeding won four of the five prizes offered in the class including FIRSTS.

No other exhibitor has ever won THREE FIRST PRIZES at a Madison Square Garden Show where we competed.

Many birds have been sent by us to customers in England, Russia, Japan, South Africa and other Foreign Countries. They arrive safely and give good satisfaction.

29 of our "Lee Belle" Females have been First Winners at Madison Square Garden Shows alone, and 60 Winning Males at Madison Square Garden Shows have been bred by us.

50 Selected Breeding and Show Cock Birds and 1000 Fancy Specimens, Males and Females, For Sale. Ringy, blue-tinged, sharp barred birds from our best pens. We never had a finer lot of birds for every demand. Price list free. EGGS FOR HATCHING. But we do not sell baby chicks. Illustrated circular free.

HOW TO PLAY THE GAME

A good title for this picture is "Robinson Crusoe" because there are two men and one is saying, "What do now, Robinson?" and the other is saying, "No, you must call me Mr. Crusoe." So it is very plain that a suitable title is "Robinson Crusoe."

This simple picture introduces you to the Piktur-Qwz-Game. There are sixty pictures. The best answers (most appropriate titles) will receive the decision of an impartial committee of judges. The game is very easy. In the event of ties each tying contestant will get full reward tied for. Full information will come to you with the complete Piktur-Qwz-Game Outfit, and you can start at once to playing for your share of \$10,000 cash.

Copyright 1915, by Publishers' Picture-Quiz Association, Inc., New York City. All rights reserved.

A Regular Income of \$20.00 PER MONTH—FREE TO YOU

Throughout Your Life and to Your Heirs Forever
Positively Obtainable by You as a Reward in the

\$10,000 CASH

Piktur-Qwz-Game

Piktur-Qwz-Game consists of a few easy pictures for which you are to supply titles of books. However, you do not need to know one single book title, as all the titles you can use are to be found in the Official Catalog. You simply get the pictures, the Catalog and Reply Book. Then go over the pictures carefully and think up what titles best fit them. Then look through the catalog for the titles and enter the titles you have picked out in the Reply Book. Game is interesting and easy and open to all.

\$10,000 in cash will positively be awarded. Absolute fairness is guaranteed to all. Piktur-Qwz-Game is being conducted by Woman's World Magazine of Chicago, Ill., but American Poultry Journal, through special arrangement, is enabled to offer the game to their readers also. The full rules, free on application, tell how you can compete without one cent of expense, but you should accept our liberal subscription offer below, then you can start at once to pick out the titles to the pictures. This contest closes February 29th, 1916, so you should start immediately in the game. You'll find pleasure and profit in it for you. \$2,500 in cash is first prize. This amount put out at a good rate of interest would bring you \$20 per month for the rest of your life and then go to your heirs forever. It's worth trying for. You should get it. You have just as good an opportunity to win as anyone. Now get into this game today.

FILL OUT AND SEND IN THIS COUPON TODAY SURE.

American Poultry Journal, Chicago, Ills.:

I hereby enter the \$10,000 cash Piktur-Qwz-Game. I enclose one dollar, for which send me American Poultry Journal for one year, Woman's World for one year, and as a premium you are to send me free complete Piktur-Qwz-Game Outfit, consisting of Picture Pamphlet (containing the 60 pictures), Catalog of Book Titles and Reply Book to write my answers in.

E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

Win at the Imperial Show
of all the world

Madison Sq. Garden
New York, February, 1915

The Most Wonderful Record in the History of Barred Plymouth Rocks

WINNING AS FOLLOWS:

EVERY 1ST PRIZE OFFERED

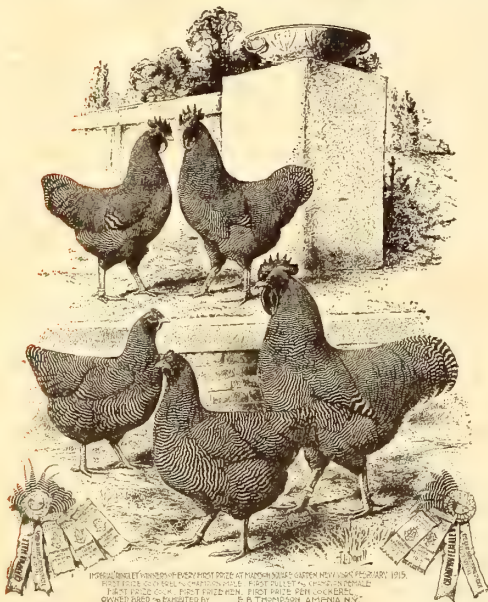

All Ribbons on Cockerels, Namely:
1st, 2nd, 3rd, 4th and 5th Prizes.

Cocks, 1st, 2nd, 3rd and 5th.

Hens, 1st, 3rd, 4th and 5th.

Pullets, 1st, 4th and 5th.

Exhibition Pens, 1st, 2nd, 3rd and 4th.

Winners of every first prize offered at Madison Square Garden, New York, February, 1915—first cock, first cockerel, first pullet, first hen and first pen cockerel.

Sweepstakes Champion Male and Female, Shape and Color Specials—Male and Female. All Silver Cups and Cash Specials. More First, Regular and Special Prizes than any exhibitor of any breed. This is the Capstone to their unequalled record at New York for 27 years.

Grand Winning Show Birds

The finest that all America has ever produced—are now on my farm ready to win Blue Ribbons and Silver Cups for you in any competition in the World in Cocks, Cockerels, Hens, Pullets and

pens. They are elegant in size and shape, fine heads, rich clear blue color, with that sharp, clean cut, narrow "Ringlet" Barring to the skin that wins under all Judges. The prices are reasonable.

Prizes and Silver Cups have been won by my customers on Imperial "Ringlets" in more than a thousand show rooms throughout the civilized World—You can win the same laurels. I will sell you grand exhibition birds for any show and breeders of this richest First Prize New York blood in elegant single birds, trios and pens mated to produce prize winners.

If You Want the Best in Barred Rocks You Must Have My Imperial "Ringlets."
My Customers Are My First Thought and Nothing Is Too Good for Them.

Elegant 70-Page Catalog Upon Request.

EGGS from the finest exhibition matings in the World
\$10 per setting; 4 settings \$35; 100 eggs \$60.

How to Make More Money from Poultry—with Anconas

Told in the new "Sheppard" Book—first copies of which have just been delivered by printer. *Send the coupon or write for a copy now.*

Are you breeding Anconas? Then you need this book. It tells how to make the most money from them—how to feed and care for them—the experiences of hundreds of Ancona enthusiasts. *Your copy is free.*

Are you breeding some other starin? Then you, too, should have my book. It will help you even if you don't buy Anconas. And it will show you how to make more money by changing to Anconas. Yes, it's chuck full of facts—and pictures—that's all.

Are you *planing* to raise a few, or many chickens? Then this free book will be worth its weight in dimes to you. Remember, I tell you what *others*, like yourself, are making from Anconas—in egg money, selling stock, exhibiting, etc. By all means get this book.

Do you want fresh eggs for home or market? Do you want to increase your profit from eggs? Do you want to start a Poultry Farm? Are you a student of poultry matters? Do you want winning stock? Or Eggs for hatching?

This book does not tell *everything*—well I should say not!—but it's bulging with so many worth-while facts, wrested from the experience of many people, that it will be mighty profitable reading—and it is free.

The new book contains eighty-six inside pages, forty-four fine half-tone cuts, a two page color plate, pictures taken on my farm; it tells how to raise baby chicks; what to feed stock, etc. I wanted it to be a real addition to poultry literature. Send for a copy—then write and tell me what you think of it. See my adv. pages 260, 261, and 350.

"Next!"

Well, I didn't mean to take you by surprise—popping out of a window that way—but here I am! No, this isn't all we get in one day. No, I don't often gather the eggs—but my photographer insisted that I "pose" for this. By the way, this is one of the 44 pictures in my new book. EGGS? Yes, you can get them at a lower cost from ANCONAS than from any other bird known to me. Glad to prove it. Send the coupon or write. "You are next."

Hip! Hip!! Hooray!!!**

Aristocrats Win

World's Champion, San Francisco November 18
First Prize, Chicago December 11
First Prize, Philadelphia December 18

} 1915

Under three of the foremost Barred Rock Judges in the World,

SCHWAB, JOHNSTON, RUSSELL

Listen! Aristocrats are Winning

Not only in one show—not only in ten shows—but literally in scores of shows—marching from victory to victory across the entire American continent, from ocean to ocean—making the greatest winnings ever placed to the credit of even this victorious strain of Barred Plymouth Rocks. And now comes

The Grand Sale of Breeding Cockerels

These are birds which are producing such winners. These are birds which will enable you to breed winners yourself. These are birds with which you can win out in the show room next winter. Get busy NOW—RIGHT NOW—plan ahead for next year. Would you, I mean you who are reading this, like to win out with a string of show birds next season? Then get some of these wonderful, powerful breeding birds, and breed winners yourself.

DO IT NOW!

For the Grand Breeders' Sale is going on now. Figure out ahead just what you will need, write me fully and leave it to me. I will furnish you with birds that will breed winners for you in your own yards. Remember: **ANY BIRD I SEND YOU MUST BE ENTIRELY SATISFACTORY TO YOURSELF OR I WILL REFUND YOU ALL YOU PAID ME.**

In that glorious Beauty of Plumage,

In that Deep, Narrow, Regular Barring down to the Skin,

In that Great Power of Reproducing these wonderful qualities—

these Aristocrat Cockerels stand almost alone. Oh! You ought to see them!

Write today—and make your selection before the best birds are picked out.

My BEAUTIFUL NEW CATALOG is ready and is free. It is undoubtedly one of the best books published on Barred Rocks.

W. D. HOLTERMAN, Fancier, Box A, FORT WAYNE, IND.

P. S.—Eggs for Hatching. I have only a few of my very best birds mated up for my own private use and can, therefore, spare but very few eggs from them. The price of these eggs is \$10.00 per 15; \$17.50 for 30; \$25.00 for 50, and \$50.00 for 100, and I guarantee eight strongly fertile eggs to each 15.

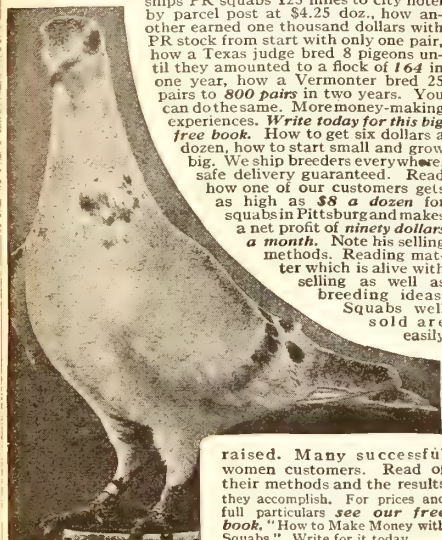

Columbian Plymouth Rocks

Eggs and stock from winners at Madison Sq. Garden and Palace, and sons of "Columbia Queen," champion heavy weight hen, record 286 eggs. Mating list free.

T. J. ENSLIN, Hackettstown, N. J.

SQUAB BOOK FREE

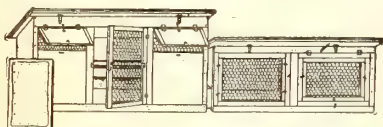

for 1916, telling how a Mich. hired man now works for himself breeding PR squabs and selling for \$5 doz., how an Ind. man sold 4652 PR squabs for \$1265 in 1915 and cured himself of desire to leave the farm, how a S. C. man ships PR squabs 125 miles to city hotel by parcel post at \$4.25 doz., how another earned one thousand dollars with PR stock from start with only one pair, how a Texas judge bred 8 pigeons until they amounted to a flock of 164 in one year, how a Vermonter bred 25 pairs to 800 pairs in two years. You can do the same. More money-making experiences. **Write today for this big free book.** How to get six dollars a dozen, how to start small and grow big. We ship breeders everywhere, safe delivery guaranteed. Read how one of our customers gets as high as \$8 a dozen for squabs in Pittsburg and makes a net profit of **ninety dollars a month.** Note his selling methods. Reading matter which is alive with selling as well as breeding ideas. Squabs well sold are easily

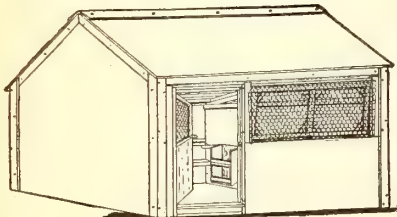

raised. Many successful women customers. Read of their methods and the results they accomplish. For prices and full particulars **see our free book, "How to Make Money with Squabs."** Write for it today.

6 Depot Street Randolph, Mass.

"Now Is the Time"

to exercise that most uncommon virtue of common sense, by buying your eggs for early chicks from us, in S. C. Buff and Blue Orpingtons, S. C. R. I. Reds and Houdans, White Runner ducks. And also getting into the pheasant game, which is the coming money maker. We have

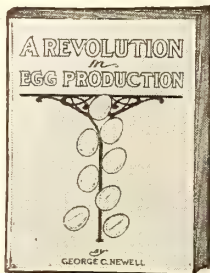

more varieties of fancy ducks and pheasants than any breeder in the United States. Send 30 cents in stamps for New Colortype Catalog; if you don't like it, send it back in 48 hours after receiving and we will return stamps.

CHILES & CO. : Mt. Sterling, Ky.

Are You Breeding for Egg Production?

If you are you need a copy of

A Revolution in Egg Production

The first edition of this new work on egg production is now on the press. It is from the pen of Geo. G. Newell, being the author's experience of tested, successful methods for continuous laying, as practiced in his farm plant.

The author proves that environment is as big a factor in egg production as heredity, and there is no question but that if one follows his teachings they are sure to find the egg yield increase.

It treats on poultry care in general, appliances, brooding problems, artificial and natural incubation, winter, summer, fall and spring eggs, care of eggs, meat production, what to feed, water problems, in fact, it covers the poultry yard thoroughly in all its branches. All in all it is a book that we heartily recommend, for we are sure you will find it the best investment you ever made.

Order your copy today, it will be mailed to you as soon as off the press. The price is \$1.00.

AMERICAN POULTRY JOURNAL PUBLISHING COMPANY,
542 S. Dearborn St., Chicago, Ill.

Felch Offers

The product of his breeding pens of 1915 in Brahmas, White Orpingtons, White and Barred Rocks and White Wyandottes that seem better than any previous years output. Send for circulars and particulars. Mention A. P. J.

EGGS

A Golden Opportunity

EGGS

comes once in every man's life, and you must take advantage of this opportunity to follow the road to Success, and now is your golden opportunity

To Secure EGGS for Hatching

from the most wonderful strain of fowls today, a strain which has proven to the entire world their superior quality over all others and have demonstrated to one and all that they are

The World's Best White Wyandottes

They have not demonstrated this fact in just one or two shows year after year, but in the largest and leading shows thruout the land, having just conquered the world at the Great World's Fair just passed, where our strain won over 25% of all the prizes offered in their class, as well as championship. All our 1915 winners are in our matings this season and now is your opportunity to secure eggs from these wonderful fowls

At Exceptionally Low Prices

and these prices range from \$3.00 to \$30.00 per sitting, according to the quality of the mating. Baby chicks at \$25.00 to \$60.00 per hundred, according to quality. Send for our mating list and baby chick circular, wherein we not only guarantee the fertility of the eggs but the quality of the chicks hatched as well, a guarantee which no other breeder places on his eggs. Our catalog and winning list are free. Also a grand flock of matured birds to dispose of.

The Martling Silver Campines

At Both Sides of the Continent at Once

Greatest Winners

At Two of the Greatest Shows of the World

The most phenomenal record in the history of Silver Campines. It has never before been approached by any breeder of any variety.

Madison Square Garden, N. Y. December 31, 1915 to January 5, 1916

WINNING:

FIRST and BEST DISPLAY. 2nd, 3rd, 5th Cocks.
 1st, 2nd, 3rd, 5th Cockerels. 2nd Pullet.
 1st, 2nd, 4th Exhibition Pen. More male birds than all other competitors combined.

Los Angeles Poultry Show, Cal. January 5, 1916 to January 11, 1916

WINNING:

EVERY FIRST PRIZE and FIRST DISPLAY. 1st Cock, 1st, 3rd, 5th Hens.
 1st, 2nd, 3rd, 4th Cockerels. 1st, 2nd, 3rd Pullets.
 All Specials and Cups offered

To Own MARTLING CAMPINES Means You Are a Winner

They will win for you as easily as they have for us; they simply cannot help it; they are too well bred to do otherwise.

Several years of concentrated effort and an enormous amount of money has been spent in developing, not only the best show bird, but also the very best utility bird possible. Every bird is bred under the personal supervision of Mr. Martling.

The most economical breed of fowl known—costs one-third less than any other to raise and keep; they mature very rapidly.

"Living Egg Machines," thus they are justly famed. For the past five years, wherever exhibited, they have won first prize for the largest and whitest eggs.

We have the largest stock of prize Campines in the world. When you buy from Martling, you get prize stock, guaranteed to win in any competition.

Prices reasonable. We believe a pleased customer is the best advertisement. **LET US PLEASE YOU.**

Circular upon request

Harnly's Quality White Orpingtons — World's Champions

Won championship White Orpington male two years in succession, on different males (these cocks now head two of my best pens). Championship White Orpington male Chicago Coliseum Show, December, 1914, (defeating the 1914 and 1915 Madison Square Garden first prize winners). Grand championship White Orpington male at Panama-Pacific International Exposition (competing with the whole world).

At the WORLD'S FAIR won the HIGHEST WH. ORPINGTON HONORS

Grand championship White Orpington male, American Poultry Association medal, California White Orpington Club special, first prize pen (five birds taking first prize, no other White Orpington breeder had more than one bird win first place), second hen (55 competing), second and 7th pullet, third cock (one only competing), won in each class I competed.

From September 1st, 1914, to September, 1915, won 127 premiums at big shows, 44 first prizes. Some magnificent stock for sale. Start right this season by getting bred-to-lay stock that will produce winners.

EGGS—Book your orders now so that you will not be disappointed. Fertility guaranteed. Free catalog.

REWARD Offered

At San Francisco my four registration books containing the addresses of hundreds interested in my exhibit, and to whom I promised to send catalogs, were stolen. Any assistance rendered in regaining this property will be rewarded.

Mrs. J. H. Harnly

Zion City, Ill.

All three for 25 cents

To introduce our goods we will send these three labor-saving sanitary "Star" pans to any address in the United States for 25c, postpaid. They are made of heavy, rust-proof material and will fit any Mason jar. **ORDER TODAY.** Send for catalog describing our Feather Brooders, Automatic Feeders and other poultry appliances.

SIMPLEX SUPPLY HOUSE

Pontiac Bldg.

CHICAGO, ILL.

The Incubator That's Really a Bargain Sent on a FULL MONTH'S FREE TRIAL

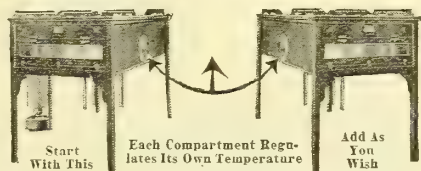

MOST incubators are made simply to sell; others give satisfaction for a short period, while a very limited few are built so well as to last a lifetime and always bring off the best possible hatches. The SCHWALGE is one of these. That's why, when you divide the cost by the years of service and then take into consideration the wonderful hatches the SCHWALGE gives, it is truly a REAL BARGAIN.

No incubator as well built as the SCHWALGE can possibly sell for less than the SCHWALGE price. None selling for less can possibly be as good. Altho the SCHWALGE costs *no more* than other good incubators, it gives you *many* advantages not found in other machines. These are fully explained in our big 1916 Catalog which we want to send you ABSOLUTELY FREE.

Schwalge^{Sect-}ional^{ional} Incubator

The Sectional Idea

The SCHWALGE is the only incubator that grows with your needs without increasing your work proportionally. When you run five ordinary incubators you have five lamps to attend. A SCHWALGE of any

size up to ten sections requires attention to but one lamp. The illustration explains the idea. You can start with a SCHWALGE of 150, 300, 410, 500 or 600-eggs capacity. As your hatching requirements grow bigger you add to your original section until you have a mammoth incubator of 1500, 3000,

4100, 5000 or 6000-eggs capacity. *It's like buying a mammoth incubator on the installment plan and making it pay for itself.* As many or as few sections as you wish can be operated at one time, all with one lamp.

You cannot do this with ANY other incubator. It's an *exclusive SCHWALGE feature*, and there are dozens of others equally important, all explained in our big FREE 1916 Catalog.

In the SCHWALGE you get the most perfect Moisture System ever invented. The SCHWALGE Ventilating System is wonderful; it supplies warm fresh air, full of oxygen, to the eggs. The SCHWALGE Heating System heats every inch of each section so that there are no "cold spots" and the Temperature Regulator prevents cooking the eggs. Everything that the perfect incubator should have you'll find on the SCHWALGE.

You Run No Risk

INSTEAD of taking chances with a cheaply constructed low price incubator try the SCHWALGE at our risk. You must be satisfied; you are the judge. If, after a FULL MONTH'S TRIAL, you are not fully satisfied the incubator belongs to us and it costs you nothing. No offer can be fairer; none can show greater confidence in our machine. You run absolutely no risks. Send coupon.

Send This Coupon for Catalog

You cannot afford to buy an incubator, no matter what size or price, until you have learned what the SCHWALGE offers you. It's different from any other incubator on the market. It offers you *more for your money* than any other machine. The whole story is in our 1916 Catalog. It's interesting reading; it's instructive. You'll enjoy it. So send the coupon for FULL INFORMATION about the SCHWALGE SECTIONAL INCUBATOR and our Full Month's Free Trial Offer. Just fill out the coupon, put it in an envelope and mail it N-O-W.

The Schwalge-Smith Co.
Box 751 - - - Elmhurst, Illinois

The Schwalge-Smith Co., Box 751, Elmhurst, Illinois

Gentlemen:—Without cost on my part or any obligation whatsoever, send me full particulars of your FULL MONTH'S TRIAL OFFER and catalog of your incubators.

I am interested in a machine of eggs capacity but in giving you this information, I want it understood that I do not obligate myself to buy or in any other way.

Hatched Out 90 Chicks in a Tent —Weather 20° Below Zero

SUCH was the record Old Trusty made for E. M. Whitcomb of Steamboat Springs, Colorado. He writes, "I had splendid success with Old Trusty last year, even if I did run the first hatch without a thermometer. Got 90 chicks in a tent, 19 below one night and 20 below the next. Have been told my hatches were better than any ever had in this part of the country."

What could better prove the weather-proof construction and sure results of

Old Trusty

Here was an extreme test. Not only cold weather but out in a cold tent. We do not recommend this way of hatching in cold weather, but it shows what Old Trusty can do when the extreme is wanted. Your hatches may be in a cellar, or in a room upstairs, or in a sheltered poultry house, but wherever they are you can be sure of top-notch results with Old Trusty. You want an incubator that can do cold-weather hatching. Winter hatches mean having laying hens the following fall and winter when egg prices soar. Mr. Whitcomb has the right idea. He proves it in his letter which further states that his 102 hens laid 1084 eggs in January with 40 below zero weather some of the time.

M. M. Johnson
Inventor of Old Trusty

Write Today for the Old Trusty Book

and Know the Money-Making Reasons Why
650,000 Customers Bought Old Trusty for Surest
Profits With Least Worry, Trouble and Expense

If championships were our point, Old Trusty would get the best a-going. Fact is, Old Trusty owners have taken more prizes than the owners of any other. But that may be because more people depend upon Old Trusty. This simply goes to show that if you want surest success with the most profits you want Old Trusty.

Big Production—Low Cost

You'd pay a top-notch price for Old Trusty if it was built by ordinary methods or in the ordinary factory. It's because we make Old Trusty in lots of tens of thousands in the largest exclusive incubator and brooder factory in the world that enables us to quote you the low price we do. Our organization is home grown and home trained—no big guns drawing fat salaries that add to the overhead cost. These are the reasons why you get the topmost in incubator value at the lowest cost in Old Trusty.

Now is the time to start your hatches. And you want Old Trusty to make them for you. Write us today for our 1916 price, freight prepaid to your station. Yours very truly,

H. H. JOHNSON

**The M. M. Johnson

F. E. HARRISON'S Royal Red S. C. R. I. Reds

LEAD ALL OTHERS

and prove beyond question that they are the World's greatest strain by winning for the fourth consecutive time special best display and all cups offered at the World's greatest Red show, Chicago Coliseum, Dec., 1915. In this Colossus show where each season the Giants of the Red World meet and battle for supremacy, my ROYAL REDS won more Firsts, Seconds and Thirds, and eight times as many specials as my nearest competitor.

My First prize Cock bird is without doubt the **Very Best S. C. R. I. Red Cock Bird Ever Exhibited**—not only in the opinion of the writer, but all the foremost breeders and judges of Rhode Island Reds in the world today, who have handled him.

Read what the following experts have to say about KING ROYAL, First Chicago Cock, and judge for yourself as to his merit.

I never handled a better S. C. Rhode Island Red cock. — Judge James Tucker.

He is the best Red male I ever handled, either comb. — Judge Fred Kummer.

Best Red cock bird I ever handled and I have judged a good many Reds. — Judge H. F. Rikhoff.

I do not know how you could improve on 1st Chicago S. C. Red cock shown by F. E. Harrison. Take the bird all in all, color and type considered, I have never seen a better one. — Judge W. C. Pierce.

If each and every cock bird shown at Chicago, December, 1915, in the S. C. R. I. Red class was dissected and the best section of each one was put together, the bird so made would not equal your 1st prize Coliseum cock bird. He is the best Red cock I ever saw. — Judge O. L. McCord.

The best Rhode Island Red I have ever seen. — Breeder Eugene Smith.

The best Rhode Island Red bird I ever saw, of either sex or comb. — Judge Len Rawnsley.

F. E. Harrison's 1st prize S. C. R. I. Red cock bird at the Chicago Coliseum, December, 1915, is probably the best Rhode Island Red cock bird ever shown. He is trim as a cockerel and has even surface and deep under color. He is the best I ever handled. — Judge Geo. W. Hackett.

I have never in all my experience as a breeder handled as good a Rhode Island Red male in either comb. — Famous Rose Comb Red Breeder, D. K. Williamson.

All of the great qualities combined in your 1st prize S. C. R. I. Red cock at Chicago; great color and beautiful type go to make a specimen seldom, if ever, seen. — Rhode Island Red Expert, Geo. Ainsworth.

F. E. Harrison shows a cock bird this year, even greater than his famous champion of last season. He being richer in color and more sound in every section, with type and finish that cause me to say he is best I have ever seen. — Judge F. W. Hallett.

The best male I ever handled. — Judge Clarence Hewes.

First S. C. R. I. Red cock bird at Coliseum; typical well finished; even, brilliant red; sound color and fine eyes and head. A most rare bird combining highest quality in every section. The kind we have long hoped to see. — Judge H. P. Schwab.

I consider F. E. Harrison's 1st Coliseum Chicago cock bird the best all around Red I have ever handled. — Judge J. C. Johnson.

1st Chicago Coliseum cock bird shown by F. E. Harrison is the best Red cock bird shown to date. — Famous Red Breeder, C. P. Scott.

1st S. C. R. I. Red cock bird shown by F. E. Harrison Chicago

Coliseum, 1915, is neat and well turned as a cockerel. Superb type and beautiful color. The best Red male I ever handled. — Judge Roundtree.

Your 1st Chicago Coliseum cock bird, 1915, even greater than your famous three times champion, the Giant Killer. He is the best S. C. Red cock I ever handled. — Judge Halbach.

The 1st prize S. C. R. I. Red cock bird shown by F. E. Harrison, Chicago Coliseum, December, 1915, is the best Rhode Island Red male (either comb) I ever handled. — Judge Geo. M. Wells.

Best all around Red I ever saw. — Judge G. E. Greenwood.

Best Rhode Island Red cock I ever saw. — Judge G. E. Greenwood.

Best Rhode Island Red cock I ever saw. — Judge Ralph Whitney.

From comb to tail and back to toes the 1st prize S. C. R. I. Red cock bird at the Chicago Coliseum is the best I ever handled. He is absolutely sound and clean thru-out and almost perfect wing. — Judge D. E. Hale.

I never handled a better colored Red and type as good as this bird. — Judge Carl Carter.

Best S. C. R. I. Red cock I ever handled in Chicago. — Artist and Judge, Louis Stahmer.

1st Chicago cock, 1915, is the best Rhode Island Red male the world has ever seen. — Judge Ralph Sturdevant.

I have many more and as strong endorsements of KING ROYAL as the above. **Get my King Royal Circular.** My winning twenty-one 1st prizes and best display for five consecutive times in four showings at the Coliseum and one showing at the January 1915, Greater Chicago Show, while my nearest competitor won but one 1st is conclusive evidence ROYAL REDS LEAD THE WORLD.

Best offer on eggs ever made. Circular FREE for the asking.

F. E. HARRISON - Box 492 - MENOMINEE, MICH.

K I S M E T !

Two Sweepstakes Championships

At the December

COLISEUM SHOW, CHICAGO, ILL.

I TOLD YOU SO

But you may have taken my statement with a grain of a salt. Now, however, that I have won the lion's share of honors in the great contest between the quality breeders of the East, West, North and South in Single Comb.

WHITE LEGHORNS

no fair-minded man will question the right of my stock to be considered the equal of the best, both in exhibition and egg-laying qualities.

JUST CONSIDER THAT IN S. C. WHITE LEGHORNS

I won First and Third in Cocks I won First Young Pen
I won First and Fourth in Cockerels I won Second and Third Old Pen
I won the Coliseum Silver Cup for 5 Best Cockerels
I won the Coliseum Silver Cup for Best Display.

In Silver

CAMPINES

The Very Cream of the Best Fowls of the Country Were Exhibited.

THE CAMPINE CLUB OF AMERICA

held its annual meet at the Coliseum, and the leading breeders of the East—the head-liners in Campinedom—were present with their exhibits. The classes were the very strongest, everyone agrees, that have ever been exhibited and

THE GREATEST HONORS WERE MINE

I won TWO of the five awards in Cockerels I won THREE of the five awards in Young Pens
I won THREE of the five awards in Hens I won The Silver Campine Club Challenge Cup
I won THREE of the five awards in Pullets I won The Coliseum Cup for Best Display
I won THREE of the five awards in Old Pens I had 48 Campines entered; 38 were placed

Exhibition Stock I can furnish Leghorns and Campines for any show in the Country at very reasonable prices, and my guarantee to satisfy backs up every sale.

Utility Stock I have several hundred each of Silver Campine and S. C. White Leghorn breeding stock, males and females, at astonishingly low prices. Why not get the best, when they will cost you no more than inferior specimens? And, remember, I guarantee each sale.

Hatching Eggs November 1st I had 10 pens of each breed mated. December 1st I had 250 vigorous baby chicks. By January 1st I shall have 30 pens of each breed mated. I am now selling eggs from my all-star matings at very, very reasonable prices and I guarantee safe delivery and high fertility. Write today for my January, 1916 Announcement concerning show stock, utility stock and hatching eggs.

Write today for Stock and Egg Announcement.

FRANK E. HERING, Desk B, So. Bend, Ind.

Five Hens Fed on Red Comb

Show Year's Record of 1072 Eggs

Let Charles E. Reed tell his own story. This is his letter:

"Edwards & Loomis Co., Chicago, Ill.

"Gentlemen:—My five White Plymouth Rock hens in the International Egg laying Competition was the heaviest laying pen of White Plymouth Rocks ever recorded in a laying competition. Their total yearly record was 1072 eggs and they were ahead of all varieties of Plymouth Rocks. One hen laid 247, another 244 another 228 and one 192. For the coldest four weeks of the winter they won the special prize for greatest number of eggs laid. These hens and their parents were raised and conditioned on Red Comb Feed."—C. E. Reed.

Red Comb

"Red Comb Means Health"

s a scientifically balanced ration—with the minimum of grit. Percentage guaranteed on each bag. Or without grit if preferred. Ground of the choicest of whole grains. No matter the distance, the cost or the trouble, we see to it that every ingredient is the best earth can produce.

Just Out-FREE

The new 1916 Prairie State Incubator Catalog is now ready. We want to send you a copy, FREE and postpaid. Just write your name on a postal and we will mail you one at once. Describes the famous

PRAIRIE STATE Incubators and Brooders

These splendid machines are used and endorsed by Poultry Experts the world over. For example: Prof. Jas. E. Rice, Dept. Poultry Husbandry, Cornell University, Ithaca, N. Y. writes:

"The fact that we recently purchased a number of Prairie State Incubators is perhaps the best evidence of the high opinion which we hold of your machines."

Mr. M. Kleppinger, Centre Valley, Pa., writes of Prairie State chicks: "From 1,000 chicks the loss was only 7 per cent. They have the right move and looks. When I opened the boxes they jumped out like crickets."

If you want to get the best results and

"Hatch the Most Chicks that Live"

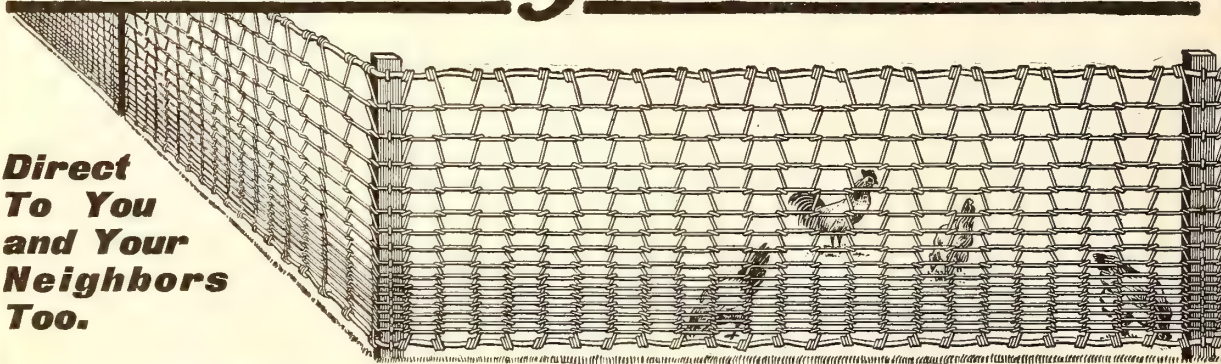

start with a Prairie State outfit. Free catalog tells all about the exclusive features of these machines. Describes the Prairie State moistened Sand Tray which keeps the eggs in moist natural heat. Explains the Eddy Current System of Ventilation which carries off deadly gases, and supplies the necessary oxygen for raising strong, healthy, early maturing chicks. Don't buy any incubator until you get the 1916 Prairie State catalog. IT'S FREE - POSTPAID. SEND FOR IT TODAY.

PRAIRIE STATE INCUBATOR CO. 201 Main Street **Homer City, Pa.**

(42)
**THREE OR FOUR
100% HATCHES**
Dear Sir:—Please send me one of your poultry books. I have used a 150-egg Prairie State for several seasons very successfully. Three or four times 150 chicks from 150 eggs. As soon as I am able to handle more chicks, I expect to purchase another incubator.

THE RELIABLE
INCUBATOR**

Get My Sensational 1916 Incubator Offer!

J. W. MYERS, Pres.
Reliable Incubator
& Brooder Co.

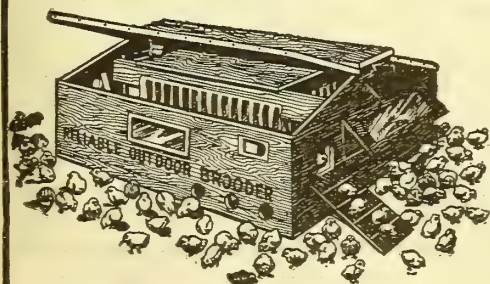

If you are in the poultry business with a cheaply built, unsatisfactory incubator, or if you are about to go into this profitable business with a small amount of money, I have a proposition that will look good to you.

The prices of really high class incubators have been rather high, and many people have bought cheaply built machines which proved to be unsatisfactory, with the result that they lost faith in all incubators.

Now, in this, the 34th year of my remarkable success with the **Old Reliable Incubator**, I am going to place one or more of my Old Reliabilities in every county in the United States, and at a low price.

I Want You to Let Me Give You My Startlingly Low Price on This World-Famous Machine

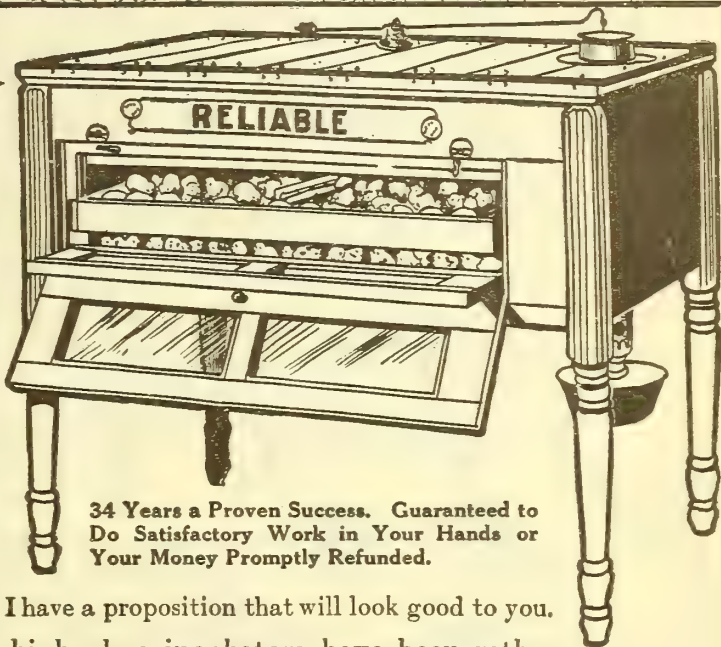

My Reliable Brooder will save you money on young chicks. They take care of the little chicks better than the hen, and are ready for work all the year round. They are built in all sizes, on scientific principles, for either outdoor or indoor use, hot-air or hot-water heated. You can't get along without a good brooder if you want the best results in the poultry business.

The BabyGrand Incubator

is the sensation of the day in the incubator world. A 50-egg, all-steel machine, with double walls, scientific regulation; guaranteed successful in your hands or money refunded. Will hatch every hatchable egg in any climate or weather. Sent complete, ready to work, charges paid, and with full directions for operating. **Price only \$5**, cash, check or postal order. This incubator enables you to get into the poultry business at little cost and be sure of the best results. We refer you to any bank as to our responsibility.

50 Eggs \$5

34 Years a Proven Success. Guaranteed to Do Satisfactory Work in Your Hands or Your Money Promptly Refunded.

and let me tell you what sort of a hatching machine the Old Reliable is, before you risk your money on any other.

In this limited space I can give you only a few facts about the Old Reliable:

It has been on the market 34 years.

It is in use at many government experimental stations—U. S. Government, State Governments, and foreign governments.

It has **never been beaten at any competitive exhibition**—national,

international, state or county—holds **over 1200 First Prizes awarded on superior merit.**

It is the favorite incubator of the big professional poultry raisers, the successful incubator for amateurs—**nearly half a million now in constant use.**

The Reliable is the Only Incubator With a Double-Heating System

combining hot air and hot water. Copper hot water tank extends entire length of egg chamber, holding a large body of hot water over the eggs at all times—maintains the proper hatching temperature in any kind of weather.

The Reliable Incubator is built of the very best kiln-dried redwood, with double walls, top and bottom tongued and grooved. Has the most sensitive and accurate regulating system, moisture and ventilation perfect, and a Government Tested Standard Thermometer. Has double glass doors, roomy chick nursery—in fact, it is the recognized standard hatching machine of America, made in the world's biggest incubator factory.

Guaranteed to Hatch Every Hatchable Egg, Regardless of Climate, Altitude or Weather

and now sold at a price that makes it the biggest incubator bargain ever offered to the poultry world.

I want to call your attention also to my Reliable Bantling Incubators at sensationally low prices. They are world-beaters on quality and price.

If you will let me give you full information about the Reliable, and get my prices before you buy a machine, I can save you trouble and money.

A WEALTH OF POULTRY KNOWLEDGE

\$1

**All Three for the
Regular Price of One**

\$1

This offer will appeal to every red blooded poultryman. The monthly publications embraced in this offer are leaders in their chosen field and well known throughout the country. All three are pioneers—they have been tested and have passed the final examination—the “survival of the fittest.”

American Poultry Journal, Chicago, Ill.

Established 1874

Has the envious reputation of being “The One Great Poultry Paper of America.” It’s the oldest poultry paper in America and the largest and best poultry paper in the world. Its circulation covers the entire United States, Canada, Mexico, and several hundred copies are sent to foreign countries where the best is considered just good enough. It contains from 68 to 252 pages each issue, and is mailed to subscribers promptly on the first of each month.

American Poultry Advocate, Syracuse, N. Y.

Established 1892

Is one of the most widely known and consistently advertised publications in the field. It is composed of interesting and instructive reading and is conceded to be one of the best, clean-cut poultry papers in the east. Published monthly.

Poultry Item, Sellersville, Pa.

Another “breeder’s choice,” is well edited, progressive and instructive, finding popular favor among those poultrymen who enjoy good editorials, not “muckraking.” The helpful hints given in the many articles are advantageous to both amateur and professional. Published monthly.

**These three papers,
the choice of breed-
ers, will be sent to
you postpaid every
month for one year,
at half price.**

American Poultry Journal, 1 yr., \$1.00	} All 3 for \$1.00
American Poultry Advocate, 1 yr., .50	
Poultry Item, 1 yr., .50	

The three papers being sold together for the price of American Poultry Journal alone makes this one of the best offers which can possibly be made.

Both new and renewal subscribers may take advantage of this offer. New subscriptions will commence with current issue. Renewal subscriptions will be extended one year from expiration of present subscription. This offer void after May 31st, 1916.

A WEALTH OF POULTRY KNOWLEDGE

Save One Dollar

Here is your opportunity to get the three oldest poultry papers in America at half price. All three are published monthly—filled with good, sound, helpful advice, which may save you many times the cost of your subscription.

**Three for
the price
of One—**

That's what
you get when
you subscribe
to this com-
bination at
this time.

American Poultry Journal, Chicago, Ill.

Established 1874

"The One Great Poultry Paper of America" is conceded by all to be the leading poultry paper of the world. It contains from 68 to 252 pages in each issue, profusely illustrated; contains no free reading notices or puffs for advertisers, but sound common sense articles, the kind that are profitable to both amateur and professional poultrymen. Mailed to subscribers promptly on the first of each month, it arrives when expected and avoids disappointment.

Western Poultry Journal, Cedar Rapids, Ia.

Established 1889

Has long been recognized as one of the most up-to-date and progressive poultry papers of the West. Edited by E. E. Richards, the present President of the American Poultry Association. Clean, instructive common sense articles on the care of poultry—and editorials of like nature make this one of the favorite poultry papers in the Western States.

Poultry Keeper, Quincy, Ill.

Established 1883

Is the second oldest poultry paper of America. Although not as large as the other two, it has a following of readers who stand by it like the "Rock of Gibraltar." The many interesting articles each month make it well worth reading and it fits nicely into this well selected combination of poultry papers.

American Poultry Journal, 1 year, \$1.00	} ALL FOR \$1.00
Western Poultry Journal, 1 year, .50	
Poultry Keeper, 1 year, .50	

No matter where you are located, how many chickens you keep or how much you know about poultry, you cannot afford to let an opportunity like this slip by. Think of it—**ALL THREE** for the regular price of American Poultry Journal alone.

Both new and renewal subscribers may take advantage of this offer. New subscriptions will commence with current issue. Renewal subscriptions will be extended one year from expiration of present subscription. **This offer void after May 31st, 1916.**

The Great Incubator Value of 1916

This Is My Master Production

FRRIEND, you take no chance with the 1916, "Peerless-66" Hatcher. Tested by the tens of thousands under all conditions for the past four years, I offer you now in the improved 1916 "Peerless-66" the finest, the cheapest, the most efficient hatcher I have been able to produce after 30 years in this business.

over 50 Improvements for 1916

This 1916 Peerless is the one Hatcher without a fault. It is the last word—finality. I do not see where one screw could be changed to make it better. Its record of hatches in the hands of users all over the world has never been equalled. I guarantee it to hatch every egg that is hatchable.

Note the 16 Great Features Below

This is the only practical, all-metal, fire-proof, ever-lasting machine ever produced. The only machine of its size with a perfect heating and heat-distributing system. The only incubator ever produced alike adapted to the largest poultry raiser and the beginner as well.

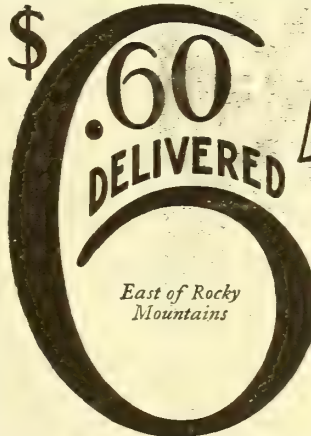

The "Peerless-66" is built on the famous Sheer Unit System. Small enough to give the greatest efficiency. Large enough to give the greatest economy. Good enough so it will last for years—just add more units as you need them.

Hot Air or Hot Water

at the same price. Never before has such an offer as this been made. We recommend the hot air, however, as equally as efficient as any hot water machine ever built and most satisfactory for general use. However, you are the judge—you take your choice—and all at the same wonderful price.

Guaranteed

We give the broadest and most liberal honest Guarantee ever given on a hatcher. I am so sure and positive of what this hatcher can and will do, because I know what it has done, that I guarantee the Peerless-66 to hatch every egg that can be hatched.

East of Rocky Mountains

**Heat
Moisture and
Ventilation
—All Are Perfect**

The three great essentials—heat, moisture, ventilation—all these are perfect in the "PEERLESS-66"—all automatic, all interlocking, all working together as a self-regulating unit. This is true of no other hatcher. The machine is equipped throughout with the famous Sheer fixtures. The wonderful Sheer Wafer Thermostat Regulator automatically controls heat, regulates moisture and ventilation. Overheating is impossible. The heating plant is a marvel. Simple, positive, unailing.

No heat is wasted. There are no corners, no cold corners. No chilled eggs. This system affords the most perfect heat ever attained in any incubator in the world.

Send for This Great Book and Record of Results

The new Peerless Book is ready. It tells the facts about the Peerless-66—the additional facts we have not space for here—the truth, the whole truth and nothing but the truth. It contains the testimony of those who have used the Peerless metal hatchers and who are glad to tell you of their satisfaction and results. Send for this book today—it's free—your copy is ready—or better yet, send us your order NOW.

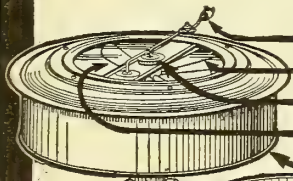

The Marvelous Price of the Peerless-66 for 1916 is \$6.60. Delivered, anywhere east of the Rocky Mountains.

Pacific Coast price, \$7.00, delivered.

It is the biggest incubator value the world has ever seen.

Peerless Brooders

are as wonderful as Peerless Incubators in efficiency, in economy and in rearing strong chicks. Heated automatically by simple hot-water coils at top, lamp outside, cannot overheat, injury to chicks impossible. Biggest improvement in brooders ever known.

Every Chick Joins The Rush

To get his share of Conkey's Buttermilk Starting Food—the baby chick food with buttermilk in it.

Try it out yourself. You can get a free sample package, enough to feed five chicks one week, at any seed, feed, druggist or hardware dealer who carries Conkey's Poultry and Stock Remedies. If there is no Conkey dealer near you, send us the name of the dealer from whom you regularly buy your poultry supplies and we'll send you one of these big samples of Conkey's Buttermilk Starting Food.

Poultrymen have long known the desirable qualities of buttermilk as a food for little chicks. They knew that the buttermilk was just the thing needed by the delicate digestive tract of the baby chick. They knew the good results obtained in feeding buttermilk to little chicks to keep off White Diarrhea, the dread of every poultryman who ever raised a hatch. The trouble lay in getting good buttermilk, clean and sanitary and getting it regularly.

Conkey's Buttermilk STARTING FOOD

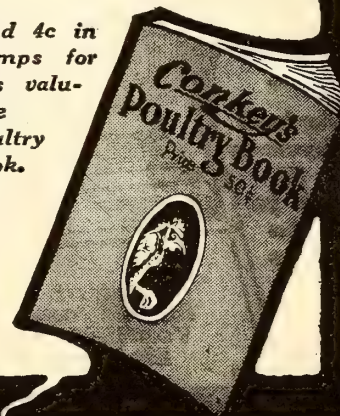

is the result of the attack on this problem by Conkey poultry experts and Conkey chemists.

First they secured a sure, constant supply of good buttermilk. Then they evaporated off the water that forms 90 per cent of the buttermilk, leaving only the digestive and food elements in a dry powdered form. Next they mixed the buttermilk with a balanced Starting Food of clean wholesome grains, just right to help the little fellows over those critical first three weeks and bring them out, strong and sturdy.

In every hundred pounds of Conkey's Buttermilk Starting Food you buy you'll get the equivalent of approximately 50 pounds of good buttermilk. All the good qualities without the muss and fuss. Best for the chicks and best for you. A complete food in itself, not a medicine. Get your sample—now.

When disease gets into your flock—Don't Worry—Conkey will cure them. The Conkey Poultry Line contains a specific remedy for each poultry disease. Guaranteed to do the work or your money back. Buy Conkey's Poultry remedies on that basis.

Send 4c in stamps for this valuable Poultry Book.

POULTRY RAISERS, Here's My Best Incubator and Brooder Offer in 21 Years of Experience

J. S. GILCREST
President
Life Member American
Poultry Association

Send Me Your Name at Once for Full Details

In all my experience I have never been able to equal the offer I am making this season on "Successful" Incubators and Brooders. This year, when prices in materials everywhere have advanced, I am not asking an extra nickel over the former price for the "Successful"—the big king of them all in quality—yet I am giving you the same heavy copper tank, the heaviest on any incubator made; the same leak-proof and wear-proof tank construction and unbeatable case. In short, every one of the big quality features that have made "Successful" Incubators the pride of successful poultry raisers in all parts of the country. Read the 20 Big Points for success in panel to the right and write me for this remarkable quality and price offer. Go in for big profits and succeed with

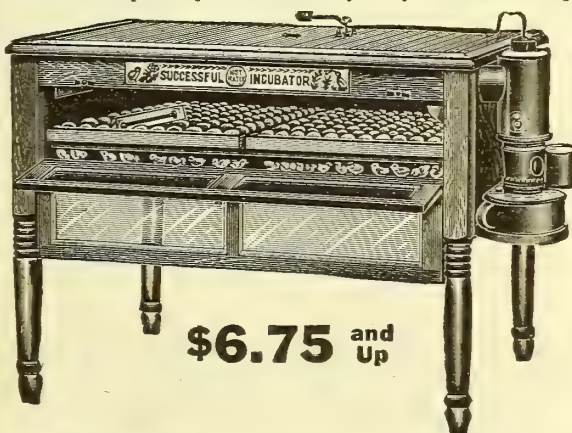

"SUCCESSFUL" Incubators and Brooders

Remember that back of these machines there are 21 years of success. They have stood the test for more than a generation. The principle of construction has never called for change. It has made good and more. Was built correct in the first place—has proved economical, dependable and productive of big hatches of sturdy, healthy chicks.

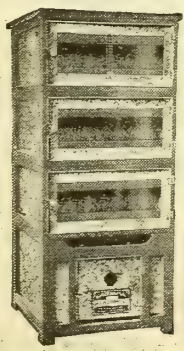

No matter what incubator you now favor, get my offer. Learn how you can be sure to succeed with the "Successful." Not only for one year—but for many years—not only with spring hatches but hatches at any time of the year, even in coldest weather—this is the incubator that I personally and the Des Moines Incubator Co. stand back of and positively guarantee will hatch larger and stronger chicks and larger percentages than any other incubator when operated under the same conditions. The only incubator in the world that is cabinet made. The only hatcher that heats around the colder edges of the body first. Guaranteed to vary not over a fraction of one degree throughout the entire hatch—because of the fact that our own patented lamp and wafer thermostat regulator are 99.9-10 per cent perfect. Write today for my "Successful" catalog free.

Tells the real facts about present-day construction in incubators and brooders. Frank and comprehensive—tells how to insure success. Write for my book if only to get my low price offer and guaranty—the strongest guaranty ever put behind an incubator. Succeed with the "Successful" this year. You want "Successful" Brooders, too—the only brooders made with automatic heat regulator—therefore the best chick preservers. Address

"SUCCESSFUL"
ALL-STEEL SECTIONAL
GRAIN SPROUTER

Answers the feed problem—takes care of young chicks too—makes them grow. Made entirely of steel—double walls—fireproof—cannot warp, shrink or swell. Lasts a lifetime. Write today for booklet and 1916 offer.

Famous little booklet
"Proper Care and Feeding
of Chicks, Ducks and Turkeys"
sent for 10 cents. Big poultry catalog is
FREE. Write for it today. We also
have high-grade poultry—stock and eggs of all
the leading varieties—land and water fowls.

The 20 Big Strong Points for Success

- 1—I personally guarantee that the "Successful" Incubators will hatch larger and stronger chicks and a larger percentage than any other incubator when operated under the same conditions.
- 2—My remarkably low price offers with high quality.
- 3—The only hatcher that heats the colder edges of the body first.
- 4—Round corners on tank, giving faster current, more heat, even regulation.
- 5—Heaviest copper tank used on any incubator.
- 6—Only one scientifically ventilated. Admits cold air at center of top. Does not create draft which dries out eggs.
- 7—Safety attachment on lamp burner—provides absolute protection from fire.
- 8—Only incubator with two glass doors—through which thermometer may be seen.
- 9—Combination wafer thermostat regulator.
- 10—The only machine guaranteed with a guaranty that guarantees and evades no issue.
- 11—Built like a refrigerator.
- 12—Case non-warpable.
- 13—Weighs more.
- 14—Costs less per pound.
- 15—Strongest, most durable egg trays.
- 16—Nursery under egg trays. The greatest feature applied to artificial incubation.
- 17—Detachable legs, allowing machine to be stored in very small space.
- 18—The only incubator in the world cabinet made.
- 19—Simple, effective application of moisture when necessary.
- 20—Adjustable thermometer. Never necessary to open doors or pull out the trays to read temperature. Thermometer is stationary; chicks cannot knock it over.

Here's the Secret of Big Hatches

THE heat from the lamp underneath first strikes the X-Ray Vapor Generator, creating a mild moisture which pervades the entire egg chamber. The heat passes on to the X-Ray Duplex Heater, which carries it to every corner, each egg receiving the exact amount of heat and moisture necessary to hatch it. This simple method is an exact duplication of nature's way of hatching—without it you cannot hope for the biggest hatches. Nobody else can duplicate this construction, for it is completely covered by X-Ray patents. But back of these patents are men with the know how. Men who have spent their lives building incubators and studying incubators with one thought of Biggest Hatches of Sturdy Chicks uppermost in mind.

**One Gallon
of Oil**

**One Filling
to Hatch**

**Express
Prepaid**

**Hinged
Glass Top**

It's this incubator know-how that has made the X-Ray the foremost machine. This incubator know-how accounts for the amazing records made by the X-Ray in all parts of the world. Don't let anybody tell you that all incubators are alike or nearly so. You know how some incubators cook the eggs by a hot, dry blast. You know how others spoil the hatch by failing to maintain the exact temperature—the mild, moist temperature that is necessary for the biggest hatch. In these features and in thirteen other special features the X-Ray is different and way ahead of the others.

Read About the Fifteen Special X-Ray Features in Our Big FREE Book

We have published some mighty fine incubator catalogs in our day, but none of them equals our *Big 1916 X-Ray Incubator and Brooder Book*. Get it free. It tells all about the fifteen exclusive X-Ray features. Tells about the central heating plant of the X-Ray. The lamp squarely underneath, every particle of heat used, big saving of oil. You ought to know all about the X-Ray

big tank. Only one filling to a hatch. Think what that means, all the work and worry of filling the tank daily done away with. You ought to know all about the X-Ray Automatic Trip which automatically, unfailingly keeps the temperature exactly right. Before you buy any incubator you ought to know all about the X-Ray and the big free book tells everything.

Get Your X-Ray by Express Prepaid

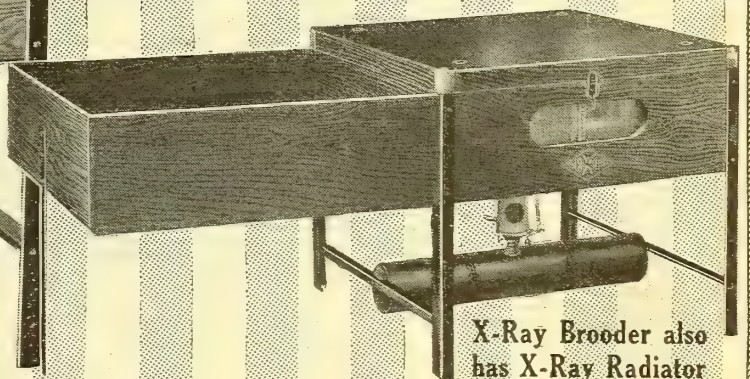

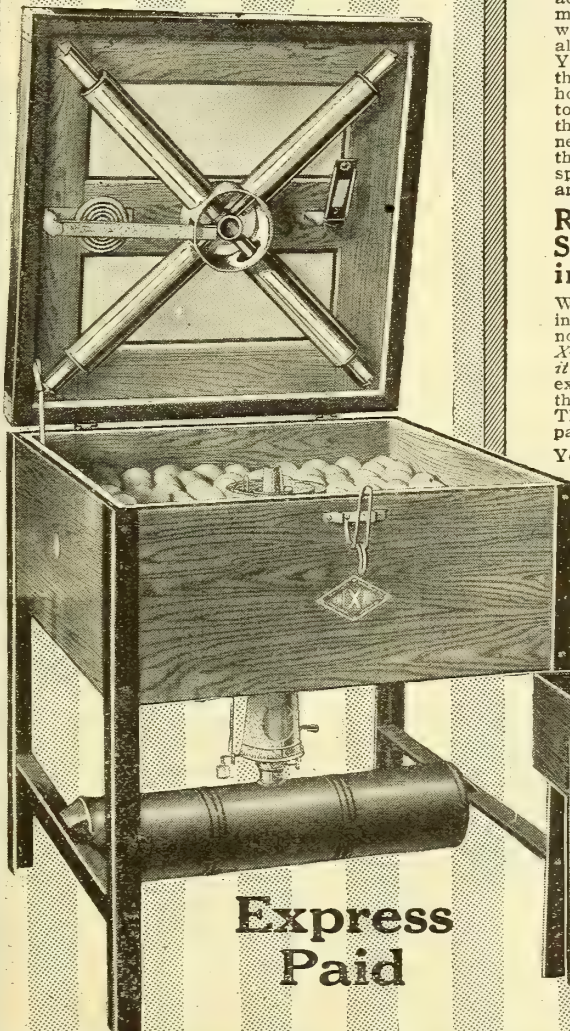

That's another big point to think about when buying an incubator. Don't risk expensive delay by slow freight shipments. Every day saved counts big in the final results. You'll save many days by getting your X-Ray by Express Prepaid. Practically all X-Ray Incubators are now shipped by this rapid method, the only exceptions being the few isolated cases out of the express zone.

Get started right by sending today for the Free X-Ray book. It's full of facts you ought to know. Everything is told and pictured in an interesting, common sense way that makes it easy to understand. Send for the *X-Ray 1916 Book No. 10* tonight.

The X-Ray Incubator Co.

Dept. 10

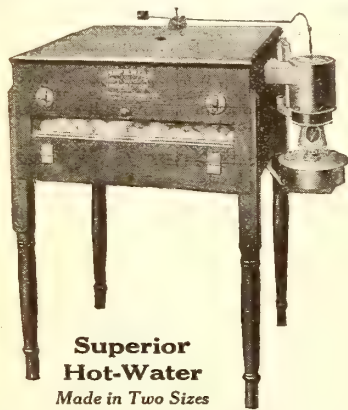

Des Moines, Iowa

The Cyphers Co's Way-

EVERYONE who wants to raise chicks for profit or pleasure—who wants **big hatches** of strong, rapidly-growing chicks—will **insure success** by following the “Cyphers Way.” Tens of thousands of successful poultry growers in all sections of this country, in Canada, and in foreign lands, use Cyphers Company's equipment, and **follow our methods.**

On large practical poultry farms, where thousands of chicks are hatched each season; on small poultry plants, where one or two poor hatches may mean a serious set-back—in fact, wherever chicks are hatched in large or small numbers, Cyphers-built Incubators have been for the past **twenty years**

**Superior
Hot-Water**

Made in Two Sizes

Prices: 65 Eggs, \$12.00. 130 Eggs, \$16.00

the acknowledged leaders—they **hatch better, last longer**, require **less attention** and produce **larger and stronger chicks**—“the kind with the kick in them.”

What other successful poultry growers have done with their Cyphers machines, YOU, Reader, can do to-day.

Why take chances—why waste time and money with **inferior** equipment?

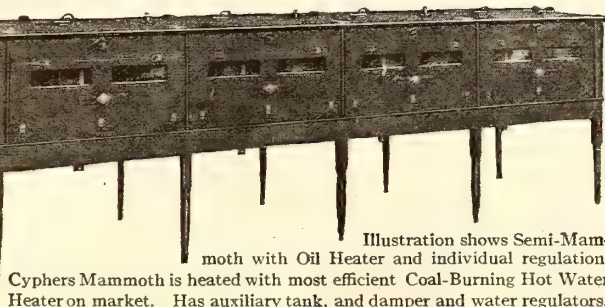

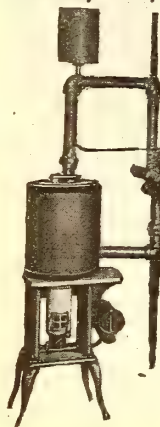

Illustration shows Semi-Mammoth with Oil Heater and individual regulation. Cyphers Mammoth is heated with most efficient Coal-Burning Hot Water Heater on market. Has auxiliary tank, and damper and water regulators.

Cyphers-Built Incubators \$12 to \$40

Three Styles—Eight Sizes

In these machines you get the benefit of the twenty years experience of the **most expert incubator makers.** They are the logical incubators for poultrymen who have reached success, and are **especially valuable for beginners**, who thus can depend upon getting **big, successful hatches right from the start.** Whether you prefer a hot-air or hot-water incubator, there is a Cyphers-built machine in a size to suit your needs.

The Superior Hot Water Hatcher

Has all the time-tried features of Cyphers Standard of design, construction and finish. The water boiler and tubular tank heating system are of heavy-weight copper. Lamp has seamless bowl; burner is best on market; case is **wood**, attractively finished in golden brown, with brass trimmings; has **double walls**, well insulated; equipped with Standard Cyphers Complete Regulator. Has **forced water circulation**; is automatic in ventilation. (See illustration.) **Fully guaranteed.**

The Standard Cyphers Incubator

The machine that for **twenty years** has been recognized as the “**standard hatcher of the world.**” Tens of thousands of them are in successful use in every civilized country on the globe. They are the last word to date in incubator building. Are built to hatch successfully in **all climates, under widely different conditions**, in the hands of all sorts of people, and with reasonable care will last a lifetime. (See the illustration herewith.) **Satisfaction guaranteed.**

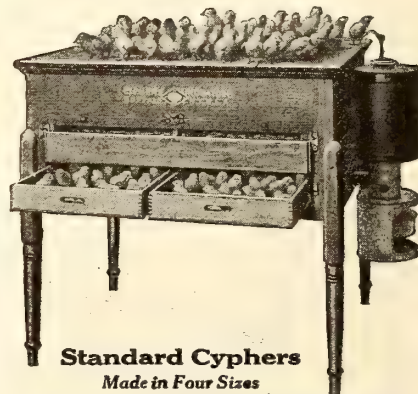

**Columbia
Hot-Air**

Made in Two Sizes

Prices: 140 Eggs, \$16.00. 250 Eggs, \$22.00

The Columbia Hot-Air Incubator

The best incubator on the market at the price. Has **wooden** case, attractively finished in dark green, with brass trimmings and **double, well-insulated walls.** Seamless-bottom lamp bowl, best quality brass burner, **Cyphers complete regulator.** Fume-proof, forced-draft heater. Automatic in ventilation and embodies **diffusive** principle. **Fully Guaranteed.**

Standard Cyphers

Made in Four Sizes

Prices: 70 Eggs, \$15.00. 144 Eggs, \$23.00
244 Eggs, 34.00. 390 Eggs, 40.00

Cyphers Mammoths and Semi-Mammoths

The latest-pattern Cyphers Semi-Mammoth Incubators, for 1,200 and 1,600 eggs, and the Cyphers Mammoths for 4,000 eggs and up, are **built in sections**, on the same principle and with the same high-grade materials that have made the Standard Cyphers famous. **Most efficient and economical** large hatchers on the market. Sections are crated separately for safe shipment; are easy to set up; fully guaranteed. Write for Special Circular.

Hatching and Brooding Chicks

YOUR season's profits will depend largely upon the number of *strong, rapid-growing chicks* you are *able to raise*. Every requirement for successfully raising chicks is provided in the "Cyphers Way." It is necessary to have a Brooder or a Brooding Hover that can furnish all the heat needed for the chicks in the *coldest and most changeable weather*. A *dependable regulator* is essential, and to be strong and vigorous the chicks must be provided automatically with a *constant supply of pure, fresh warmed air*. All these *highly important essentials* are embodied in Cyphers Brooders and Hovers described herewith.

The Cyphers Coal-Burning Colony Hover

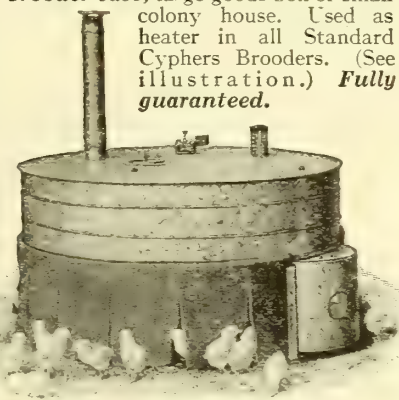

With this Hover you can brood chicks in flocks of 300 to 1,500 each, and do it *more cheaply* than ever before. In health of chicks, in low cost of labor and fuel, in simplicity and ease of operation, Cyphers Coal-Burning Colony Hover *has no equal* where chicks are to be brooded in large numbers. Its ample fuel capacity and automatic regulator will keep the chicks warm throughout the *coldest night*, maintaining a regular temperature of from 90 to 95 degrees under the hover and keeping the entire room comfortably warm. Made in *five sizes*. Write our nearest office for Special Circular.

Cyphers Colony Hover. Price, \$15.00 Up.

The Cyphers Adaptable Brooding Hover

For outdoor and indoor brooding. A popular and efficient Brooder at a *low price*. Tens of thousands of these standard Hovers are in successful use in all parts of the world. Is *self-regulating, self-ventilating, fume and gas-proof*, all-metal, and fire-proof. Lamp positively cannot blow out. Easily attached to *home-made brooder case*, large goods box or small colony house. Used as heater in all Standard Cyphers Brooders. (See illustration.) *Fully guaranteed*.

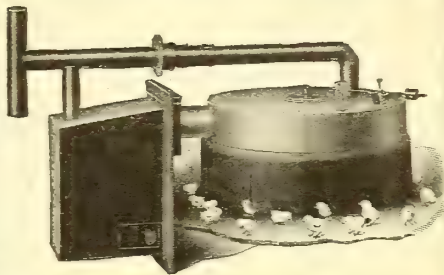

Cyphers Portable Hover. Price, \$9.00.

The Cyphers Portable Brooding Hover

Provides a *low-cost*, convenient, practical way to brood little chicks indoors. Set it down anywhere indoors and you will have a safe and comfortable home for the little chicks. "Movable" at a moment's notice without even turning down the lamp flame. It is an all-metal, *self-regulating, self-ventilating, complete brooding device*, automatic and economical. Does not need a brooder case or box enclosure. Chicks are on the level of room floor all the time. (See illustration.) *Fully guaranteed*.

Cyphers Poultry Foods

Equally important with proper brooding is *correct* feeding. The "Cyphers Way" provides a *complete* line of balanced-ration, special-purpose poultry foods. Look up our "Poultry Food" Advertisement on another page.

Cyphers Adaptable Hover. Price, \$9.00.

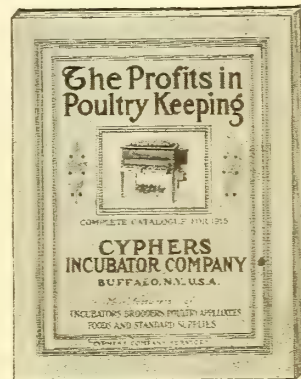

Cyphers "Free Service"

Whether you are a customer or not, you can *write* our "Service Department" for any information you may require in your poultry work or to *solve your poultry problems*. You will receive a prompt and helpful reply.

We want you to have our *free books and bulletins*—all well illustrated, practical and instructive—a *complete course in poultry raising*. Read our 1916 Year-Book for full information.

Send For Our 1916 Big Free Year-Book

We urge every reader to *write today* to our nearest office for a *free, post-paid copy* of this 172 page *Complete Illustrated Guide for Poultry Raisers*. A postal card will do. Read all about the "Cyphers Way" of making *big profits* with poultry—of building up an *independent, money-making poultry business*. Tells how you can pay for

your incubator by hatching and selling day-old chicks. The introductory "Open Letter," by Grant M. Curtis, President of Cyphers Company, is worth *many dollars* to every earnest, thrifty poultry keeper who will read and heed the practical advice it gives. **Write Today, Before You Forget It**

POORMAN'S

200 EGG

STRAINS

Stock, Eggs and Baby Chicks

from profitable layers is your only guarantee for success in the poultry business.

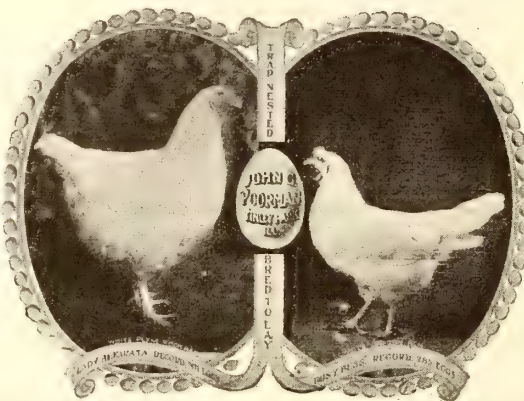

ISN'T it a serious matter when eggs are selling at 40c to 60c a dozen and your hens are not laying? Ask the man who has failed. Also ask him if he would recommend the breeder he bought his stock from.

You cannot be too careful in the selection of your foundation stock; the stock from which you will produce your future layers. **I breed for eggs** and can supply you with stock that will lay when the egg prices are high.

THAT MEANS YOUR SUCCESS

Eggs

My breeding pens are now mated, and I can usually make shipment of eggs promptly upon receipt of your order. I would, however, advise that your order be booked in advance. This will assure delivery when you desire them. Prices, 10c, 20c and 30c each.

LADY ALFARATA, Record 301 eggs

BUSY BESS, Record 285 eggs

Baby Chicks

I will commence hatching operations January 1. I am now booking orders for baby chicks for delivery any time thereafter, weather conditions permitting. Early orders simplify matters and assure mutual satisfaction. Instruct me to book your order now. Prices, 20c, 35c and 50c each.

Buy Your Foundation Stock Now

In all of my eight varieties, namely, White and Buff Orpingtons, White and Barred Rocks, Rose and Single Comb Reds, White Wyandottes and Single Comb White Leghorns, I can supply Breeding Stock, young or old, that will produce a future flock of the kind that has in the past given entire satisfaction to over 3,000 customers. I herewith present your opportunity to start right. My free instructive catalog has helped others and will undoubtedly help you. Write for your copy today.

VICTOR BRADLEY—PIONEER POULTRYMAN

VICTOR BRADLEY, of Bradley Bros., Lee, Mass., was born in his home town in 1868. He has been a farmer and breeder of fancy poultry for over thirty years. Since 1882 he has bred Barred Plymouth Rocks and has specialized in this variety for the past twenty-three years.

The Bradley Farm has been in the family for five generations and has been noted for bee culture and fancy Holstein dairy cattle for many years. The farm once paid as high as \$30 for a single bee for producing purposes and at one time imported 162 head of Holstein cattle direct from Holland. The poultry interests of this farm are better known in the name of Bradley Bros. The show records of Bradley Bros.

Barred Plymouth Rocks have been too well advertised to need mention here and it is sufficient to say that Bradley birds have been prominent in the winnings for 26 years in leading American shows.

Bradley Bros. claim the distinction of having bred and sold the highest priced Barred Plymouth Rock ever purchased for cash. The firm exports many fine fowls each season and has sent numbers to Japan, South Africa, Russia, England, Porto Rico, Jamaica and South America. Mr. Bradley is prominent in church and Masonic interests in his home town and is owner and manager of a 100 acre stock farm which has a quarry noted for its superior marble, which has been used in Government buildings in some of the largest cities of the United States.

Using Coal Burning Colony Brooders

Some Points on the Successful Management of Chicks in Large Flocks. *By Maurice H. Decker*

DURING THE PAST FOUR YEARS we have successfully used the coal burning colony stove brooders, which are capable of caring for large flocks of chicks and we believe they have firmly established their right to a place on every farm where considerable numbers of business chicks are reared each year. We have tried out three different styles of these brooders, have installed them in numerous sizes of buildings ranging from 8x8 ft. up to 16x20 ft., brooding chicks in flocks of 350 up to as many as 1,100 about a single stove, and have found them very economical in operative costs of both fuel and labor. Any poultryman can readily comprehend at once the difference in the amount of fuel and labor required to brood a dozen separate flocks of 50 chicks with kerosene lamp heaters and the same number about a single stove burning hard coal. In cold, wet seasons we have frequently burned $1\frac{1}{4}$ cent's worth of oil to a chick before our broods were old enough to do without artificial heat, while to date the most any of our coal brooded flocks have cost for fuel has been under $\frac{1}{2}$ cent each.

Another important advantage of the coal stove brooder is its adaptability to almost any size and style of building the poultryman possesses. This brooding equipment makes unnecessary large sums of money tied up in expensive brooder houses, which are usable but a few months of the year, a point that appeals very favorably to the tenant upon rented ground, the beginner making his start with day-old chicks, or the man who has not the capital to invest in costly brooding plants. The stove brooder can be set up ready for use or taken down to be stored away or replaced in another building in less than half an hour, and the house it has occupied kept in use straight thru the year for housing the pullets it has sheltered as chicks. We find this practice of brooding pullets in their future laying quarters insures more rapid development and earlier laying than when they are shifted first to colony, then permanent Winter houses. As an example of the convenience and adaptability of the colony brooder I offer a little of our own experience of last year. A customer for whom we were saving 400 day-old chicks delayed coming for them until they were three days old and then telephoned us that he could not take them at all. This put us in rather a hole, for every available brooder we had was full to the limit. The only thing we could do was to keep them in boxes around the kitchen stove until the problem of making room for them was solved. This was done, and it was finally decided that a brooder stove be ordered by telephone. Accordingly we phoned a dealer in a neighboring town we knew personally, who had a couple in stock and arranged for one to be expressed at once. In the meantime we cleaned out an 8x10 ft. colony building, cut the hole for the pipe, put in the litter and made all ready for the chicks. The stove came just five hours after we got the dealer on the 'phone, and was set up and a good fire going in twenty minutes more. We put the chicks about it at once and sat up the greater part of the night regulating and watching the fire, and after that they did fine, causing us very little trouble.

When thru with our stoves for brooding purposes we have used them with success to heat our work-shop and laundry and for sprouting oats for our fowls. This latter we accomplished by setting a stove up in a 12x12 ft. building with cement floor which is scrubbed clean and covered with an inch layer of soaked oats under the hover. A slow coal fire is maintained with little trouble and the grain sprinkled with warm water once a day. In this manner we frequently have produced a six-inch growth of sprouts in ten days' time.

By using the stove brooder in portable buildings the poultry raiser can escape the serious danger of soil contamination, a condition always to be reckoned with where fixed brooder houses and yards are used. We find it very advan-

tageous to be able to move our broods of chicks just where they will be best protected and have access to the most green food at the stage of growth it will do them the most good. During wet, dark days we find the chicks should be out away from all shade in order to get the much-needed sun-light which is usually a scarce article in early Spring, and later in the season they do best in the orchard where there is the necessary protection from the heat. Also there are about the farm many small left-overs and gleanings from the various crops that will help the young birds along and all this is easily taken advantage of when one uses the portable brooders.

Our experience has taught us that the most satisfactory building in which to install the colony brooder is one with a double board floor capable of being divided in two rooms of equal size, one to contain the heater and the other to be used for feeding and exercising the chicks. Such a building should range from 8x16 ft. to 12x24 ft. in size, anything larger or smaller being less satisfactory. To furnish this amount of room and still preserve the advantages of the portable brooder house we move two of our 8x8 ft. or 8x10 ft. colony houses up close together so their sides touch and cut two low wide doors in these adjacent sides for the chicks to use in passing from one to the other. All cracks between the corresponding doors and sides are closed tight with strips of roofing paper to conserve the heat and prevent any drafts. This combination of colony houses gives us the two separate compartments each accessible by a door in the front and can be moved separately and joined together in a very short time. Then when the chicks are old enough to be weaned, we remove the heater, place half the flock in each building and move them a short distance apart.

The most satisfactory floor upon which to brood chicks in flocks of any size that we have ever seen or heard of is made as follows: First we lay down a sub-floor of most any kind of cheap rough boards, placing them diagonally across the sill and joists which makes an unusually rigid construction especially for colony houses intended for moving. If knots or large cracks are found in these rough boards we cover them with scraps of roofing paper tacked upon the under side. Over them we lay either a heavy grade of tar building paper or cheap one-ply roofing, which can sometimes be purchased for as little as 60 cents per roll. This is lapped with two-inch seams, over which are nailed lath which provide nailing strips for the top floor of planed matched 1x6 yellow pine. When given a good coat of asphalt or creosote we have a lice-proof, wind-proof, cold and frost-proof floor suitable for any kind of poultry work. This floor may be raised upon blocks or stones and all sides left open below, which will eliminate all trouble from rats.

A double compartment brooder house is practically a necessity when the colony brooder stove is used. In cold weather the exercise room furnishes the chicks a sheltered place to be fed and a place to be confined when their sleeping room is being cleaner and aired. Even in very cold weather we believe baby chicks require a temperature lower than that of the brooding chamber in which to exercise and scratch; if they are to remain healthy, make rapid growth and acquire strong powers of resistance. As soon as they are properly trained to scamper back to the hover to warm up when chilled they should be encouraged to spend a considerable part of their time in the cooler exercise room, or even out of doors. We have given our colony brooder chicks outside runs as early as March 1st, when the earth was frozen and a light snow had to be scraped off the ground, with very good success, as the coal burning stove furnishes ample heat to quickly warm them up when a thawing out is necessary.

While as many as 1,500 chicks have been successfully brooded about a single stove we believe the average poultryman, and especially the beginner, will have better success with flocks of 400 to 600 chicks. We seldom put more than this latter number in one building, more frequently running

our hatches in flocks of 400 to 500. Even with the lesser number the operative costs per chick are very low. Last season, which was a record breaker for cold, wet weather, we gave some of our broods heat until they were nine weeks old and our stoves only consumed an average of 40 pounds of coal each seven days.

The beginner's main trouble in operating the coal burning brooder will be the difficulty in preventing the fire going out on warm days when little heat is required by the chicks. This trouble and the work of rebuilding the fire when evening approaches can be avoided by keeping up a good steady fire, no matter what the outside temperature may be, and cooling off the interior of the building by the opening of the doors and windows. The small volume of fire pot space in the brooder stove will not permit a hard coal fire to be throttled down by the regulator, for many hours at a time, without going out entirely. Vigorous shaking and dumping of the fire will also result in the extinguishing of a slow fire, so the safe plan is always to open the drafts wide and allow the fire to burn up vigorously for a few minutes before commencing these attentions. We also find that frequent shaking will result in the partially burned coal and ashes becoming so packed at the base of the fire that the draft is completely shut off, causing it to gradually die out. This can be remedied by using a straight piece of heavy wire to carefully pick open a few holes thru the ashes for the air to enter. This is done after each shaking of the grates. Never attempt to poke or stir up a hard coal fire to make it burn up faster, especially in the small brooder stoves, as this is the surest way to extinguish it. We keep a small box of short pieces of hard wood in the brooder house and, in case the fire does get too low to be saved, we clean out the ashes as quickly as possible and with this wood and a pint or so of kerosene can get "steam" up again in a few minutes. It does not pay to wait for a very slow hard coal fire to burn up if your chicks are getting cold. The best way is to dump it out and start another.

To obtain the proper draft the brooder stove should have at least ten feet of pipe extending straight up thru the roof of the building. Elbows always cut down its efficiency and a good stiff draft is necessary to enable the fire to climb up quickly when the stove is opened. To make a water tight joint about the pipe we used a galvanized iron chimney, procurable at any hardware store and which is a tapered piece of pipe with a flange soldered to it at the proper angle to fit the pitch of the roof. This is nailed over a hole cut in the roof and the edge seams calked with asphalt cement. The stove pipe from the stove goes up inside this chimney and that from above slips down over, making a perfectly weather proof joint. We use nothing but galvanized metal pipe and chimney, for the common black iron goods do not last long enough to warrant putting them up for longer than one season. When the pipe and stove are removed we cut a circular piece of heavy roofing fabric, slightly larger than the diameter of the chimney's top, and nail it to a foot length of 4x4. This is slipped down in the chimney from the top where its weight pulls the roofing down over the sharp edge of the metal, forming a wind and rain proof cap that will never blow off and can be removed in a second.

As hard coal forms the safest variety of fire, there is considerable less risk when the coal brooder is used than with kerosene and last year we found it an easy matter to have several small buildings, in which this type of heater was used, insured.

To ventilate the brooder compartment we use muslin covered windows in the front of the house which, supplemented by the automatic ventilation of the stove's draft, furnishes a constant supply of fresh pure air about the chicks' heads, an absolute necessity for health, good appetites and rapid growth. The stove brooder is the only type we have ever used which enables the fresh air "crank" to supply his broods with an abundance of oxygen without a waste of expensive fuel. We endeavor at all times to keep our windows as far open as possible and make up for any coldness by forcing the stove along.

Three days before our hatches are due we have the colony stove set up and burning. This gives us plenty of time to make sure it is working correctly and properly regulated, so when the chicks are out our main efforts may be devoted to

starting them off right in life. We use a litter of wheat straw cut up in inch lengths in a feed cutter, placing it about two inches deep about the stove, and eight to ten inches deep in the exercise room. When we have a good number of broods going and are pretty busy we lay cheap building, or even newspapers, on the floor under the litter, making sure, however, it is all covered so the chicks cannot get to it. This simplifies the operation of cleaning, as all we have to do is to roll up and remove the paper. Our chicks are always placed under the hover in the evening and confined there with a foot wide strip of quarter inch mesh galvanized wire cloth stood on edge. This strip is about 25 feet long and, by lapping the ends past each other, its diameter may be increased to give the chicks the run of the entire floor, or contracted sufficiently to hold them close under the hover. This keeps them under our complete control for the first few days, making it possible to allow them just the exact amount of liberty we wish them to have.

The next morning they are allowed to spread out about two feet on each side of the hover, where we look them carefully over and give them food and water. There are two of us for this task, and we spend the entire day educating the tiny little fellows in the ways of feed and water and in teaching them to scurry back close to the stove when cold. We have found that a few hours well spent in the first few days of a chick's life, in giving him proper training, will save weeks of worry and trouble, to say nothing of serious loss in the months to follow. We continue to keep them within the wire fence for the first three days, or even longer, if they display any reluctance about entering the hover when we think they should, giving them a little more liberty each morning. In case of trouble such as "piling up," all that is necessary is to draw the ends of the wire together and one person easily moves 500 chicks up under the hover. This is one of the principal secrets of success with raising chicks in large flocks. Keep them under constant control and do not allow them any more liberty or privileges than they are capable of using to advantage. You must particularly guard against your young chicks getting wet in cold weather. If they become even damp they are liable to run to the house and pile up in its corners. I still have a vivid memory of one day three years ago, when a flock of 800 four-weeks-old Barred Rock chicks were caught in a sudden shower and ran to the brooder house where, finding the fire out, they started to pile up three and four deep in the corners in an attempt to warm up. By quick work in scattering them with brooms my wife and I managed to save all but 68 from being smothered, and this incident thoroly taught me the necessity of closely watching weather conditions and of keeping up a good steady fire, when one has large flocks of young birds running out of doors.

When the chicks are thoroly "hover broke" they are fed in the exercise room, which has previously been prepared for deep litter feeding as follows: We first spread a layer of cut straw two inches deep over the floor, then scatter over it 100 pounds of chick food (a mixture of finely cracked grains), then repeat with more litter and feed until we have five layers of the one and 400 pounds of the other. The chicks are started scratching and digging by a few handfuls of grain thrown on the surface, and it is but a short time before all are busily earning their meals. We continue to feed by hand a gradually decreasing quantity of grain until we are sure every chick has had ample opportunity to learn this source of supply and how to reach it. The 400 pounds of chick food, supplemented by the dry mash and sprouted oats fed separately, will last a flock of 50 chicks about five weeks, when the litter is removed and another chick "shortcake" prepared. The advantage resulting from this practice of burying the chick food are many. First, it saves considerable of the time required for hand feeding and insures every healthy, thrifty chick getting his full share. It is the only method we have ever tried that will keep large flocks from acquiring the very bad habits of toe-pecking, feather-pulling and huddling in corners. The exercise makes husky, strong muscled fowls, capable of standing the heavy feeding necessary to develop profitable market chickens and heavy layers. Any individuals that show a reluctance to work for their food are removed from the flock to a separate pen and hand fed until large enough to market, for in all probability

they would mature into the drones found in most every flock.

There are, no doubt, many poultrymen who hold the opinion that good chickens can be raised successfully only in small flocks. This is doubtless correct when show stock is considered, but I believe the layers, broilers and roasters reared with the colony stoves will prove as profitable, and present as good an appearance, as those brooded in the regulation flocks of fifty. It is my opinion that too much attention has, in the past, been paid to developing striking and unique styles of brooders that depend upon and catch the poultryman's eye thru such features, which are generally nothing but talking points that make very readable advertising. All the practical chicken man needs is a simple device that will, with the least care and expense of fuel, keep his chicks comfortably warm, dry and abundantly supplied with pure air. The hard coal stove has been the standard for keeping humans surrounded by the proper temperature and

why it will not do the same for baby chicks I do not know. To be successful with your broods, obtain a good simple brooder and then spend the bulk of your time and money in providing them with pure wholesome food and cheerful surroundings. I know a man, who, years ago, raised each year very fine fowls in flocks of about 250 in a simple shed building heated by an ordinary kerosene wick heater. This sat in the middle of the floor, which was covered with sand upon which the chicks slept and scratched.

Since we have learned to properly handle chicks about the colony stove brooders, we are having very good success in raising our flocks of layers and market fowls. Our best record was made two years ago when we brought thru 376 chicks to weaning age out of a flock of 400. Last year, which was one of the hardest seasons for chicks we have ever experienced, we raised an average of 86% of all chicks brooded with this style of equipment.

Rearing Chickens with Hen or Brooder

Care and Management—Good Home-Made Brooder—Brood Coop and Colony Coop—Some Good Rations. *By Prince T. Woods, M. D.*

HOW TO REAR THE CHICKS RIGHT is one of the most important things to learn in the poultry business. No matter how well or carefully the breeding stock may be bred and managed, if the chicks are not properly hatched and grown they will not be first-class specimens. Poor management during the growing period will make a cull out of any chicken. There is much in line breeding, much in healthy breeding stock, but though you may have both of these important things in the fowls that produce the eggs, you will not get a good or satisfactory chicken unless you hatch it right and grow it right.

One reason experienced fanciers are so successful in growing splendid exhibition specimens, is because they hatch the chickens right and grow them right, and take particular pains to see that they get good wholesome food. Because of ignorance, carelessness, and bad management, we have seen worthless culls grown from precisely the same quality eggs that produced winners in the hands of other growers. There is abundant opportunity to prove this statement everywhere and during every season. You have only to use your eyes and look about you.

Chick rearing is comparatively simple and easy, if you know how, and because of this a good many growers—not all of them beginners either, for beginners are usually painstaking at first—get careless and slipshod in their methods. Successful chick rearing calls for the use of good sense, some observation and a lot of attention to little details. A well-hatched chick, out of a well incubated egg from healthy parent stock, is generally born to live. It is surprising what an amount of abuse they do stand and still make a good life of it.

Among the prime essentials for successful chick rearing are comfort for the chicks and wholesome food. If the chicks are kept comfortable they will be happy and thrive. They will not be comfortable if allowed to get chilled, if kept too warm and deprived of fresh air, if crowded, if allowed to become lousy, or if kept in unclean coops. They will not be comfortable and will not thrive if they are given unwholesome food. It is a lamentable fact that a large amount of poor grain is ground and sold as chick food, that the same buyer would refuse if he saw the whole grain. Then, too, cracked grains spoil quickly under some conditions, and a great deal of chick food is stale and partly spoiled before it reaches the buyer. Some is made from new corn or poor corn. New corn is much more liable to spoil than well cured, well aged corn. Only sound old corn should be used in chick foods. Spoiled or diseased corn is very dangerous to feed to chicks or fowls, and spoiled corn kills its millions of chicks every year. Manufacturers of

chick foods should be particularly careful to see that only good, sweet, sound old grain goes into the makeup of their foods. Pigeon growers learned a long time ago that spoiled or badly damaged grain is poisonous and will kill the squabs. Chicken growers are only just beginning to learn the importance of sound feeding grains. There are several good dependable, wholesome commercial chick foods, but any of them can spoil after they leave the manufacturer if not properly kept and handled or if kept too long. We hear a lot about "white diarrhoea" in chicks, but if our Experiment Stations would work harder to demonstrate the need and value of sound feeding grains, and to warn growers against spoiled and misbranded feeds, they would save more chickens and do more good for the chicken business than they are now accomplishing by so much scare talk about "white diarrhoea." In our experience we find that real "white diarrhoea" is a comparatively rare disease.

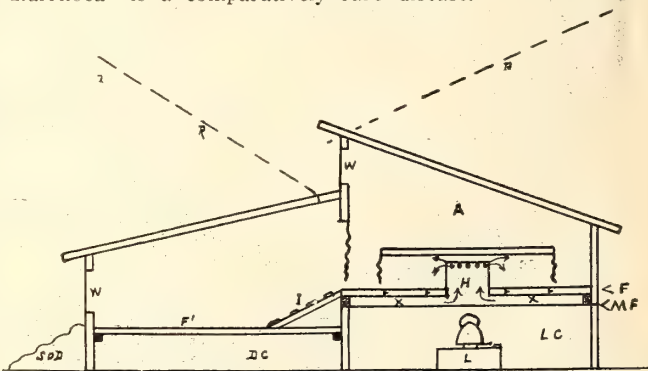

Fig. 1. Plan of a good home-made brooder of a type that has been in successful use for more than 20 years. A brooder that supplies fresh air and is easy and safe to use. "A" is the hover apartment, which is about 3x3 ft. "B" is the exercise room which is on a little lower level and is also about 3x3 ft. The over-all measurements of this brooder are: 6 ft. long by 3 ft. wide; 1 ft. 9 in. high in rear; 2 ft. 11 in. high at peak; 2 ft. 2 in. at rear of front roof; 1 ft. 6 in. high in front. A sod is used to make the outdoor incline for chicks to run in and out on. "L" is the lamp. "LC" is lamp chamber, the ceiling of which is a solid sheet of galvanized iron, see "MP". This lamp chamber is boxed in on all sides, making it a little less than 3x3 ft., so that all fumes are kept out of brooder apartments. "F" is matched board floor of hover apartment. "F'" is board floor of exercise room. "I" is a solid board incline, hinged at top, and fitted with cleats, for runway for chicks. It can be raised and hooked up to shut chicks in hover apartment at night. "H" is the heat flue, made from a large tomato can, open at lower end and with holes all around sides near the closed end at top. A hover board fitted with felt flaps, which may be either a circular or square hover, about 2 ft. across, is made to rest on top of heat flue or may be put on legs and placed so it will not quite touch flue. It should be about 5 in. above brooder floor. "XX" is a hot air space about 1½ in. high between wood floor "F" and the galvanized iron sheet "MP". Arrows indicate the direction taken by heated air which warms the hover. The air is drawn from outside brooder as shown in "Fig. 2." "W W" are glass windows. Dotted lines at "R R" show how front and back roof are raised. Roofs are fitted with hooks and strong hinges and are covered with waterproof roofing. The lamp is a common galvanized lamp with a "zenith" (or chimneyless) burner. A felt tab curtain is used between apartments as shown. Anyone handy with tools can make one of these brooders at a cost not to exceed \$5 for material. —P. T. W. (See "Rearing Chicks With Hen or Brooder.")

ROYAL—REDS

FIRST, SECOND, THIRD AND FOURTH PRIZE SINGLE COMB RHODE ISLAND RED PULLETS AT
COLISEUM SHOW CHICAGO DECEMBER 1913
F. E. HARRISON

BRED AND OWNED BY
MENOMINEE MICH.

Mr. Harrison has won 1st pullet at the Coliseum Chicago show each year for the past four years. The above cut represents 1st, 2d, 3d and 4th pullet in the strong class of the Chicago Coliseum, December, 1913-14. Mr. Harrison's winning of twenty-one 1st prizes at Chicago and best display four times in succession is a world's record and certainly bespeaks of the great quality in his Royal Red S. C. Rhode Island Reds.
—F. E. Harrison, Box 30, Menominee, Michigan.

We use incubators and hens for hatching. We also buy hatching eggs and day-old chicks, and we send eggs to a hatchery to be incubated and the chicks shipped back to us. In another article we have made suggestions concerning operation of incubators. An experienced incubator operator can turn out chicks from good eggs that appear in every way to be equal to hen-hatched chicks. You can get poor incubation and poor hatches with both hens and incubators. Buying hatching eggs is quite satisfactory if you deal with a reliable breeder and remember that you are buying his chances in those eggs and that hatching is always largely a matter of chance. For a good many years we have been buying day-old chicks, or buying chicks from our own eggs, from a hatchery that is seven hours away by express. For the past five seasons we have bought from several hundred to several thousand day-old chicks each season and we like the results so well that we expect to keep on doing it. We bought day-old chicks 21 years ago from an incubator

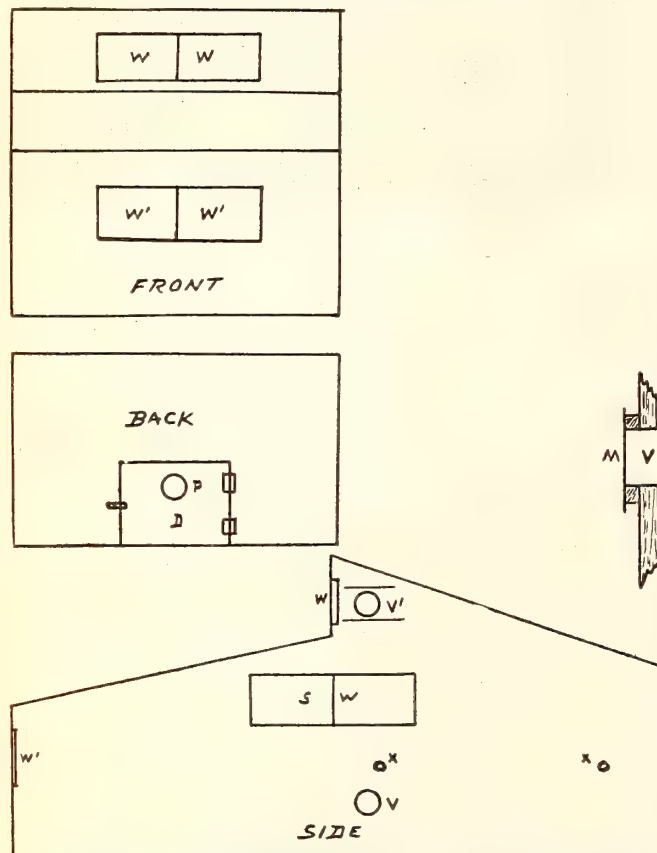

Fig. 2. Diagrams showing special detail of the home-made brooder shown in "Fig. 1." Side view shows position of side window "S W" made of two oblong pieces of glass, each about 6x9 in. These are fitted in a slide on outside of brooder so that the two pieces can be drawn apart to give an opening of desired size for fresh air. On inside of brooder tack common wire fly netting over opening. "V" is a 3 in. ventilating hole which should have a small galvanized iron slide to cover it. "X X" between galvanized iron sheet and wood floor and are to supply fresh air to heating part of brooder. The holes are in one side of brooder only. "W" is upper window made same as side window and with a screen back of it. "W'" is lower front window of two 6x9 in. pieces of glass fitted to slide in cleats, has no wire back of it and is used also as a chick door. "V" is a 3 in. vent for lamp chamber. Detail of this vent is shown above, "V" the 3 in. hole in brooder side. "M" a piece of metal on cleats covering hole inside lamp chamber, but open at sides between the cleats. It serves to break direct drafts. In Front view, position of windows are shown. In Back view the lamp door "D" is shown. "P" is a peep hole covered with mica and used for viewing the lamp flame.—P. T. W. (See "Rearing Chicks With Hen or Brooder.")

operator who lived 48 hours' express journey away from us and we had fine luck with them, and almost every year since then, that we have reared chickens, we have bought some chicks day-old from various distances from a few hours to three days' journey from us.

We have heard a lot of nonsense talked about the cruelty of shipping day-old chicks. We have never seen any cruelty, unless the fact that once in a great while the express company smothered a few chicks can be considered cruelty. Well packed day-old chicks ride very comfortably and they are much better off for being kept in the dark box, without food

for 48 to 72 hours. It seems to help rather than hurt them. Frequently day-old chicks shipped away by express will thrive better than those from the same lot reared on the home plant; we have noted this on several occasions. Certainly no cruelty

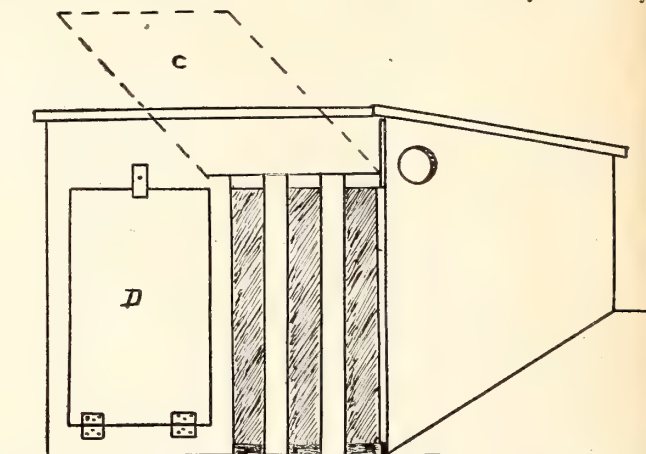

Fig. 3. A convenient brood coop for hen and chicks. If an elbow of two 14 in. strips of board 4 in. high is used in one corner on floor to make a nest, the coop can be used for sitters. Floor is of wood. Roof is a hinged lid of wood covered with waterproof roofing. Dimensions are 2½x2½ ft. About 2½ ft. high in front and 20 in. high in rear. The slats in front are 3 in. apart. The ventilating hole in side is 3 in. in diameter and is covered with fine wire netting. "D" is a solid board door, hinged at the bottom and held in place by a button on top. It will be found much more convenient to have this door so hinged at bottom as it gives free access to chicks and forms a runway when hen and chicks are freed. "C" is a cotton screen on a wood frame and made to hinge at top and swing up, held in place by string or chain. In ordinary use, hen is confined and chicks allowed to run.—P. T. W. (See "Rearing Chicks With Hen or Brooder.")

here. But we can appreciate that there are cases where it is cruel to allow some people to have adult fowls, day-old chicks, or even hatching eggs; for they manage, any or all, so badly that the poor things don't have a chance; but we do not see what is to be done in such cases. About all that can be done is to try to educate people to take better care of eggs, chicks and fowls.

Start with sound, healthy, vigorous breeding stock, or buy at a fair valuation good hatching eggs or day-old chicks and insist on having them out of healthy well-bred stock. The rest is "up to you," whether you get good results or poor results depends largely upon the amount of thought and intelligent effort you put into the work. It will not do to give one flock or brood good care and cleanly management and then let the rest "slide." Each and every flock or brood must have good care and attention to all necessary details. Whatever you neglect, you pay for in the end. Many a beginner, while his interest is hot, works well and does well

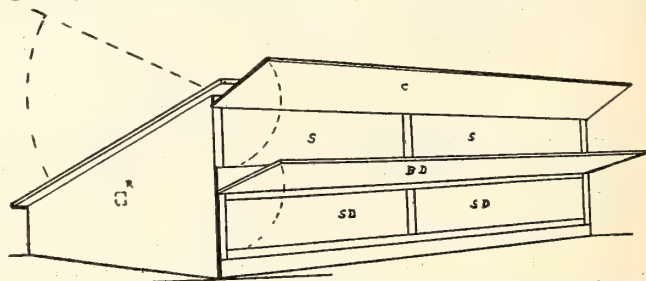

Fig. 4. An All-Season Colony Coop. Hens can be set in it and chicks kept in it until full grown. A fine practical coop modified from 100 similar coops used by D. W. Young. It is about 3 ft. deep by 6 ft. long. A little over 3 ft. high in front (the thickness of roof) and about 2½ ft. high in rear. Roof is of matched boards covered with waterproof roofing and hinged at top to open up as shown by dotted lines. "R" shows the position of 2x2 in. single roost which is placed in middle of coop about 14 in. above floor. It rests in cleats and is not used until birds are of roosting age. "S S" is open front covered with fine wire netting. "C" is a cotton screen on wood frame, hinged at top and made to swing up as shown and fastened at any height desired by a chain in middle. "B D" is a matched board door, hinged at top and made to swing up as shown; also fastened by chain. "S D" is a screen door of fine screen a trifle narrower than the board door and also hinged at top to swing up and out in same manner. Also fastened by chain. All doors are about 14 in. high by length of coop. Board door and cotton screen can be made to serve like an awning to protect inside of coop. When bottom screen door is opened it gives an opening nearly 14 in. high by entire width of coop so that birds can run in and out without injury from crowding. If desired to keep feathers and tails in best condition, one roost is enough. If used for growing market chicks, two roosts can be planned for. It is a good coop and not expensive to build.—P. T. W. (See "Rearing Chicks With Hen or Brooder.")

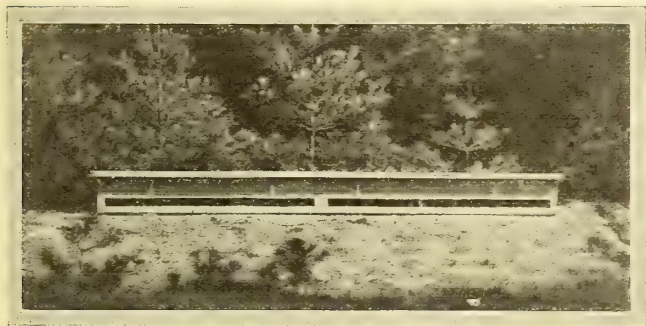

while things are new and clean.' He thinks he has "learned the game" and that it is "easy" and, of his "know it all" foolishness, carelessness is born and he gets a discouraging bump and costly experience. You can spend a lifetime with poultry and still find worth-while things to learn every day—you will also think you have learned some things only to find that you have to unlearn them later. When you cannot learn something new and worth while every day, then you are either dead or losing your mental grip.

HATCHING WITH HENS.

While a good incubator properly operated will turn out good chicks, no one has yet improved upon a good hen for hatching chickens. Some hens incubate poorly and are poor mothers; some incubate well but do not rear chicks well. When you get a hen that proves a good all around mother, she is well worth keeping for a number of years. We have used them when five, six and eight years old, and they knew their business and made a success of it.

Although it is wise for very early hatches, to set hens indoors, we much prefer outdoor hatching as soon as the below zero weather is over with. It does not seem to matter much whether you set a hen in the attic, a shed, the barn loft or in a straw stack—a good mother generally gets good results. Mr. Bell will testify that, when he was on our place last Spring, he saw 3 chicks that came from 30 eggs, hatched under two hens in our barn loft during April. We generally use a long bank of nests for outdoor hatching, ten nests built in a row and closed by wire net doors; bottoms of nests made of one inch mesh wire netting and bedded with pine needles. (See illustration.)

However, a brood coop, like Fig. 3, with a detachable nest

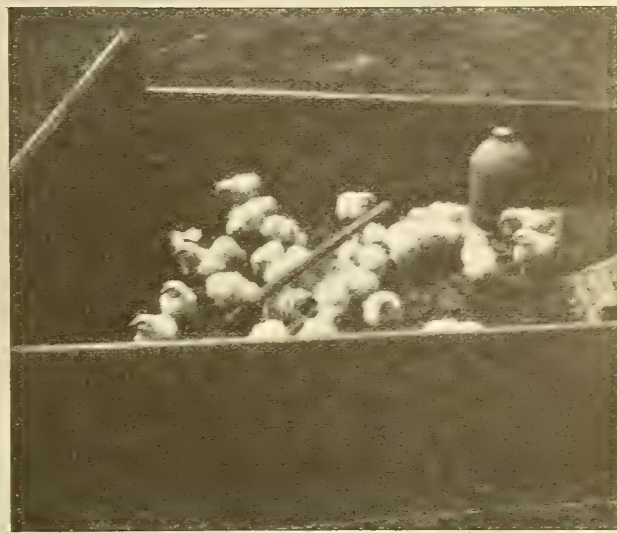

A bank of ten nests as used for setting hens out of doors by Dr. Woods. (See "Rearing Chicks With Hen or Brooder.")

built in one corner; or a colony coop, like Fig. 4, with two or more nests, makes a good place to set a hen or hens. We usually set two, four, eight or ten hens at the same time. This permits testing out the eggs and keeping only fertile eggs under the sitters—also it permits doubling up the broods of chicks and resetting some hens. We also, frequently, incubate eggs in an incubator for about two weeks (sometimes several lots, all dated as set) and then give the fertile ones to hens to hatch. This plan works well, especially early in season when broodies are scarce.

Always have the nest clean. If not made on the ground, put a little earth in the bottom of nest. On this use pine needles, soft hay, chaff or shavings. Don't dish the nest too much or make it too soft—if you do the hen will break more eggs. If eggs get broken, clean up others with warm water and put in new nesting material. Tobacco stems and chaff make good nests. Don't use straw, as it is liable to harbor mites. Dust the broody hen well with good fresh Persian insect powder the first night you find her on the nest, and use a tiny bit of blue mercurial ointment on the skin above and below her vent. Don't move her until you are sure she intends to stick to the nest. Then move her at night and let her have china nest eggs to sit on for a few days, until you know she will attend to business. Dust her with insect powder once each week. Just after the chicks are hatched and dry, put a very little of the blue ointment above and below her vent, under each wing close to body and on back of her head near base of comb. Use very little of the ointment as it is poisonous. Provide a good long run for the

setter to use when she comes off the nest, the further she runs and the more she jumps about, the better will she keep in condition. Let her off the nest at a regular hour once

Board shelter as used for first run of either hen or brooder chicks.—P. T. W. (See "Rearing Chicks With Hen or Brooder.")

each day. Provide her with corn, wheat, shells, grit and charcoal, as well as clean drinking water. See that there is a good dusting place where she can use it. Do not let her stay off the nest too long, but try to have her get exercise enough to have a good full evacuation of the bowels and be sure that she gets enough to eat. At hatching time, don't disturb her, but see that chicks do not fall out of nest and get chilled.

REARING WITH HENS.

When rearing with hens we like to keep the hen confined to the coop and permit the chicks to run free. Usually they get out on the ground as soon as they are ready to go. We do not feed them until they are hungry enough to cry for food. They get their first food and drink when from 36 to 72 hours old. This is usually rolled oats and bread or cracker crumbs rubbed up crumbly with hard boiled egg. They get this once a day for ten days. We feed them three times a day, the other feedings being home-ground chick food. The chick food is fed, after the first meal, almost just out of reach of the hen so she cannot waste it. She gets some whole corn and whole wheat for herself. Food is fed on a board or on a metal dish. We don't like to throw the food on the ground. For greens they get short sprouted oats until there is grass. The coops are kept clean, usually littered with cut

An early spring view of brooders and brood coops on range at "The Anchorage Farm."—P. T. W. (See "Rearing Chicks With Hen or Brooder.")

clover, mow chaff or alfalfa. The chicks run to the weather but have a board run at first near coop, with a shelter to keep out heavy rains.

REARING WITH BROODERS.

We like an outdoor brooder similar in pattern to that shown in the plan given in Fig. 1 and Fig. 2. From the dimensions given under the illustration any good "wood butcher" ought to be able to construct a good brooder. You can buy similar brooders ready-made, but they will cost you close to three times the price of the home-made machine. We start up the brooder before the chicks are expected, to be sure that it is properly warmed up and running right. We try to have it hold temperature about 95 to 100 degrees under the hover. After chicks are in, we forget about the thermometer and run it according to the comfort of the chicks—keep it warm enough so that they warm up quickly and don't hang around under the hover. At night it ought to be warm enough for them to sit all around edge of hover with heads peeping out from under the felts.

When we start the brooder we sand the floor of the hover apartment and put in a litter of cut clover, cut alfalfa or mow chaff. The brooder is clean at the start and kept clean. A

Metal brood coop with pine bough for shade. A Dark Cornish mother with a brood of 12 White Rock chicks at "The Anchorage Farm."—P. T. W. (See "Rearing Chicks With Hen or Brooder.")

little sand and litter is put on floor of exercise room. A strip of clean felt is wrapped around the heat flue below the holes, to protect the chicks from the hot metal. We use a long shallow metal feeding dish and in it put the same food we use for hen chicks. We also put in a galvanized drinking fountain with clean water. A felt tab at front of hover is pinned up to make it easy to get in and out. The inclined runway "I" is hooked up at first to keep chicks shut in hover apartment. We put the chicks in brooder in the afternoon about an hour before dark. This gives them just time to get their first meal and go to bed. We tuck them all under the hover once or twice and see that all are under after dark and the felt tab lowered. The next day they get three feedings and are tucked under the hover several times to get them used to it. If the day is sunny we open up the brooder and take out the hover for a few minutes' airing at noon feeding. If the chicks learn quickly they are usually ready to have a little run in the exercise room the following day. We don't rush them. Some broods learn more quickly than others and you must be guided by your brood. Keep them comfortable and happy. The first few times the chicks are only allowed in the exercise room for a few minutes and are then gently shoed up the incline into the hover apartment. When working with the chicks, until they get used to going in and out,

we keep a felt tab on partition between apartments and on hover pinned up to facilitate going in and out. Be patient with the chicks and don't be rough. If they don't take to the food quickly, tap the dish with your finger and hold up bits of food for them. They will soon get busy. We make a short board run outside the brooder and a sod incline for chicks to run on, and repeat the same lesson out of doors that we worked in the exercise room. They learn quickly if they are good chicks and if the operator has sense and patience.

We use these brooders out of doors from late February on and have fine luck with the chicks. Always select a fairly sheltered location, if possible. See that the brooder is level and bank it a little on all sides with sand or earth to keep the wind from blowing under it. For cold weather operation the "zenith" burner should be large size, having an inch wick. In warm weather a smaller size burner can be used. Feed the chicks three times daily just as you do the hen brooder flocks and give them greens.

CHICK RATIONS.

For a home-made chick food we like the following ground in a power mill or in an ordinary \$5 hand mill:

Sound old corn, yellow or white, flint preferred.....	10 lbs.
Sound Duram or macaroni wheat.....	10 lbs.
Heavy clipped white oats, hulls and all.....	5 lbs.
Clean sound heavy barley.....	5 lbs.

Grind all together into a coarse meal and add 5 pounds rolled oats and a little fine granulated charcoal and fine shells.

For a mash to be kept before the chicks, sift out the fine meal from above and mix with an equal part by measure of bran, and when chicks are a week old add about 5% of either fine fresh fish scraps or best quality fine beef scraps.

As stated, during the first ten days, cracker and bread crumbs rubbed up with hard boiled egg are fed once daily.

Raw potatoes, cut in chunks, and sprouted oats, about half an inch sprout, fed rootlets and all in a pan for chicks to scratch over. Give fresh daily. Remove all stale potatoes or oats.

After ten days old gradually work on to coarser ground chick food. Keep mash before them. Give scalded fresh fish when available. Increase size of outdoor run and give grass run if possible. Feed three times a day and feed well, keep them busy; keep coops and brooders clean; change litter often.

When three weeks to a month old the chicks will take practically the same ration as layers. Wean the chicks when well feathered, usually at from seven to eight weeks. From now on they will do best in colony coops on good grass range and should get three full feedings a day.

If kept clean and comfortable and well fed on wholesome food, they are certain to do well. Watch your chicks and learn to know their wants and what their calls mean. You will find that they have an easily understood language and that it pays you to be come familiar with it.

Mrs. Ruth E. Brown, of Baxter, Kans., is sure a woman of keen foresight. Last summer her grain fields were infested with great armies of grasshoppers that threatened to destroy the grain crop. Mrs. Brown is a breeder of White Orpingtons and she needed the grain for winter feed. She had a hunch. With the assistance of the hired help on the farm, she inaugurated a grasshopper drive and secured five bushels of the 'hoppers. In a week she had 100 bushels of fine, grain-fed grasshoppers put away in her barn loft to dry, to be fed to her White Orpingtons during the coming winter.

* * *

Rudolph Heim, president of the Buchanan Poultry Association, New Jersey, has found a use for sparrows. He chatches them in large cages, baited with grain, getting as high as twenty and thirty daily. After killing them he pulls out the large wing and tail feathers and then runs them thru a sausage grinding machine, feathers and all, mixing in some bran to absorb the blood. This combination of meat, blood, feathers and bran he feeds to his chickens and they greatly relish the mixture. Next!

Barred Plym. Rocks and Their Breeding

CHAPTER II. The Different Types of Barring in the Barred Plymouth Rocks, the Variations of the Contrasting Colors and Their Values in the Breeding Yard.

By C. H. Latham, Lancaster, Mass.

THE TWO POTENT COLORS of the plumage of the Barred Plymouth Rocks are black and white. Not 100% black in the dark bars, or 100% of white in the light bars, but a mixture of the two colors in each bar. That there is some other debasing color that has always been making trouble in perfecting our plumage color, there is no shadow of doubt, but to give this color its real name is a hard question to answer. It shows mostly in the way it destroys the purity of the two potent colors, causing many birds to have a decided brownish tinge to the plumage

soon after the feathers are grown, and this increases as the feathers get old and worn. It shows in a greater degree in birds having weak contrasting colors. The more pure and intense we get the two contrasting colors the less we see of the debasing color, probably from the fact that in these more carefully bred birds, there is a smaller per cent of the debasing color.

In the earlier Plymouth Rocks the bars were quite wide, and of weak contrasting colors, and the per cent of admixture of white in the dark bars, and black in the light bars, was much greater than in the birds of a later period.

These weak contrasting colors blended and softened one into the other, causing the birds to have a blueish tinge to the color of the plumage, as they were really two shades of practically the same color. They were spoken of as "Blue Barred" Plymouth Rocks, and even today we see birds of this type. This type of color faded very rapidly, and the birds in the late Summer months became very brown and dull looking. In many flocks of recent years, much more attention has been given to perfecting the type of barring, and a great improvement in color has been made. We still see in some specimens, and in some cases in whole flocks, these weak contrasting colors, and the dull brownish tinge after the feathers become old is very noticeable. Perhaps it is safe to say that over 50% of the Barred Plymouth Rocks of today are weak in this respect.

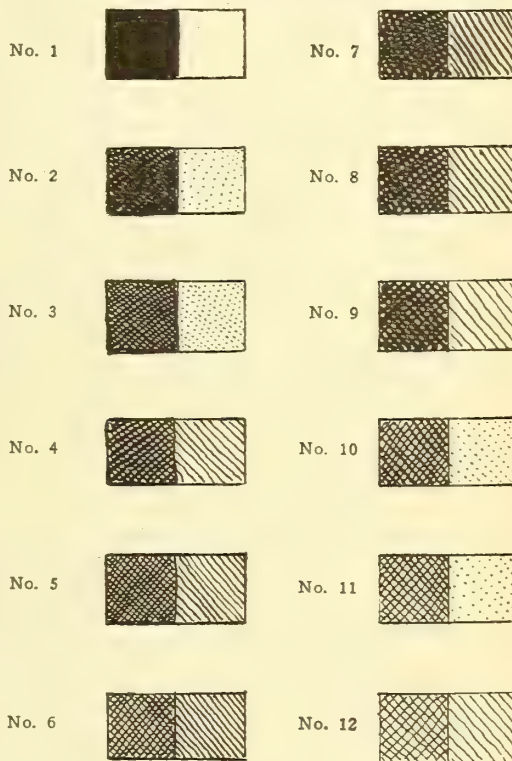

In breeding Barred Plymouth Rocks for present day requirements, a great deal of attention should be paid to the quality of the contrasting colors, and the value of the colors determined by the *different widths of the bars*, and how this affects the progeny of the mating. On this, in a large measure, hinges success or failure in breeding.

The Standard requirements of barring—and barring properly bred makes up the color of the plumage—are that the dark and light bars shall be of correspondingly equal width, and until such changes are made in the Standard to better the color description, we must keep this in view. Also the Standard requires that the two sexes shall be alike in color in exhibition specimens.

In the study of mating for color, let us take some things into very careful consideration. Nature demands that the male bird shall be of lighter color, or having a lighter appearance in color than his dam or sisters. This owing to the light bars of his plumage being wider than the dark bars, if his dam is a bird having the dark and light bars of equal width. If the male has bars of equal width, his dam will be found to have the dark bars of more width than her light bars. For this reason the "double mating" method of breeding is required in order to produce birds of both sexes that can be alike in color. That is, a special mating must be made to produce males of exhibition color, and another special mating made to produce females of exhibition color. A male bird may be identical in color as his dam, that is, the dark bars may be of exactly the same shade of color, the same value, and the same in the light bars, but owing to the difference in the widths of barring in the two birds, he will have a lighter

appearance. A male bird having weak contrasting colors, even tho the dark and light bars are of equal width, or having the darker bars the wider of the two, he is not a valuable bird for a breeder. See chart of color contrasts for examples of weak contrasts numbers 3-12.

Breeding fine colored Barred Plymouth Rocks is largely a matter of mixing the two colors black and white, and the combination of the two colors as regards the different widths of the contrasting bars. To illustrate: the attention of the reader is called to the chart of color contrasts which gives different shades of combinations of black and white in contrasts. No. 1 being the extreme, a contrast of positive black with pure white. No. 2 being a very slight departure from

pure black and white, by having a very small percent of each color in its contrasting color, so that the dark color stops short of being a positive black, and the light color a very delicate gray, very nearly approaching pure white. As the writer interprets the meaning of the Standard description, this is the ideal color of the plumage of the Barred Plymouth Rocks. Other numbers on the chart showing weaker contrasts, caused by a larger percent of opposite color mixture in one or both of the contrasting colors. A bird with plumage closely like No. 2 will be a bright snappy clean barred bird, that with other things being of equal merit, would be most attractive, both when in new feather, and during the whole season till new feathers appear in the annual moult. The colors are strong, pure and intense, and do not fade like the weaker contrasting colors.

The weaker the contrasting colors, the less valuable as a rule is the bird for a breeder. Weak contrasting colors combined with a wide, dark bar seem to be the most undesirable birds to use in the breeding yard, and should never be put together in a mating. In most any flock we will find specimens of these different types as represented on the chart. Much of it is owing to poor selection of breeding birds, and some of it is unavoidable. In years to come when more attention is paid to the study of color, a much more

uniform type of color will prevail thruout the country. A good deal of the differences in types of colors and barring is owing to the different ways in which many of us look at it, we do not interpret the Standard alike. If a bird is too dark in color, it is not because the dark bar is too near a positive black, but because the dark bar is too wide for its contrasting light bar, or contrasts with a light bar that is too dull from having too great an admixture of black in its make-up. And if a bird is too light in color it is apt to be just the opposite in combinations. If we should follow a set rule in breeding, using only those birds that show very high merit, according to Standard descriptions, we would confine ourselves to a very restricted path, and would discard many birds as useless that were really strong breeders. The breeding of fine poultry is an intricate work, requiring most careful study and painstaking efforts, that are crowned with some successes and fraught with many failures. But failures are only stepping stones to success, and the breeder must get these failures under his feet and keep reaching for higher things.

One thing the breeder should bear in mind, Nature is very coy in passing out phenomenal birds, they usually come in "clusters of one," and no matter how choice a mating may be, there will be a greater or less per cent of birds that will be ordinary specimens compared to their parents, and then there will be some that should be considered as culls. We will suppose that a breeder has a pair of very choice birds mated to produce exhibition females, a "pullet-mating" so-called. Among the progeny of this mating he may have a per cent of birds that are equally as good as the parent birds, and possibly a bird or two that are still better. The larger part of the progeny is likely to be birds that in appearances fall a good deal short of being birds of equal merit of their parents, still many of them may be excellent breeding birds if properly mated. The inferior in appearances, they are of the very same blood and breeding as the best specimens of the progeny, as closely so as anything we can get in breeding. When we stop to think that these brothers and sisters of the progeny of a pair of birds have four grandparents, eight great-grandparents, and sixteen great-great-grandparents, and so on, we can see that the admixture of the characteristics of many sires and dams is in their make-up, and the potent quality of some sire or dam shows itself in some offspring more than it does in some others. If we had the characteristics of only the one sire and dam to work with, it might be possible to breed a flock of birds as alike as peas in a pod. Among the progeny of this mating there may be some specimens quite dark in color, in the females showing a dark bar a good deal wider than the light bar, and sometimes closely approaching a cockerel-bred female in color. Tho far from an exhibition bird in color, she is a valuable bird for a breeder. This holds good in specimens that come quite light in color, having a light bar wider than the dark bar, but having a clean intense color in the dark bars. With these females having the wide dark bars, mate to them a male having narrow dark bars, that contrast with light bars of a good deal more width, a bird that the light portion of his color predominates. His barring should be as straight across the feather as possible, clean cut, that is with each color sharply defined. Such birds, if well bred, have good, bright wing and tail barring, often much needed in breeding to a strong colored female.

If the females are really quite dark in color, a male that even shows the dark bars a bit weak in color, if they are sharply defined and are quite narrow, will give fine results. This is an extreme mating, but one that many times produces very fine birds. We will take the other extreme, the light clean-cut, sharply defined barring of the lighter colored females, that have their light bars quite a good deal wider than their dark bars. These birds usually have good barring in wings and tails, and as a rule they have well-defined underbarring. Select for a mate a male that is somewhat darker than is usually used for a breeder of exhibition females, not of course as dark as an exhibition male, but approaching the other extreme of color from what the female have. This of course is another extreme mating, but one that should give results of practically the same as the mating of the darker females mated with the lighter male. In choosing the darker male, use great care in select-

ing one that is darker in color, from having his dark bars clean and intense in color, contrasting with a clean delicate gray light bar, with the dark and light bars closely approaching equal widths. This same method of course holds good in using the light or dark males of a mating, they are valuable breeders if properly mated. A good deal of study should be put into what constitutes a dark or a light bird. A dark bird of either sex that is dark because it has a clear intense dark bar, this bar being as wide or wider than its contrasting light bar, showing clear bright contrasts, having the light bar clean and closely approaching white in color, is a bird that will produce fine stock if correctly mated. But if he is dark from having the light bars a dull gray showing weak contrasts of color, he is not of much value as a breeder. And in the light birds of either sex, if it is light in color because the dark bar is weak, and this bar is quite wide, even of same width as the light bar, the light bar is liable to be a dull gray, and it is a bird of very little value as a breeder of high-class birds.

There can be made a number of different matings between these two extreme types till they meet on the middle ground and one has an ideal colored exhibition female mated to a medium colored pullet-bred male such as is usually considered a Standard type of pullet-bred male. Some will say why go to these extremes in mating? Why not follow a middle course? Somehow Nature does not seem to produce everything in the way we think she should. It is a supreme effort to now and then give us a phenomenal bird, one far in advance of the years' production. And often these phenomenal birds fall short by a long way in producing birds of high merit, they may produce only medium quality. And the ideal bird for a mating, such as we all have been looking for and hope to see in our flock, never shows up, we have to content ourselves with some bird that in many ways falls short of our ideal. A male bird that is of only good average quality, pretty good in all respects, as regards shape, color, and barring, will only produce a flock of birds of good average quality, he will not produce birds of a high type. But some bird that shows great merit in some respects, having in a measure some of the good things we have been hoping to have, has in his make-up fine breeding qualities. But almost invariably he will possess some glaring defect, of such a nature that one fears to use him as a breeder. But here is where Nature has marked high, has given us some of the qualities desired, tho she has thrown in some base metal along with the pure gold. It is up to the breeder to refine out that base metal and hold fast to the gold.

Many breeding males of this kind would be discarded as disqualified if the Standard were applied to them, because of one or more of these glaring defects.

A disqualified bird is supposed to be worthless, a cull, but *any bird that can produce high-class birds should not be considered a disqualified bird.*

The writer is strongly opposed to any defect being considered a disqualification, unless it amounts to an actual deformity. Because a bird has a bit of down between the toes, a stub feather on his shank, or a fleck of white in his lobes, little spike in his comb that does not stand plumb and in line with the others, or some other thing of this nature, he is thrown out as valueless. All wrong, and silly nonsense! We should consider our breeding birds as so many tools to work with, and *it is the cutting edge of a tool that counts.*

Edward Brown (England) says: "The use of houses with fronts made of wire netting, thus affording sufficient ventilation, is to be recommended, by reason of better laying, of greater vigor, of enhanced fertility and hatchability of the eggs laid, and of stronger chickens from these eggs."

* * *

If you want to have eggs next October and November when the prices are high, be sure to begin hatching in February and March. It takes early hatched pullets to yield Fall eggs worth five cents each.

* * *

The value of the poultry and eggs shipped into the Boston market in one year is estimated at \$12,216,556.20, and it is estimated that the value of poultry products shipped into the New York, Chicago, Boston and Philadelphia markets annually is upward of \$60,000,000.

Comment on Reports of A.P.A. Convention

The Poultry Business Is More Free from Dishonest Dealing and Misleading Advertising than Many Other Lines of Business. The Key to Bettering the Situation Is Not That of Censoring Advertising and Eliminating Competitors, but That of Educating the Public to Know and Appreciate Values and Demonstrating to Advertisers that Truth in Advertising is the Best Policy. *By Helen T. Woods*

OW THAT THE PROCEEDINGS of the fortieth annual convention of the American Poultry Association at San Francisco have reached the reading public through reports given in the various poultry magazines, those of us who were unable to attend, may well ask if at least a part of the matters considered and resolutions adopted at this convention, were intended as "jokes" or solemn propositions.

That this Association of six or more thousand members, with an object of furthering the interests of the poultry industry, should appropriate \$500 and appoint a committee for the purpose of investigating "hucksters" and "huckstering" among poultrymen in these United States is nothing short of ridiculous. I should like to ask the gentlemen who fathered this measure, how, and for what purpose is such work to be attempted? In a work of such magnitude, involving a warlike attack on business concerns representing hundreds of thousands of dollars in capital, located thruout the whole country, of what avail is the appropriation of the paltry sum of \$500? Why not donate it to the private expense account of the needy committee or give it to the heathen? The manufacturers of high-powered motor cars thruout the country might as well attempt to put the little "three-fifty" roadster out of business by means of automobile association legislation.

In common usage of the term, the "huckster" is a man who raises or deals in several varieties and who buys stock to sell again, generally buying cheap and selling at low prices. There are fanciers who have made use of huckster methods to help them to their present day success. It is wise to speak well of the bridge that carries one safely over the stream.

Huckstering can be and generally is a legitimate business. Undoubtedly there are frauds here, as there are in all branches of the business. But is it not a fact that customers really complain less about dealings with well-known huckster plants than they do of dealings with fanciers?

In appointing a committee to undertake a work which calls for generous breadth of reasoning, free from bias, it is unfortunate, that this huckstering investigation committee should have been made up of three members who have publicly and repeatedly expressed themselves so unqualifiedly against hucksters and huckstering.

How does the American Poultry Association propose to put a stop to a legitimate business? For the selling of fowls or day-old chicks of the various breeds, from big hatcheries or by hucksters thruout the country, cannot be classed as other than legitimate. That chicks so sold do not develop into Madison Square Garden winners, or because, in some instances, they show the result of the crossing of strains back of them, cannot make their sale as belonging to certain varieties a dishonest transaction.

Frank L. Platt, in December *Reliable Poultry Journal*, in an article, "Take No Chance on the 'Riff-Raff' Kind of Day-old Chicks," quotes as follows from an interview with "a neighbor":

"The business of selling day-old chicks has grown beyond the fondest expectations of its early promoters. One hatchery alone last year shipped 700,000 chicks, so I am reliably informed. Pray what were they? That is the question—and it is a question of vital importance to all promoters of the Standardbred industry, to all students and advocates of true poultry culture.

"But few of these hatcheries maintain a breeding establishment adequate to their needs. The employees or manag-

ers of some of them that I have knowledge of, drive over the countryside and buy the eggs at 45 to 50 cents per dozen. A farmer's flock of Plymouth Rocks—Buff Leghorns, with a Barred cockerel behind the barn—is good enough to shell out eggs for certain of these hatcheries. Meanwhile a hundred good breeders right here in the state of Ohio—and in every state—are not making money enough out of their established, dependable stocks to buy their wives new hats."

It would appear that here is a matter which, if it requires investigation on the part of the American Poultry Association, or the poultry journals, cannot begin with the sale of chicks alone or the big hatcheries. It is as much a crime to steal one dollar as one thousand, tho sometimes in the latter case the thief stands a better chance of making good his escape.

How would Mr. Platt, his neighbor, or the American Poultry Association, go about the task of guarding *ALL* sales of chicks or eggs for hatching that the same may be true to name and variety, according to the Standard of Perfection?

In our little community, there are scattered about on various farms and village lots, those who raise poultry and sell chicks and eggs for hatching. At The Anchorage Farm, we are also engaged in this work. Among other varieties, we raise White Plymouth Rocks. Tho we do not exhibit them, they are bred according to Standard requirements. When we sell eggs or chicks we ask a reasonable price for same. I could name a dozen or more people in this community who sell "White Rock" eggs for hatching, among which stock is a wide range of quality, at from 50 cents to \$1 per setting. Is there any reason why I should presume to investigate the business which is being carried on by these poultry keepers? Could such an investigation be instrumental in transforming them into "dyed in the wool" fanciers? I believe not. If we do not make good under the conditions, it is our fault rather than theirs.

However, most poultrymen thruout the East, fanciers or otherwise, would be very glad to welcome a hatchery in their community that would "drive over the countryside and buy eggs, at 45 to 50 cents a dozen" during the hatching season, for use in mammoth hatcheries, or wherever. In fact I talked with one of our most prominent and reliable Western fanciers at the Madison Square Garden Show two years ago, who told me he had great difficulty in getting 35 cents per dozen for his surplus eggs during the hatching season, and he had to pay all transportation charges. It looks very much to me, as tho both the A. P. A. and Mr. Platt had placed the cart before the horse in this matter of bettering conditions among poultry keepers. There are thousands of prospective poultry keepers who can buy only low priced stock, which stock may be perfectly fit in every particular except that of Standard quality. Who shall deny them the privilege? Certainly not the American Poultry Association, which is supposed to have the best interests of the poultry industry at heart.

Conditions such as Mr. Platt quotes, exist in every business under the sun. If, as he states, there are "hundreds of good breeders not making enough money to buy their wives new hats," it is the fault of the good breeders, not that of the mammoth hatcheries.

It is a well-known fact that the market end of the poultry industry is the biggest end of the business. Why is it not a good plan to boost it, and bring about better marketing conditions? The demand for exhibition quality, Standard fowl is limited, while the demand for record layers, or record meat producers, is almost unlimited. This matter of investigation, in so far as variety of chicks and fowls sold goes, can work both ways. Farmer poultrymen are already organizing. Freckled faced farmer boys are coming out of the tall grass toward the front. Suppose they attempt to tell the

fanciers that only egg record or meat record stock be sold? I have read of prominent fancier's plants where \$1,000 a month profit and over was being realized. Looking at the matter from another angle, is it not just as pertinent to know what the customers received in such cases? Sales must necessarily be overwhelmingly large and the quality somewhat varied, since ideal birds in all varieties are presumably scarce. If we are going to investigate, there will be work for all hands. The time and money to devote to it is all we need.

In a district covering a radius of some twenty miles or more, adjacent to my home, there are hundreds of poultry keepers who buy immense quantities of eggs for hatching and day-old chicks for the production of first quality market poultry. They are not fussy as to the Standard quality of the chicks. All they ask is that they should be from healthy, meat record stock, and good likely, liveable chicks, regardless of Standard quality. Is there any reason why we should presume to dictate to either the producers or the buyers of these eggs and chicks?

People everywhere are buying stock from the hucksters and chicks from the big hatcheries, are eager to do so, and in most cases are getting better bred and more nearly true to name birds than any they had heretofore owned. In the course of the past fifteen years, I have visited a great many poultry plants and hatcheries, many of the latter being so-called "huckster" concerns, and I am unable to see wherein the average hatchery is more dishonest in its dealings, or less desirable to the industry than the average "recognized" poultry plant.

We have to admit that the "billion dollar industry," which we love to talk about, is but a "teeny weeny" per cent a fancier's business, and while the fancier is rightfully proud of the important part he has played in the building up and furthering of thorobred poultry interests, very few, on giving thought to the matter, would wish to place themselves in the ridiculous position of presuming to investigate, with an eye to annihilating a branch of the industry which is at present as important, as the so-called "huckster" day-old chick business. These hatcheries are doing as much to increase the interest in poultry culture today and to build up the industry as any other one means.

To investigate and put up a fight against this branch of the poultry business is a sure way of seriously crippling the American Poultry Association. Modern business is not conducted on this plan. A business concern today which aims to bring about an improved order of things in the matters of efficiency or more honorable methods of dealing with the public, would not so much as consider the suggestion of forcing other houses to adopt their plan of doing business or to conduct investigations of questionable business concerns. Brains are too valuable an asset in the conduct of modern business to waste in the investigation of a questionable concern doing business at some obscure cross roads. The building up of its own business upon a broad and honorable basis worthy of emulation is the course pursued, and the success of thousands of the biggest and most reliable houses, throughout the country following this plan will testify that "it pays." The little fellows, and the new comers in the business, must eventually follow their lead.

Naturally the members of the American Poultry Association want to do all they can for the good of the industry—and they can do a great deal. But in order to "do it big," as the saying goes, they must "do it well," which means that the Association must work its reform from within outward, that would-be poultry keepers everywhere may see the worth of our work, and seeing, emulate it.

Let us assume that the "Ananias" Hatchery advertises Rhode Island Red chicks at 10 cents per. People everywhere this ad. is read, will buy these chicks and the chances are that they are worth the price and will stand just as good chance to live as if they were hatched from eggs from prize winning stock. To be sure their value may not be so great but the asking price is not so great. The fact that these chicks when grown would not take a prize in a class of two at a Skedunk show, is not a reason to attempt to put the "Ananias" gentlemen out of business. In fact we cannot put them out of business tho we may use our time, energy and a good useful \$500 fund of the American Poultry Association in an effort

to do so. The thing, however, is impossible so long as the said "Ananias" Company conforms reasonably near to the laws of the government under which they are doing business. That their Rhode Island Reds are grades—to be strictly plain—is none of our business. The chicks are undoubtedly more nearly Rhode Island Reds than any other variety.

The so-called "day-old chick huckster" has interested thousands, perhaps millions, of reliable people in poultry keeping. From the purchase of the 10 cent Rhode Island Red chick to one of "real show birds" is only a process of a few years and it aids in the development of a desire to own and breed Standard poultry. We might as well attempt to prevent a man from showing a bird which he did not raise, or prevent him from possessing anything which he did not make or manufacture.

In case the "Ananias" Hatchery is a downright "skin concern," as is claimed of some, it is only a question of a very short time when it will be forced out of business by its own customers, and in the meantime the American Poultry Association would be more profitably employed by attending to its own "knitting" of building up the Standardbred poultry business and educating members in business methods.

We need not worry about the general run of these big hatcheries. All along the line they are awakening to the possibilities of their business, especially to the fact, that the better their product, the greater the returns in profits and increase of business.

The following is quoted from a letter from one of the many practical business poultry plants now being developed in comparatively new poultry territory in the great Southwest. Many such letters are received by the editorial department of AMERICAN POULTRY JOURNAL:

"I am breeding S. C. White Leghorns here in the Salt River Valley. Leghorns are being kept extensively here and poultrymen are beginning to wake up to the fact that there is a difference in the breeding behind the chick. While prices are comparatively low on eggs and chicks, orders are generally large, running often from several hundred to two or three thousand, and competition is rather fierce. Most of the eggs and chicks offered come from 'just hens,' and while people kick over the number of black spotted chicks they get, they take them because the price is low—chicks \$10 per hundred, \$90 per thousand; eggs 5c to 10c per dozen above the market. There are a few real breeders here in the valley (an intensively cultivated area of 250,000 acres) but the majority of them are breeding show strains of Leghorns. The majority of those who are breeding along utility lines pay little attention to systematic or scientific breeding. There is quite a bit sent out of the state every year for eggs and chicks also.

"We breeders here have had some rather raw deals from Eastern fanciers. They think we are out here in the sage brush surrounded by the giant cactii and gila monsters and that we don't know anything, so that any old thing will go. With fancy fowls we have a Standard to judge them by and can tell at once if we are 'stung.' But when we get birds the price of which depends upon that invisible element—breeding—we have no Standard except the repute of the seller. It is to get this that I have written at such length."

We cannot, as an organization, assume the role of a mighty police domination over people wherever engaged in poultry culture. We do not need to so protect the buying public, since they are neither wholly ignorant nor helpless and ask not for our protection.

The surest and speediest way to bring about fair and honorable dealing among poultrymen, day-old-chick dealers, "hucksters," or whatever, is by education and example, rather than by coercion or force. There undoubtedly exists a crying need for a wider distribution of authentic poultry lore, but there is no hope to help the industry, or those engaged therein, thru investigations of those over whom we have no control. The government is doing educational work along this line, thru boys' and girls' clubs and extension work from agricultural colleges. In the matter of educating the general public, the investigation of hucksters plays no part. Members of the A. P. A. can make better use of their time by keeping right on producing quality Standardbred fowls, and exhibiting them, forgetting in the meantime the existence of those who are producing near-mongrels or offering them for sale. If there are such in any great quantity, as the reports of the

A. P. A. convention would lead us to believe, let us not be alarmed. It is a case of the survival of the fittest, illustrated in the story of the wolf and the deer. Who could have foreseen that the gentle desirable deer should have survived the snarling undesirable wolf in our forests? But minding their own business did it. The wolves squabbled among themselves and ate one another up. The deer practiced harmony and co-operation.

No real reforming has ever been brought about in this world except that resulting from good example. Arguments and clever speaking are of no avail. *They cannot outlive the breath which puts them into speech without the living example back of them.* To remember this would save us an immense amount of futile meddling. Even in the matter of muzzling dogs, we find that it has failed to stop the spread of rabbies, or to prevent dogs, so disposed, from biting. Besides it has been found practically impossible to enforce muzzling. Education of the public as to the cause and the prevention is the only solution.

In the matter of investigation of hucksters, who is to censor and judge the purity, as to variety, of chicks sold? Most of us have bought eggs for hatching from prize winners and gotten chicks that would not pass as Standardbred of their variety—and these from entirely reputable breeders.

In relation to the censoring of advertising, more than one member, would like to ask where is a beginning to be made by the American Poultry Association and who is to take the initial step? In every magazine published we read of the "purest" soaps and baking powders, of the automobiles with "the greatest endurance," of "the most efficient" telephone companies, of "the safest" railway systems, of "the only reliable" boilers, of "the sweetest" oranges. I quote the following from the December *Modern Hospital*," St. Louis:

"Cocoa is not commonly adulterated at the present time, and it is unfortunate that many manufacturers still feel that they must resort to exaggeration and misrepresentation in order to sell their product. Without mentioning the specific brands, the following false claims were found on the labels of certain cocoas listed in our tables; the purchaser who believes all he reads on the average cocoa label is foolish indeed:

"Owing to the removal of oil, it is certainly the most nutritious and wholesome cocoa now manufactured in the world." As a matter of fact, this brand contained more oil than most of the cocoas analyzed, and it is by no means the 'most nutritious.'

"Triple the strength of cocoa as usually prepared. Preserving in their entirety the nutritive properties of the natural bean." Both statements are obviously untrue.

"Acknowledged by the leading authorities to be absolutely the purest cocoa made." This is untrue, as it contains a large excess of added alkali.

"Soluble and digestible." Both statements are incorrect. "Cocoa is stronger and more economical than chocolate," the reverse of which is, of course, true.

"Double the strength of ordinary grades of cocoa." Obviously untrue.

"Soluble," most of the cocoa-butter has been eliminated, 'free from alkali.' This cocoa is not soluble, it contains more cocoa-butter than most brands, and it contains free alkali, showing that all three claims are false.

"Milk cocoa." The Reichert-Meissl number indicates the presence of no milk-fat.

"Instantly soluble in hot water," 'perfectly digestible,' 'unrivaled as a brain and nerve-food.' These statements are all false and misleading."

Similar misleading statements are found everywhere. But the matter does not end there, for there are firms today who are still advertising the fact that their product took the grand prize at the Centennial held in Philadelphia in 1876, and on down thru the list, World's Fair at Chicago, Paris Exposition, etc. They have every right to so advertise so long as they took such prizes. The censoring of advertising is a matter upon which the national and state governments have been at work for some years. Undoubtedly in time they will be able to work out the problem for the best good of the people generally. A penalty is now attached by law in some states where false, fraudulent or misleading advertising can be proved. This covers all classes of advertising. Poultrymen who desire to remain in business will eventually be obliged to be truthful in their advertising and honest in their dealings with customers.

The matter of censoring advertising in poultry magazines will call for exceedingly generous, unprejudiced, broad minded individuals, who are themselves not engaged in the business of advertising in the poultry magazines or directly interested in the sale of advertising space. Under any other plan it cannot be other than a farce. A statesman recently remarked that "Few ruling groups have ever been proof against the temptation to use power selfishly." Let us give long and careful thought before such a committee becomes a recognized fact in the American Poultry Association.

Since we have not yet reached the millenium, there are attempts to defraud in practically all lines of business. We find misbranded goods, deceptive descriptions, short weights, adulterations. The purchaser has to learn to keep his wits about him. Of course the key to bettering the situation is to educate the public to know and appreciate values. It is because of the beginning which has been made in this direction, thru government activity chiefly, that most products offered for sale today are more nearly what they are supposed to be. Manufacturers, producers and the best business concerns everywhere are learning that the Golden Rule in business pays.

There is room for improvement, as there probably always will be, but the improvement will come thru education of the public to appreciate values. The federal and state governments are everywhere, and in every branch of human knowledge, at work on this herculean task. Much of their work may be faulty and not borne out by experience, but this holds true of every increase in knowledge in the history of the human race.

"Upon the faults of his predecessors,
The future man may erect a building
Marvelous in beauty, and imperishable."

In connection with the findings of the executive board in the Harrison-Pennick case, and the subsequent discussions and "referring back" which said findings brought about, I take great pleasure in quoting the following from the report of the convention by Frank P. Johnson, Indianapolis, in *Inland Poultry Journal*:

"The only excitement of any consequence was at the session Thursday afternoon, in threshing out some grievances reported down from the committee, which we regret to hear or see come out on the floor of the convention. We cannot see where the public or the members of the A. P. A. can possibly derive any benefit thru such work. Almost every prominent breeder is a member of a specialty club of his breed, and if a breeder goes wrong, whether he is the buyer or the seller, the club soon finds out and spots him, and if he does not make good, he sooner or later goes out of business. The merchant, no matter in what line he is, who does not give one hundred cents' worth of goods for one dollar, soon finds out he is making a mistake, and he either makes good or he goes out of business."

The Pacific Fanciers' Monthly likewise classes the continuing of this case before the meeting as "irrelevant, incompetent and immaterial" and further states that it was "little calculated to make the poultry fancy, or industry as others call it, attractive to those listening to the wordy combat."

American Poultry World uses several columns in a drawn-out recital of the findings in this case, in which it appears that tho both litigants appeared personally and agreed to the first findings of the board, that the case was twice after allowed to be brought up by members on the floor; and that the genuineness of its second finding is actually disputed by Editor Curtis, both in the convention assembled in the presence of the executive board, and in the pages of the *World*.

A greater element of nobility of character should enter into the acceptance of such decisions. Once made, drop them! Forget them! Too much criticism is bad. A little in these cases goes a long way.

Once upon a time there was a man who considered himself just a common ordinary human unit, which, of course, proclaimed him an "uncommon man" by those so fortunate to own him as friend. This man once remarked that "if everything about him were known, he would be liable for about ten years' penal servitude," adding that he was probably as honest as any man in the assemblage. The fact is, he was more so.

The object of all Association work is presumably that of

getting together for the purpose of advancing a common cause, which in the long run is helping each other. Our cause will not suffer because we are generous with others thus engaged. Sometimes the enemy we would put to rout is acting in quite as good faith as we, and it is the part of wisdom to give him the benefit of the doubt. Character and credit are qualities which cannot be seized or appropriated, but can be destroyed. Their destruction affects others than those from whom they have been wrested.

If there are individuals in the poultry business, or in our Association who revert back to early ancestors and insist on tearing and biting as of old, or otherwise degrading and

unfitting themselves for constructive work, let us as far as possible ignore their prehistoric tendencies and go about our work of making the American Poultry Association, the biggest, most helpful and far-reaching of its kind, undisturbed by their desire to create a general state of upheaval. To follow their lead in such matters is to court disaster.

If we would hope to bring about permanent good to the poultry industry, we must deal generously with others engaged therein, *set a good example in our own business dealings*, encourage harmony in our association with others and *at least try to be lenient toward the short comings of poultrymen in the making.*

A Well-Conducted Specialty Farm

D. W. Young's Plant a Study in Efficiency and Common Sense Poultry Keeping.

By Prince T. Woods, M. D.

MAN AND BREED WELL MATCHED.—that was the way it impressed us when we visited D. W. Young at his home in Monroe, New York, on December 1, 1915. The S. C. White Leghorn is alert, active, nervous and an efficient worker, — the same can be said with equal truth of Dan Young, specialty breeder of S. C. White Leghorns.

D. W. Young was born in Highlands, N. Y., in 1867, and a part of his early training was received in the U. S. Navy, where for a time he served under George Dewey, now Admiral. Generally, wherever you find a naval man, there you find efficiency and the ability to accomplish a great deal with the least amount of fuss and expenditure of energy. This case is no exception, for efficiency and accomplishment is writ in plain view all over the poultry plant of D. W. Young. The plant is compact, with no need to waste steps or labor, altho there are 35 acres devoted to the poultry. Originality, common sense and labor-saving are everywhere in evidence. We spent part of one day on this farm and we could stay there for a month or more and see something of great interest and learn something worth while about poultry and poultry keeping for every day of our stay.

When we say that the man and breed are well matched, we do not mean temperamentally alone, for D. W. Young understands Leghorns and their needs and it is apparent that they understand him. The methods employed here might not work in all locations or with some other breeds, but they are eminently suited to this particular location and to specialty breeding White Leghorns. The whole thing, man, breed, plant, and operation of same, "nick" admirably, and you get a sense of the fitness of things with no discordant note.

From 2,800 to 3,000 head of breeding stock are wintered annually. There were at least 4,500 head of young and old stock on the plant when we were there. Each season from 1,500 to 1,800 chicks are grown on the home plant and many more are grown on neighboring farms from eggs that are "farmed out." All chickens are hen hatched and hen reared, —and we were told that there isn't an incubator or brooder on the plant. Each spring the countryside is scoured for available broody hens to do the hatching and rearing. Most of the hatching is done in May, tho a few earlier and later chicks may be hatched. D. W. Young, himself, and one \$60 a month man, whose only knowledge of poultry is derived from Mr. Young, do all the work of the plant.

D. W. Young has been interested in poultry from boyhood, his father bred poultry before him and imported White Leghorns as early as 1853 and from his father's Leghorns, without introduction of foreign blood, Young's strain has been built up thru 35 years of consistent and scientific line breeding. He says that he never saw an American Standard of Perfection to look between the covers until he had already arrived with an international reputation as a leading specialist in exhibition quality S. C. White Leghorns and had made many years of sensational winnings at the leading big shows. He did not become a member of the American Poultry Association until 1910. Yet, it is common knowledge, and pretty generally conceded, that Young's strain set the fashion and played an important part in making the present Standard for White Leghorns. With the old fashioned type of Leghorns of 35 years ago, where tail and hackle nearly met in an apparent absence of back, Dan Young started out to breed for what he believed to be an ideal type for the breed; how well he succeeded is attested by the beautiful symmetrical type we find in exhibition quality Leghorns of the present day. He possessed imagination, inventiveness and vision, combined

Close up views of colony coops used by D. W. Young, Monroe, N. Y. These coops carry the exhibition-bred birds from the incubation stage to full maturity. Hens are set here and the chickens mature here. The large door at bottom of front permits all to enter and leave coop without crowding or injury to body or plumage. The coop is 6 ft. long by 3 ft. deep; it is 3 ft. high in front and 2½ ft. high in rear. As will be noted the roof is hinged to facilitate cleaning. The long double doors in front are for ventilation and protection from storms and to permit free access. Each door is about 14 in. by the length of coop. Top opening has a wire screen and a wooden door hinged at top as shown. Lower opening has an outer wood door and an inner screen door, both hinged at top to swing out like an awning, same as top door. In spring these houses are fitted with nests for sitters, bedded with tobacco stems. As chicks mature a roost is provided. Owing to the activity of the Leghorns it is possible to run these coops close together to save labor and the growing birds have practically free range.—P. T. W.

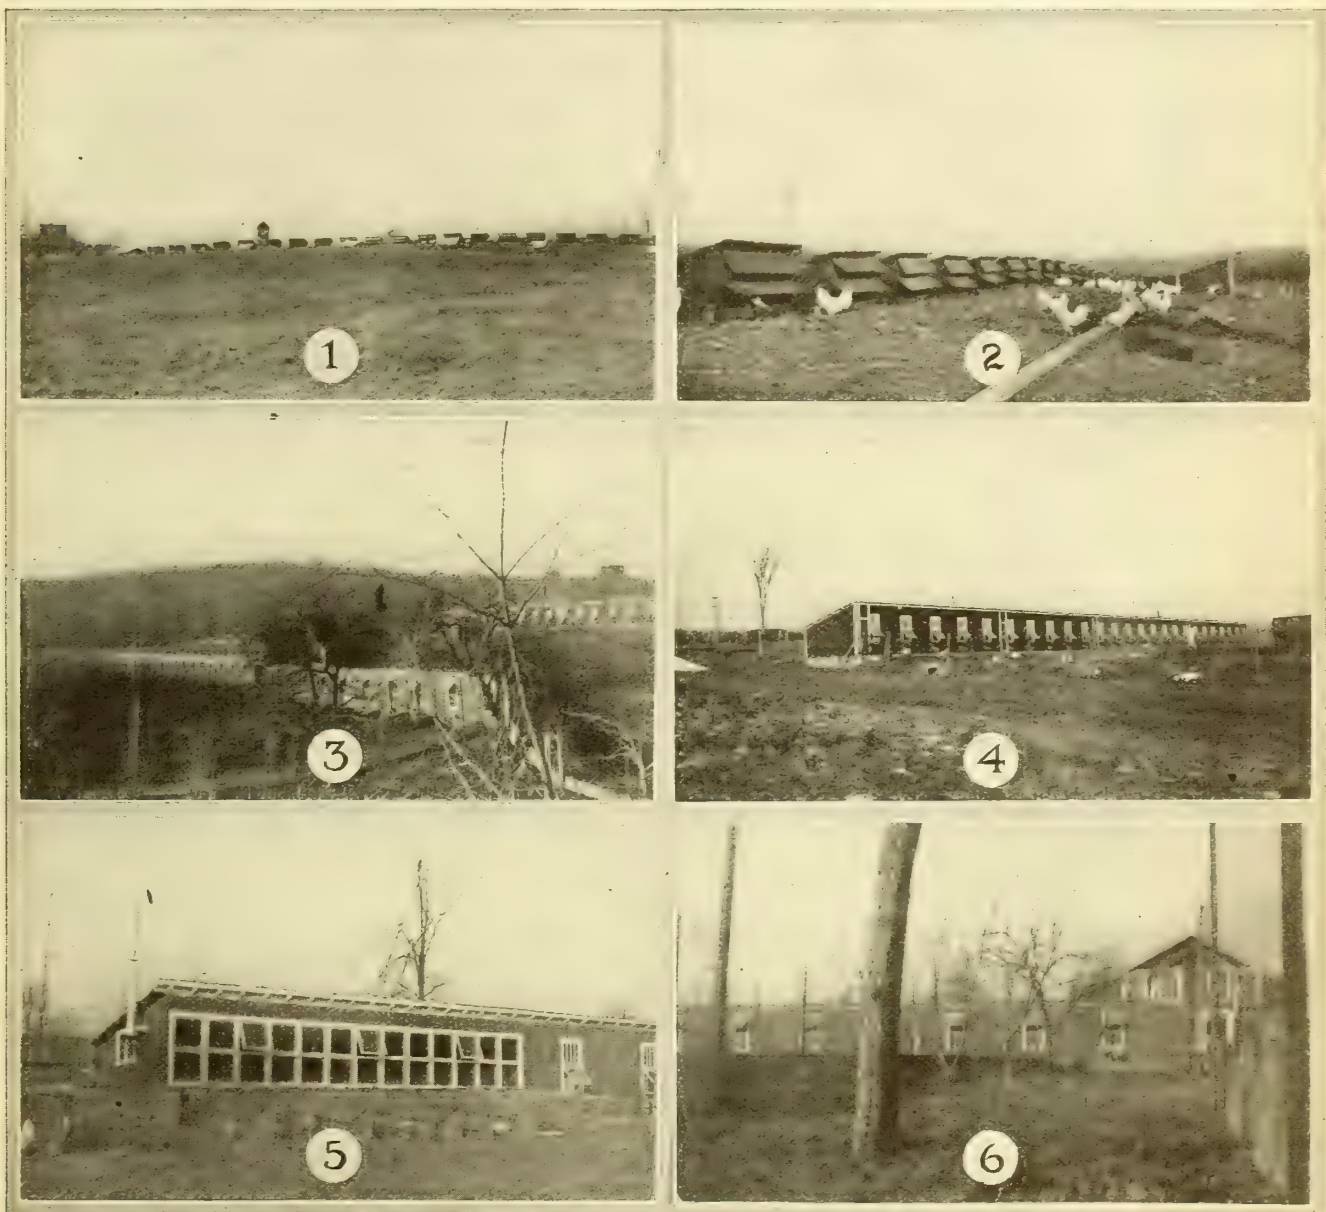

with ability, and he put his whole hearted effort into the development of his ideal of the breed. Today, he tells us, and we believe him, that his matings produce 97% good specimens and that culls are so rare that the family table, and occasional gifts of chicken to friends, will take care of all of the cull Leghorns produced on his plant.

Of his early interest in poultry the story is told of how Dan, when a little lad, was promised some settings of bantam eggs by a farmer, if he would come out to the farm and get them. The temptation was too great for little Dan to resist, and he "played hookey," for the first time in his school experience, and trudged the long walk out to the farm, where he was fairly loaded with bantam eggs. On the way home he "played out" and went to sleep in the woods with his arms around his beloved hatching eggs, and there the searching party found him. As punishment for being a truant, his parents decided that he should not set the eggs, but good old Grandma, as grandmothers always do, came to the rescue and told Dan that she would take the eggs to her home and he could hatch them there. Well, the bantam hatching went thru successfully, and from that time on the boy's interest in poultry thrived. Like many other successful fancier-breeders, he has bred a good many varieties, but he early

decided to specialize in White Leghorns, because the breed suited him better than any other.

Whatever real and personal property D. W. Young now possesses, and we do know that he has approximately \$40,000 invested in home and poultry buildings, and at one time turned down an offer of considerable over \$100,000 for his plant and poultry business. He says it was all made out of the thorobred poultry business and money made with poultry. No Wonder he retains so much of his early enthusiasm for the breed of fowls that has done so well in his hands and done so much for him. And right here we are going to tell you one of the secrets of Dan Young's success outside of his own ability and work and that is, he has a devoted wife who believes in him and who has a keen interest in all that he does and an interest in his fowls, that is second only to his own. That makes a life partnership that is certain to induce accomplishment.

Only long continuous breeding houses are used on the Young plant, and they are essentially Leghorn houses. There is one long house over 400 ft. long, with a feed house in the center, that contains pens each 14x16 ft. Another long breeding house about 424 ft. long with pens 12x12 ft. A special cockerel house 100 ft. long by 12 ft. wide and a wash house

Views taken on plant of D. W. Young, Monroe, N. Y., December 1, 1915. It was a cold day with poor light and we were further handicapped by getting a poor lot of films. 1. View of chick growing range where there is a row of one hundred colony coops and a "sentry box"—the tall building—used for a watchman when occasion demands. 2. A close view of colony coops, then housing surplus cockerels. 3. A winter bird's eye view of the long breeding houses and grain house in center. 4. One of the new long breeding houses. 5. The light, sunny, well-aired training, washing and conditioning house with yards for cooped males. 6. One of the big breeding yards 12x150 ft. just as it looked with heavy growth of rye and Kentucky blue grass ready for winter greens on December 1.—P. T. W.

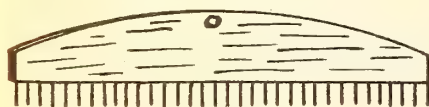

40x14 ft. All buildings are so placed that no steps are wasted in doing the routine work. All outdoor breeding yards for pens are 150 ft. long by the width of the pen, so that green stuff can be kept growing in the yards. Well-kept fruit trees are found in every yard, where they supply desired shade and a profitable amount of fruit. Every building is well built, permanently built, and made as nearly rat-proof as possible. The houses all have a concrete foundation and floor. The

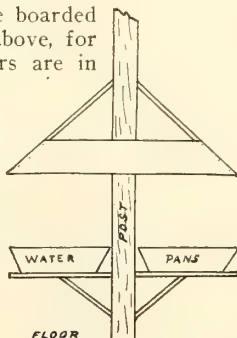

View of special cockerel coops. Show birds are successfully wintered here. D. W. Young is shown posing one of his blue ribbon Madison Square Garden winners and, in spite of the wind that was blowing, you can see the bird is a mighty good looker. Taken at Monroe, N. Y., December 1, 1915. These cockerel coops are a simple colony coop 3x6 ft., divided into two compartments, each 3x3 ft., with a comfortable roost. They are 4 ft. high in front and 3 ft. high in rear. The roost is placed about 2 ft. above floor to give bird plenty of room. The floor is of wood. In front of each compartment is a door containing a glass window. Attendant has access to the coop by the roof which is hinged in front. In front of these coops are placed special yards 6x14 ft., with a middle partition of boards, giving each bird a wire enclosed run 3x14 ft. This gives comfortable quarters for single birds and plenty of opportunity to exercise and keep in condition. It also makes work easy for attendant.—P. T. W.

breeding houses have a solid hard pine floor above the concrete and so protected that rats cannot get beneath it. The houses are of novelty siding and sheathed on inside to insulate them and make them weather proof. Each pen has a glass window 4½ ft. high by 3 ft. wide. This is divided in the middle and both halves hinged at the top and made to swing up and out, like an awning, and held in place by a special window bracket patented by Mr. Young. Inside the window is a screen door of fine mesh wire to keep fowls confined when window is open and to protect the glass. Below each window is a special ventilating opening at floor level. This consists of an opening 2 ft. high by 3 ft. wide, fitted with a frame door having cotton cloth on the outside and fine mesh wire netting on the inside. On outside of the house, hinged at top, is a door of novelty siding that fits awning-like above this ventilating opening and prevents any storm from driving in. The arrangement of windows and ventilating door make it possible to have an abundant supply of fresh air without any draft in the house, good ventilation at floor level—or "on the hen's level," as Mr. Young puts it—and an arrangement that positively prevents rain or snow driving in to wet the floors or litter.

The partitions in these houses are solid board from floor to roof in rear of house where roosts are and are boarded up about 2½ ft. from the floor, with wire netting above, for balance of the partition. The communicating doors are in

Home made hand rake for cleaning drop boards, used by D. W. Young, Monroe, N. Y. This rake is made of hard wood and is about 2 ft. long. The teeth are 8d coarse wire nails, with heads cut off. It is easy to make and easy to use. The drop boards are kept covered with thoroly dry, fine sand to the depth of half an inch or more. The sand takes up the moisture and clings to droppings. Where raking is done daily the work is comparatively easy. Droppings are raked off into light box, having a handle, and are transferred to a wheelbarrow.—P. T. W.

Plan for keeping drinking water clean used in the long cockerel house in basement of D. W. Young's barn. Pans rest on a shelf at convenient height and are protected above by a board hood.—P. T. W.

middle of partition. At regular intervals large doors in front of pens give access to the yards. The drop boards with roosts above are placed at back of pens about 2½ ft. from the floor. A strip of finish board is put on front of each drop board to give it a tray-edge and prevent sand and droppings being knocked off on to floor. Roosts are made of 2x4 in. stock, 2-inch side up and are placed about a foot above the drop board, and about 2 ft. from rear wall and 2 ft. apart from centers. This is to prevent injury to tail feathers of the birds.

In connection with the drop boards and their care, is one important item, which makes for labor saving—the drop boards are kept covered with thoroly dry sand a good half-inch leep. The droppings are removed daily by use of a home-made hand rake that makes the operation very simple and easy. A sweep of the rake beneath the roosts carries the droppings, with the sand that has absorbed moisture clinging to them, into a box carried by the attendant, who transfers them to a wheelbarrow. We saw a practical demonstration of this cleaning and it takes but a very few minutes to each pen to do the trick.

In the storeroom part of the breeding house is a well ventilated room, or bin, which contains many tons of well-dried sand, kept purposely for use on drop boards. This sand room is filled each year with a sufficient supply of dry sand during the dry season. Examination of the drop boards showed that no moisture from the droppings had penetrated to the wood, thus good sanitary conditions are insured. A little dry sand is also used on the floors and above this good dry litter of bright straw. The litter is not made too deep, as deep litter may invite dampness and packing of the straw. A watering device, in every other partition, waters two pens at one time. Hoppers are supplied for grit and other necessities and a special hopper for dry mash.

The grain room is particularly interesting. The floor of bins is of wood with concrete beneath. In the concrete and under all the sheathing is fine mesh, heavy wire netting to make the whole rat-proof. The bins for grain have slip fronts of matched boards so that entire front of bin may be opened for cleaning and ready access. There is storage room enough to hold about three carloads of feed.

Feeding the breeding birds is, with the exception of the dry mash, hand feeding, but here the work is simplified by having the morning scratch grain ration fed at night, after supper, when the birds are on the roosts, so that they can get busy at daylight in the morning. After supper, when he makes his rounds to close up the pens for the night, the attendant scatters scratch grain in the litter in the proportion of half a handful to each bird. Mr. Young says that any bird that went to bed the least bit hungry is sure to be one of the first off the roost in the morning and so this plan not only saves labor, but it serves to equalize the distribution of food. Another scratch grain feeding is given in the afternoon about 3 o'clock and never later than 3:30 p. m. The scratch grain is made of one part each of corn, wheat, and barley and two parts oats. At noon, to keep the birds busy a little oats and golden millet are scattered in the litter, but this is not fed if there is any scratch grain remaining in the litter.

Dry mash is fed in hoppers which are opened at noon and closed about 2 p. m. Mr. Young says that dry mash for his

Dry mash hopper used for birds on open range by D. W. Young, Monroe, N. Y. This hopper is 6 ft. long. The end board is about 11 in. wide by 18 in. high. The side strips are about 4 in. high. The roof is made detachable in one piece and is covered with roofing paper to make it watertight. It is hooked in place, at each end. The roof boards are about 12 in. wide on each side of hopper and extend about an inch and a half beyond each end. This keeps out all drip. The dotted lines show the position of the inside boards which make the hopper. These are placed straight up and down, so that mash cannot clog, and they extend to within about 2¼ in. of the floor. It makes a good practical hopper, easy to use, and it holds a little more than a full bag of mash.—P. T. W.

Leghorns is "like pie" and, altho he wants them to have a liberal supply, he wants them to get it quickly and not to get stalled on it by having it always before them. The dry mash is prepared by special formula at Orr's Mills from the usual ingredients. One special feature of this dry mash is that the beef scrap used in it is as fine ground as it is possible to obtain it. This makes it necessary for the birds to eat the whole mash mixture to get the beef scrap; it was found that where coarse scrap was used, some hoggish member of the flock was sure to pick out most of the meat and let the others go without, and also there was temptation to pick the mash mixture wastefully out of the hoppers in order to get at the meat. Houses are piped with faucets at regular intervals, so that watering is convenient and easy. Green food is supplied as available, but for the greater part of the year the yards carry a fine growth of rye and Kentucky blue grass, which serve the dual purpose of sweetening the soil and giving a splendid yield of the best kind of succulent greens. On December 1st we found rich, heavy, green growth of tender rye and blue grass in the runs.

The growing stock have practically free range over grass land, there being 85 adjoining acres of available range, of which Mr. Young has the use for his flocks. The colony houses for chicks, of which there are 100 or more, are placed in long rows close together. Here the hens are set, the chickens hatched and grown, with as little moving about and handling as possible. As stated, all hatching and rearing is done with hens and practically all is done in the month of May. This simplifies matters considerably. In front of the colony houses runs a long trough of boards at ground level, as no feeding on the ground is permitted. At regular intervals there are roofed hoppers for dry mash. The broody hens are set in these colony houses in nests made of tobacco stems. Before nests are made the houses are sprayed with a lice-killing mixture of one part crude carbolic acid to three parts kerosene and this is followed by a thoro whitewashing and the coops allowed to dry in air and sun. This gives a clean start. The brood hen gets a good dusting with lice powder before she is put on the nest. Each week she gets another dusting to make sure of getting any lice that escaped the former treatment or hatched since. The nest of tobacco stems is another safeguard against lice. When the hatch comes off the mother hen gets a very little 33% blue mercurial ointment applied above and below the vent and to the under side of wings close to body. With these precautions taken, Mr. Young says that lice trouble his fowls and chicks but very little. The lice-killing mixture mentioned is also used regularly on the roosts in houses for growing stock and adult birds to prevent lice. It is always applied early in the morning and allowed to dry in thoroly before the birds are permitted to roost.

In growing young chicks the mother hen is confined and the youngsters allowed to range. For greens they get good fresh grass. They are permitted out on the ground from the time they are ready to leave the nest. Great care is taken to supply chick food that is made from sound old grain only. The white corn used for feeding must be sound and three years old. More bowel trouble and disease is believed to come from poor and unsound corn than from any other cause. The first food is a chick food made of fine cracked white corn, cracked wheat, pinhead oatmeal, and cracked barley groats. Bran is supplied for mash. The range supplies greens and insects. Growing stock gets practically the same ration except that the cracked corn is of larger size and whole wheat, hulled oats and whole barley groats are used. No meat is fed until the birds are three months old, but they get plenty of grasshoppers, bugs and worms on range. Altho fed three times daily the chickens are not heavily fed, the object being to make good sound bone and muscle with but little fat.

The young and old stock we saw on Dan Young's farm certainly demonstrated that he breeds, feeds and manages for health and vigor. The birds were sound and in first-class order, and we did not see a sick or dopey specimen on the place. As for color, there was ample evidence that the birds breed white, for they were as naturally white in feather as are the beautiful white Homer pigeons that have always made a standard for white feather color. Everywhere it was the same, out on range where surplus cockerels still occupied

colony coops, in the cockerel pens and in the breeding pens. the birds were clean, white, in the pink of condition and healthy and vigorous. Such specimens cannot need a great deal of conditioning and preparation for exhibition, and, in fact, they do not get it.

Compared with the amount of business done, and with all white birds, the cooping and conditioning quarters are about as small as any we have seen. Most of the room in same is

Another close view of the colony coop used by D. W. Young, Monroe, N. Y. There was a cold, raw wind blowing at time photo was taken on a rather gray afternoon in December. Most of the birds are in the coop on the roost. These are surplus cockerels. A few feet in front of this row of coops is a flat wooden trough running the whole length of the row of coops, probably 400 ft., and all grain is fed here. No food is thrown on the ground. Mash hoppers are placed at regular intervals all along in front of this row of coops. Drinking places are provided at convenient distances. The birds are grown in condition and stay in condition.—P. T. W.

given to cockerel coops and outdoor runs. The wash room is small indeed. There is not a great deal of special cooping done. Whenever necessary to keep birds in training, they are generally in comfortable coops with an outdoor run. Close cooping is practiced as little as possible and for only brief intervals. One reason for this is that Young birds are always in condition. Another reason is that he keeps his birds tame and never breeds from what he calls a "wild, mean dispositioned specimen"—the birds are bred tame and are naturally tame, tho not lacking in vigor or aggressiveness. There is a lot of understanding between the breeder and his birds and it is a safe guess that Dan Young knows most of his birds as individuals. Therein lies another one of the secrets of his success. Birds that are naturally timid and nervous get their first handling at night, they are never frightened and care is taken to feed them some special tidbit, like meat or other specially liked food, to get them eager for a visit and handling. Then too the well-known scratching of throat and wattles, that is so well liked by poultry, is also invoked to encourage the birds to pose to best advantage. Except for special food, as mentioned, the birds in training receive practically the same ration as the breeding stock. So far as possible the real fitting and conditioning is a continuous process and conducted out in the open on good green range.

As has been stated, the Young strain has been line bred consistently for 35 years without the introduction of "new blood." The foundation stock was healthy and vigorous and represented several families. In a large measure these family lines have been maintained. When it is necessary to make an unusually close mating, extreme care is taken that the mating is well balanced, weakness of any kind is balanced by strength on the other side of the mating. Health and vigor is always required in the stock, and it is never lost sight of.

Breeding stock and eggs for hatching are sold every day in the year. A considerable volume of business is done every season with old customers. Every step in the business is conducted with simple, easily understood, common sense system. Protection against loss of breeding stock by fire is provided by the usual precautions and also by having good stock placed where all could not be swept away at one time—in other words, the eggs are not all in one basket.

Some market eggs are sold in the Fall, thru September, October and November, to take care of the surplus output. Each season chickens are grown on outlying farms from

Young strain eggs. Careful account is taken of the feeding of these flocks and the care that they receive. Even the best of poultry can be spoiled in the care, management and feeding during growth, and it is necessary to oversee farms where chick growing is farmed out. Mr. Young estimates that the cost of food required to grow a Leghorn chick from shell to three months old will range from 7 cents to 11 cents per chicken. He pays his growers \$1 each for growing early May hatched chicks and 60 cents each for growing chicks hatched after the middle of May. He requires that all chicks

grown for him must be natural hen-hatched and hen-reared, and that they must be cared for as he prescribes.

As a study in simplicity, system, efficiency, common sense management and perfection of details and labor saving, D. W. Young's plant is worth a visit by any person interested in poultry keeping. We have only briefly mentioned here a part of what we noted during our short visit. Some day we are going again in the chick growing season, and we expect to tell readers about it.

Fancier — Breeder — Utilityman

Why Not Be Poultrymen and All Work Together? The Field Is a Wide One With Opportunity for All. By Prince T. Woods, M. D.

WHY SO MUCH DISCUSSION about "fanciers," "breeders" and "utilitymen" and so much talk about "that word 'utility'?" Are we not all poultrymen and working for "more and better poultry?" The field of endeavor in poultry husbandry is a wide one, there is plenty of work that needs doing, there are many branches open to those who would specialize, and there is an opportunity waiting ready for every earnest worker. Why not try to get together and do a little team work for the common good?

How many real true fanciers have we?

We take it that the true fancier is a poultryman who is working to attain an ideal, striving to help create something beautiful and worth while, without looking for, or expecting to receive, financial reward for his labor. He does not breed poultry for gain. He shows his birds for the love of the sport and for the satisfaction of proving, in competitive exhibition, that he has really bred something better than his fellow fanciers. We have some such real fanciers, but how many?

When a "fancier" commercializes his business, seeks to make it pay, he really becomes a specialty breeder, does he not? You would hardly say that it was really true sport to show to win—even if one must buy birds to show and show only where the chances are most favorable—chiefly for the advertising value of such winnings, and the orders for breeding stock, hatching eggs and show birds it will bring in? An honorable and legitimate business surely, but why split hairs over definitions? Why not get right down to brass tacks and admit that we are all poultrymen and that breeding Standard-breds for exhibition values is a desirable interesting and remunerative branch of poultry husbandry? Also that breeding for utility or practical values, in greater egg yield and better poultry meat from Standard-breds, is another branch of poultry work, which may be combined with the production of exhibition quality, and which may be made equally desirable, interesting and remunerative? Surely it isn't necessary for A. P. A. judges to try to caponize the word "utility" and alter its real value and true meaning.

Just look over the following comment recently made concerning "Utility:"

"THAT WORD UTILITY."

"The word utility has come into extensive use, because it appealed to the masses of uninformed who either were without any experience or were about to engage in the poultry business and who had little or no conception of it. The term appealed to them as it should if it were applied to poultry in the dictionary meaning of the word. * * *

"Properly speaking the word utility as applied to poultry at the present time refers to that class of poultry that is discarded as culls by the fancier. Thro misconception the term has been misused, as the true meaning is 'useful.'"

"The word as first applied to poultry was used by breeders of Standard fowl who wished to dis-

"THE UTILITY CRAZE."

"The breeder of strictly fancy fowls, that is the man who does not pretend or wish to make his poultry money thru the sale of eating chickens or market eggs, is constantly studying his particular variety and spending many hours at night in planning a method of mating up his birds so as to produce the best young stock possible. * * *

"The man who turns out succulent and tasty fowl for the high-class markets is equally zealous in experimenting with crosses, finding new methods of quick fattening, studying the best means of picking and dressing and is anxious to surpass his neighbor in his own field of endeavor. * * *

"Let the public beware of false

pose of their culls—stock that was not good enough for exhibition or breeding purposes.

"Included in the so-called utility grades, the expert poultryman disposes of crow-headed birds that are lacking in stamina and vitality, and birds in which these qualities are missing can never be expected to do heavy work as laying fowl. Just as the 'expert' disposes of crow-headed birds, so does he also get rid of roach-backed, those in which the legs are not set well under, wide apart and those that are knock-kneed. Flat breasted birds are also included in this class, not one of which can be expected to do good work even as a laying fowl, as a table fowl or to meet the requirements of a breeder. * * *

"Standard-bred fowls are preferable for uniformity in product if for nothing else. In the so-called utility fowls this point is sure to be lacking and to grow in variation as the utility craze progresses, as the utility breeder does not care a straw for Standard requirements and trusts to luck in his breeding. Having no Standard ideal to go by (the majority of these so-called utility breeders never saw a copy of the book), they can mate for but one purpose and that is to renew their flock. It goes without saying that a variation in form or shape will shortly be apparent and in many cases be exaggerated. * * *

"To give the devil his due, we believe that the greed for perfectly good dollars on the part of certain breeders of Standard-bred fowl led them to attach this word utility to their culls in order to dispose of them to advantage to the unsuspecting and uninitiated poultry public. This is purely a logical interpretation of the cause forced upon us by the wide publicity given the so-called utility cause in the poultry press. With column after column of this buncombe, appearing month after month, it is only natural that a great amount of favorable sentiment would be created and that the beginners would turn to the class of fowls that had been heralded as mortgage lifters and producers of quick riches. But, let us ask, how many are there who have started with stock of this class that have made a success of poultry raising? True it is, that there are exceptions, but where there has been one success, there have been one hundred failures."—William C. Denny in November A. P. W.

prophets in the land of poultry; let it think before it acts and let it disabuse its mind of the thought that there are two distinct and separate kinds of poultry 'utility and fancy,' for one is actually the same as the other. They both sprang and always will spring from the same parents. They are not distinct, but one and the same and if any difference does exist it is only along the line of specialization. Let the public remember that because one man's birds lay better than another's, or because they are more full of meat than another's, does not make them a separate or distinct breed or variety. It does not put them in the so-called 'utility' class as distinct from the other man's and it does not make them any better in the true sense of the word than originals from whence they sprang. They are simply bred along certain lines to their detriment along other lines. I myself carry a large number of what other people call utility Leghorns, that is these birds are bred with the special object in view of securing a certain strain which will year after year produce a high flock average of marketable eggs—with that sole object in view; that is I have ceased to expend any effort with these birds upon their minor fancy points. I do not care particularly whether the birds have combs with five or six points. I do not care particularly whether they carry their tails at an angle of 30 or 45 degrees. I do not care if their ear lobes show sometimes a little buff or a little red. My particular object in reference to these birds is to have them continue to yield a large number of eggs. Thus these birds are not as good in fancy or Standard-bred requirements as some others which I have of the same variety, and it is a good deal easier for me to bend my effort in one direction only, rather than strive to maintain all of the fancy points together with the ability to lay eggs; but that does not mean, and never will mean, that either myself or any other man cannot produce and continue to produce a strain of Leghorns which will have both the ability to lay a large number of eggs and all of the smaller points required by the Standard of Perfection. Such a strain can be built up and has been built up by many men and the fact that my birds, like hundreds of others, are not perfected in all respects does not entitle them to be called 'utility Leghorns' as distinct from Standard-bred Leghorns; for please remember that they are all Standard-bred. They are all pure Leghorns. They are all line bred Leghorns. They are simply not show Leghorns because they have not been bred for show Leghorns."—Charles D. Cleveland in November Everybody's Poultry Magazine.

Read the above quotations painted in parallel column and we believe that you will agree with us that, while Poultry Judge Charles D. Cleveland appears to be swimming grace-

fully and toward a definite goal, Poultry Judge William C. Denny appears to be beyond his depth, unable to swim, and floundering in a most distressing manner. It is too bad, for if we are to take Mr. Denny's word for the doings of "experts," "certain breeders," and "fanciers" we might be obliged to classify them with the other "pirates and parasites" we have heard so much about.

Now, as a matter of fact Mr. Cleveland is right that "utility" poultry and "fancy" poultry are both Standard-bred poultry and that the difference is only in the manner, and for what purpose, the strain has been bred. It *positively is not true* that "utility" specimens are "fanciers' culls," including crow-heads, roach-backs, knock-knees, and so lacking in stamina and vitality that they cannot lay or breed right. If any breeders sell that kind of "culls" as utility specimens, then they are woefully ignorant or criminally dishonest. The only reason for selling deformed and physically weak specimens as utility stock must either be ignorance or actual crookedness.

We know a good many fanciers and specialty breeders, good men and true and some of the finest men we ever tucked our feet under the same table with. We know that these men do not sell weak, sickly, deformed culls as utility stock. Some carry special lots of breeding birds that are line bred for egg production, or for meat and quick growth, or for both. Others mate up large flocks of surplus sales stock and Standard-bred specimens that are lacking in minor show points, generally using a large number of females with several very good males, and call these their "utility matings," from which "incubator eggs" and low-priced settings are sold. We have, however, dealt with some little known breeders and have received very inferior culls for utility stock. In each case we put it down to ignorance and not dishonesty.

Now, we also know intimately a number of good poultrymen who are utility specialists and they one and all use pure bred Standard poultry, with a few exceptions, who specialize exclusively in quick grown market chickens and use first crosses of Standard-breds. We also know quite a few successful breeders of exhibition quality Standard-bred poultry, who began as "utility men" as egg farmers and as eggs and market poultry producers. Some of these men have, of recent years, been consistent winners at the leading big shows.

Utility poultry never did and never will really mean weaklings and unfit culls, no matter what ignorant or dishonest persons may have done. Plenty of utility specialists own Standards and use them. True utility bred poultry is Standard-bred poultry. The utility feature is simply a line of specialty breeding, just as breeding for show points is specialty breeding. As for "failures," didn't a friend of Mr. Denny's tell on the floor of the A. P. A. Atlantic City Convention about the "poor suckers" who failed in the breeding of Standard-bred poultry, because they tried to mate Standard ideal males with Standard ideal females and became disgusted because they could not get results? Was not an argument made that instructions for mating and breeding should be included in the separate breed Standards, so that beginners might mate understandingly and get better results? Isn't it pretty generally admitted that show females and show males mated together will not get a good percentage of show specimens? The Standard describes the ideal male and female for exhibition purposes, but it don't tell how to mate to get them. It takes experience and skill to mate and breed birds that will win in the show room. It is a branch of Standard poultry culture, this specialty breeding for exhibition quality and it is a mighty interesting and desirable specialty. Show poultry and utility poultry are and should be Standard-bred poultry. The fancier and breeder breeds his Standard-breds for show quality or to produce show quality. The utility specialist works along eggs and meat lines with his Standard-breds. The former gives great attention to the lesser Standard points, and the latter heeds the small show points little, but does breed to Standard, even tho he gives greatest attention to egg production, quick growth and uniformity.

To breed Standard-breds for utility qualities, that is along either eggs or meat lines, or both, the chief foundation requisites are HEALTH, VIGOR and VITALITY. Without such a foundation the man who breeds along utility lines cannot succeed, he must have a healthy foundation stock that possesses abundant constitutional vigor. We know what we

are talking about, for we have been breeding poultry along these lines for some time, getting right out on the farm with them—not sitting in a city office and dictating guesses to a stenographer on the top floor of a brick block, where the only "chickens" in sight wear their feathers on hats or on detachable neck gear.

No man who specializes in utility lines with Standard-bred poultry can afford to breed, or sell as breeders and layers, deformed specimens or those lacking in health, vigor and vitality. In fact, the sensible utility poultryman will never breed a bird that has had any serious illness at any age. He breeds for health and vigor. He breeds for uniformity in growth and yield. He breeds for uniformity in quick development and uniformity in maturity. He has to do this in order to stay in the game and make a profit.

There is absolutely no money to be made in the haphazard breeding of nondescript poultry for market eggs and meat. You can't get back a new dollar for an old one working that way. It takes specialty breeding and expert selection to grow poultry successfully along utility lines. To maintain a flock of heavy layers, one must have health and vigor and must select and breed with egg yield as an object, and it is best to stick pretty close to the main Standard requirements for the variety, for uniformity in the flock is an essential in breeding for eggs. If breeding for meat, one must work for uniformity in quick growth, size at any given age, husky big bodies and well set large legs. There absolutely is no place for a crow-headed, roach-backed, wry-tailed, crooked-breasted, knock-kneed bird in a utility specialist's yards. Every poultryman may get some such weaklings, but he should always sell such as quickly as they are marketable, to the hen trader, who buys for the cheaper class market trade. There are a great many grades of market poultry, but it pays to grow only the best.

Look up any poultry article exploiting any of the so-called "popular varieties" and you will invariably find reference to their superior laying qualities or meat qualities, or both. Now if beauty and utility are not wanted in double harness, why always make a bid for boosting a variety by talking about its utility qualities? We most emphatically believe in Standard-bred poultry and we believe in combining beauty or show qualities with utility or practical qualities, just as far as it is possible to do so. But we have no doubt that there will always have to be specialists in all branches of poultry culture and that the specialists will do the most business and earn the greatest profits.

While it is true that all Standard poultry possess, in some degree, certain utility value, it is also true that some are more to be desired from a fancy breeding and show room point of view than for their utility merit. As a rule the true fancier of such varieties don't care much about their utility qualities so long as they lay well enough to give him birds to show and win with. He generally considers them as preeminently "fanciers' fowls." Yet, all of the leading Standard varieties possess exceptional value for eggs or for meat, or as general purpose varieties for both eggs and meat: all that is needed is specialty breeding and experienced selection, with certain skill in handling, to get the desired results.

So, why not dust the chips from off your shoulders, friend fanciers, breeders and utilitymen? Just remember you are all good fellows together, all poultrymen, and all interested in more and better Standard-bred poultry.

The proposition of establishing poultry plants at each of the state institutions—penal and charitable—is being agitated in Oklahoma. It has already been tried out at the institution for feeble-minded at Enid and has proved successful. Some time ago a small plant was installed and now there are over 1,000 chickens on the place. The object is to make these institutions at least partially self-sustaining.

* * *

Prof. N. E. Chapman, of the Agricultural Extension Division, University of Minnesota, estimates that there are 16,000,000 hens on the 160,000 farms in Minnesota. He has figured it out that if these hens will average one dozen eggs per month during the winter, the income of Minnesota's farmers from eggs alone would be about \$5,000,000 per month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

WITH PRACTICALLY all of the Old World under the restraint of the CENSOR, it is not particularly surprising that the censoring craze should afflict the mercurial minds of some of the hot heads in this country.

Nevertheless, the spectacle of the American Poultry Association, in convention assembled at San Francisco, seriously voting to censor poultry advertising and to investigate the plants and business of "hucksters", day-old chick hatcheries, and certain other poultrymen, strikes us ridiculously funny. The absurdity of the whole thing is increased by the fact that the men, appointed on the committees, have already demonstrated in the public print that they are biased and prejudiced in the matters to be investigated or censored.

Just where this little handful of members,—who by no means represent the whole association,—get their authority, or where the association has any legal authority, to conduct such investigations or attempt such censorship, or that they could be depended upon to conduct such in a fair, unbiased and just manner, does not appear.

Also, there is very good reason to believe that some of the advertising, acts, and methods of the association itself, might well be reformed in the interests of truth, fair play and good fanciership.

Please do not misunderstand us. We believe in and are just as strong for Truth in advertising, and Honesty and the Golden Rule in business, as anyone. We know there is room for a lot of improvement in all advertising, we insist upon a good many changes before we accept advertising and we believe that truth in advertising is coming fast. But we

cannot get into the state of mind of the man who throws a fit because of the other fellow's advertising and then goes to work, in his own catalogs and display ads, and perpetrates something infinitely worse and much more calculated to deceive. That sort of reform is humbug, and to see it proposed is the height of the ridiculous. When a surgeon wants a festering sore to heal, he tries to get the healing process to work from within outward,—and that is the only way he can succeed. The same thing applies to the sore spots in the poultry business. Start the healing process from within. Let the clean up come in the association and, particularly, in the methods of the would-be reformers.

We like to see, and want to see, truth in advertising, but we really cannot get very much excited over advertising catch lines like "Best in the World," etc. We Americans do not easily get away from the idea that a certain amount of "hot air" is required in advertising. Poultrymen are, most of them, enthusiasts. The last big show is always the "biggest and best ever held." It is largely the same sort of emotional display that causes the young bridegroom to proclaim that he has "the best little wife in the world." Probably he has, FOR HIM. We have had very prominent breeders most seriously tell us about the superlative value of their strain and that they did not know where on earth they could go to get new blood, if they had to. Sure, they believed, and believe it. It is because they believe just this, that they succeed so well as specialists. You can't tell us that that sort of thing is not honest. We look on enthusiasm and interest of that sort as one of the most honest and worth while things in the world, and we don't believe in trying to kill it.

SOMEBODY, a long time ago, said that the poultry business is a "season business," confined to the "short show season" and the "hatching season." Wiseacres repeated this "season business" buncombe until pretty nearly the whole fraternity has hypnotized itself into believing it. We said "pretty nearly" all, for there are a few successful leaders in the business, who are perfectly willing that the majority should swallow the "season business" dope—it leaves the field more free to them—and they are keeping busy and doing business every day in the year.

It is about time to forget about "season business" and to talk and work for "all the year around business." The every-day-in-the-year poultry business is no dream of a visionary,—it is a very ordinary fact. This is a big country and somewhere within it, eggs are being incubated and chickens grown every day, and we have nearly every known variation of climate. We don't have to limit our poultry business entirely to our own country, and we do not do it, for our poultry magazines go all over the world and bring in business from every country where there is interest in pure bred fowls.

Yet, the "season business" habit keeps merrily on. Our poultry magazines for about five months of the year have to thin down to almost half size because of the small amount of advertising carried during the "slack season." Our incubator and supply houses—many of them, but not all—make a big noise, put on extra working force and work overtime, for a few months, and then almost close down and make only "feeble peeps" for publicity during the rest of the year. Many of our breeders boost their favorites strenuously from November to May and then drop out of sight, so far as the public is concerned. The "show season" starts with a lot of fuss and feathers in the fall, shows plenty of life and vigor for a few short months and then retires for another long rest with the close of the big winter shows. After the first rush of the "breeding and hatching egg season" the whole fraternity seems to become afflicted with "sleeping sickness" and drops out of ken of the general public to store up energy for another spasmodic outburst of enthusiasm "next season."

Is that the best we can do? It is not! The books of some of our leading successful breeders show that they do business the year around, they sell eggs for hatching and breeding stock practically every work day of the year. How do they do it? They keep before the public all through the year—keep up their advertising the year around—and do not content themselves with a little spasmodic splurge of space and bid for business during a few short months. They are in the business to do business and they keep busy and everlastingly at it. Some wide-awake manufacturers and dealers are advertising for year around business AND THEY ARE GETTING IT. It has been said that you couldn't keep up interest in poultry shows "out of season," yet one of the most successful poultry shows—one of the best business shows for management and for exhibitors—proved to be an almost continuous summer show. Just as soon as advertisers get out and hustle for business the year thru, and keep good sized ads running every month in the year, then you will see poultry magazines fat up to full size for twelve

months in the year, interest will increase and there will be BETTER BUSINESS FOR EVERYBODY. You can't enthuse and rush for about six months and then drop out of sight and stagnate for the next six months, and hope to accomplish anything worth while. You have to keep pegging away every work day in the year and maybe on some Sabbaths,—tho we don't believe in Sunday work.

The sooner we all forget this "season business" buncombe, that has been stinging us with the sleeping sickness for nearly half the period of our usefulness, the sooner we shall begin to get somewhere and accomplish something in the pure bred poultry business. Why not turn over a new leaf this year—it is not too late now—and start out with a determination to make this poultry business show up as a good legitimate year around business. Keep the advertising space working, make it work every month, every day, in the year. It will do a whole lot to build up your business, strengthen your purse and put a little helpful, healthful "ginger" into poultry interests.

Get busy! KEEP BUSY! STAY BUSY!

VALUES ARE queer things. What one man may value highly another may rate as almost worthless. One of the first things a young doctor has to learn, when he begins practice, is that some families value his services very highly and others "wouldn't have him to attend a sick cat." We have "been there" and we know, and when anyone gets to talking on values of Standardbred poultry, we, somehow, can't help recalling other comparisons of values.

At a recent big show, the first prize pen, in a class of 15 pens, sold for just \$25, or \$5 per bird, and there were some fine pens in the class. The buyer said he bought the pen because he particularly wanted two of the females in it and that he considered the advertising value of the win worth more than he paid for the pen. At the same show a first prize cockerel was sold for \$150, and a winning string of one variety cost the exhibitor over \$2,000.

Exhibition quality Standardbreds may sell anywhere at prices that range from \$5 to \$50 each for females and \$10 to \$100 for males. Prices on single birds to win at certain shows have gone up to several hundred dollars each, the price fixed not only on the bird's value but on the value of the win. Breeding stock prices may range from \$3 to \$25 for males and \$2 to \$20 for females. Any male priced below \$10, or female below \$5, may be good sound utility value stock, but it is pretty certain to have quite a few defects. When the quality price, for a specimen that closely approaches Standard exhibition quality—and remember, none of them are perfect—is placed at \$50 to \$100 per bird, you cannot expect to get everything that the Standard calls for at \$5 to \$10 each.

We have known a record layer in White Rocks to bring \$800 and the buyer considered her worth it. We have known of a good many sales of bred-to-lay, utility stock that brought from \$15 to as high as \$100 per breeding bird,—not on exhibition values, but on what both seller and buyer considered breeding values worth the money.

The great majority of beginners want to buy low priced birds,—we believe largely because they can-

not afford to pay more—and from \$2 to \$10 is about their limit. The biggest demand is for "utility" breeding and laying stock at \$2 to \$3 each. Obviously, if the buyer of such low priced stock gets good, strong, healthy specimens, free from deformities, and fairly represents the characteristics of the variety, he gets all he pays for. We figure that we cannot afford to coop and ship a single bird at less than \$2 and we cannot wash, coop, and ship one bird for less than \$5.

We can get from \$1 to \$1.50 each for most of the birds we raise, from the market poultry buyer, for birds sold live weight, right on the home farm. Females, if vigorous, healthy, and free from deformities,—regardless of breed or minor disqualifying defects,—are worth from \$1.50 to \$2 each when ready to lay—will bring these prices sold just for layers and nothing else.

While values should be governed to a certain extent by the production cost, mighty few folks know what the production cost is or how to figure it, and

as a general rule the selling price is fixed by *what the seller is willing to take and what the buyer is willing to pay*. Better learn to appraise values. Don't expect too much for too little.

How It Looks Over Seas.

WE have no brief to defend or uphold F. E. Harrison. This magazine has kept out of the Harrison-Pennick-Curtis controversy and we do not believe that such "public washing of dirty linen" ever does any good, and we do know that the sort of mud-slinging that has been printed in at least two poultry journals does do incalculable injury to everybody in the fancy poultry business. In spite of the fact that the Executive Board of the American Poultry Association has acted on the evidence presented in the Harrison-Pennick case and that Mr. Harrison still remains a member of the association—which may be presumed to be exonerating him from any suspicion of conduct unbecoming a member—the slurring and mud-slinging continue in

the Curtis reports of the San Francisco convention.

It is not our purpose or intention in this editorial to indorse Mr. Harrison. It is printed in the interest of fair play and to present a letter from an Australian missionary which bears directly on the subject. So far as the personal opinion of the writer goes, Mr. Harrison is no worse and no better than a good many other well known poultry breeders.

From the report of proceedings given in *American Poultry Word* we learn that the Executive Board on Monday, November 15, found as follows:

"That the said F. E. Harrison should reimburse Mr. R. L. Pennick in the sum of two hundred (\$200) dollars as a satisfactory settlement. Both the parties to the case, appearing in person before the Board, agreeing to submit to the decision of the Board as final."

To any fair minded person that would appear to be the right place to stop,—a final settlement agreed to by both parties. Before this report was read to the convention, Mr. Curtis asked that the reading be postponed until he could present a motion referring the case back to the Executive Board to receive additional evidence and hear new witnesses. This motion was voted down. The report was then read. After which Mr. Curtis talked the assembly into accepting a lengthy motion referring the case back to the board for a rehearing. Mr. Harrison said he was willing to have a rehearing, but quite naturally voted against it, at least the report says he did so.

On Thursday, November 18, the following report of the Executive Board was adopted:

"We, the Executive Board, to whom was referred the case of R. L. Pennick vs. F. E. Harrison, for a rehearing, beg leave to report

RED SUSSEX EGGS FOR HATCHING

Mating list will be mailed the 15th of this month. I will be pleased to send you a copy free. Write for it today. My flock is in good condition and strong fertility assured. As for quality, read the following letter from Judge A. H. Emch:

"I sure did spend a pleasant day with you and enjoyed looking over the birds, and am so glad to know that you have so much quality in your flock. Am sure you have the best flock of Red Sussex in America. After one has seen the best the other breeders have, one can see and appreciate the lead you have over them."

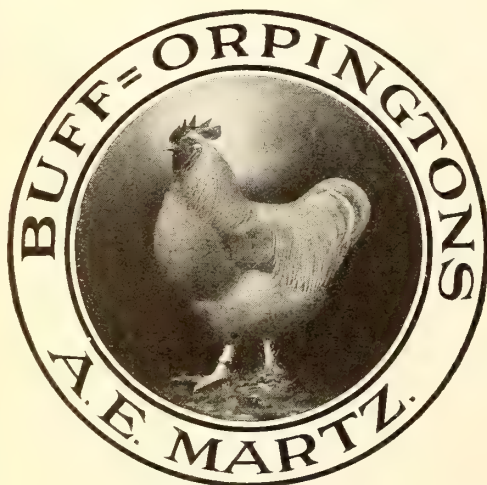

Mr. Emch is a Licensed Judge, all varieties, and has officiated at the Cleveland, Ohio, Richmond, Va., and Madison Square Garden, New York, shows. He is a successful breeder of Red Sussex himself, having won 1st cockerel, with special for color, at the recent Palace Show on a bird of his own breeding; also 1st cockerel, 1st and special pullet at Buffalo. Birds hatched from my eggs last season have made wonderful winnings at the best shows in the U. S. and Canada, and I feel that my matings this year are superior. Send for 1916 mating list, free.

F. L. PLATT

SWANTON, OHIO

Fashion Plate Buffs

Buy one of our \$10 or \$15 cockerels and improve your flock by the introduction of FASHION PLATE blood.

Buy a yearling cock bird at the same price to mate with your pullets and note the improvement in your 1916 chicks.

Pullets or hens, all raised from our trap-nested families, at \$3.00, \$4.00 or \$5.00 each—guaranteed to please or money refunded.

Eggs Eggs Eggs

Send for the new *Fashion Plate Book*; study our 30 matings, articles on trap-nesting, conditioning show birds, dry mash feeding, care of little chicks, etc. 60 pages. Free.

A. E. MARTZ

Buff Orpington Specialist and Judge

Box A

ARCADIA, INDIANA

that after hearing each of the litigants' and permitting them to introduce all matters that they termed new evidence, we beg leave to report that after a careful consideration of the same we exonerate the defendant in this action from the charge of fraud and dishonorable conduct and recommend that he return to the plaintiff the sum of Two Hundred (\$200) Dollars as an equitable adjustment."

Even tho the Executive Board presented this report to the assembly and that body adopted the same,—with the addition of the last four words on recommendation of the president,—Mr. Curtis was not satisfied. Then followed action on Friday, November 19, that certainly appears as a disgrace to the association. Altho the board and the association had accepted this report, Mr. Curtis questioned its validity, demanded to know who was author of it, and finally succeeded, by sheer force of what on the other side of the world is now termed "frightfulness," in compelling a reconsideration of the matter. The case was finally settled by the adoption of the recommendation that "F. E. Harrison return to Mr. Pennick the sum of Two Hundred (\$200) Dollars as a satisfactory settlement of the case."

All that waste of valuable time and money of the association in an attempt to pacify one angry little member with a personal grievance and of whom the officials appeared to be afraid. Afraid of what? We don't know, but there are a good many people who believe that these personal attacks are designed to put fear of what may happen to them

into the minds of other breeders, rather than for the purpose of really making the industry cleaner and better. It is a pity that so much good white paper and so much vital energy should be expended in muck-raking this case and that the "retrial" of the case in public print should continue so long after the convention.

As an example of how this case looks to poultry keepers who live outside our own country, and who read our publications, we present the following letter received from a missionary in Australia:

Editor, AMERICAN POULTRY JOURNAL:—As your books will show, I am a subscriber to your journal. I have read in other American papers things concerning the method of F. E. Harrison in dealing with customers. I should like to state my experience in reference to the above. Some time ago I sent to Mr. Harrison for four birds. I am a good many thousand miles, by land and water, distant from Michigan, but the birds came out of the coop just as vigorous and just as fresh as if picked from the

farm there and then. One of the hens appeared to be bagged down. I wrote Mr. Harrison about this and he assured me that it must have happened during the long journey, which is very possible. In his reply he said that if I was not entirely satisfied he would send me another hen and pay half the export charges. Could anything be fairer than this? Mr. Harrison's methods of dealing and his birds too, satisfy us at this part of the world. This is absolutely unsolicited by Mr. Harrison. Kogarah, Australia. JOHN T. WYNN. November 21, 1915.

The above letter is written on the regular letter head of the "Sidney City Mission, Waterloo and Alexandria Branch", bearing the printed name "John T. Wynn, Missionary," and also his signature in ink.

We have received a number of letters of similar character in reference to this case from various parts of the United States and several foreign countries. It shows that there are two sides to every question and that continued vigor-

Smith's White Leghorns

Win at the World's Fair and Chicago Coliseum, 1915! Only Eastern exhibitor of White Leghorns to get in the money at 'Frisco, November, 1915, and only breeder to win in all classes shown at Chicago Coliseum, December, 1915. The most consistent win of any exhibitor at the Coliseum. Grandest matings in the country for 1916. Catalog telling all about my Leghorns sent free. Eugene Smith, 317 Galena Blvd., Aurora, Ill.

A. A. CARVER'S 1916 Mating List R. I. Reds and Sussex OUT

Contains the greatest lists of winners in the history of Carver's Red Farm. Why not buy this season of the man who mates and grows his own winners? Our last season's egg customers have won in the strongest competition.

Rhode Island Reds

CARVER'S QUEEN QUALITY STRAIN WINS
AT CHICAGO COLISEUM

First Young Pen, Second Old Pen. Also 10 Firsts in Ohio's two big shows—Forest City and Ohio State Fairs. Caesar The Great, also won First N. Y. State Fair, defeating over 50 cocks the season. All above winners grown from our own matings. Our last season's egg customers also report heavy winnings.

CARVER'S RED FARMS

Lock Box 200

Seville, Ohio

Sussex Speckled and Red

Importers from England's Best Sussex Breeder

Now on our farm, direct from England, the Great Champion International Cock King, First Crystal Palace, London, England. At National Sussex Meet, Chicago Coliseum, in tremendous competition—First Young Pen Red Sussex, and 15 Firsts in Sussex alone at the three big fall shows.

Our Sussex customers win at Buffalo, Philadelphia, and other shows too numerous to mention. Will it not pay you to buy of one whose customers Win as well as himself?

A. A. CARVER, Specialty Breeder

Seville, Ohio

Myers' Barred Plymouth Rocks

"LADY BEAUTIFUL" STRAIN,
PULLET LINE EXCLUSIVELY

My winnings, year after year, at the leading shows of America, where the Barred Plymouth Rock Classes are the strongest, show conclusively the quality of my line.

AT THE GREAT HAGERSTOWN SHOW, 1915

My winnings there for three years are history. This year my birds won: Hen, 1, 2, 3; Pullets, 1, 2; Pullet-Bred Males, 1, 2, 3, 4, 5; Championship Special Female, Etc.

C. N. MYERS - Box A - Hanover, Pa.

FIRST PULLET
PHILADELPHIA-Dec. 1913
Owned and Bred by C. N. MYERS Hanover, Pa.

Winners of Five Championship Female Specials at Madison Square Garden, New York, 1914; Philadelphia, 1913-14; Hagerstown, 1914; Williamsport, 1914.

This unapproachable record stands unequalled. It was made at my last five exhibits, competing against all birds in the American Classes.

ous personal attacks upon a man are liable to earn for him a good deal of sympathy and friendship both at home and abroad.

One Successful Boy.

THERE is a sad lack of harmony between some classes of poultrymen. "Tis true, 'tis true, 'tis pity; and pity 'tis 'tis true." Yet, we know there are fanciers who "see red" the moment "that word 'utility'" is mentioned, and utility men who rave even worse at the mention of "fancy poultry." Better understanding among all classes, a disposition to work together for the good of all, and some real, good, honest, harmonious, team work would be better for all concerned.

One of our good friends and correspondents, but a very aggressive "utility crank," dares us to write an editorial that will demonstrate any real utility—useful and worth while—value of purely fancy poultry "some bantams for example." Well, here goes, it always was difficult for us to withstand a "dare."

This is a true story and you can verify it if you wish. We think it shows decidedly useful qualities, or utility values, in bantams in this case. Anything that contributes to the success of a growing boy has utility value. This is the story of a successful boy.

When we were at Owen Farms late last fall we met Clarence Frank Davey, a 13 years. He is the son of the superintendent, Frank H. Davey, who is well known as an expert in breeding fancy poultry and in conditioning them for the shows, and who has a good record as a competent judge. This 13-year-old boy is an ardent fancier of bantams. At the time we met him, he was in the wash room, with sleeves rolled up and wearing a rubber apron. He was washing a Black-Tailed Japanese Bantam hen. While we were there, without assistance from anyone, he put his own string of bantams into condition for a big city show. We were interested and we asked questions. Both Mr. Delano and Supt. Davey assured us that Master Davey attends to his fancy poultry business

himself, without assistance from grown ups. From sales, and winnings of prize money, this boy has put over \$600 in the bank. All made by himself with his fancy bantams. He has kept his bright eyes and quick ears open and he has learned a good many things that it would be good for some grown up breeders to know. He is learning business methods rapidly. He keeps his own checking account in the bank and knows how to, and does, handle it properly. How many 13-year-old boys do you know who can show a business record and training equal to this?

His interest and enthusiasm as a fancier of fancy bantams has given this boy something decidedly useful to do, it has taught him many things well worth while. His boyhood success will help him all thru life and will help him to successful manhood. If that isn't real utility—useful—value from fancy bantams, what is it?

Inspectors and Investigation.

IN our home town we have a most efficient selectman, who is 84 years young, who has served well and faithfully in town, county and state offices for many years, and who, today, has clearer vision and shows more practical activity in matters of public welfare than many of our younger men. He is well posted on agricultural affairs and has had wide experience. In an open letter to delinquent taxpayers, recently, he said in part:

"We are enjoying much at the public expense, in all our towns, which would have been regarded as wasteful extravagance by the people in the memory of men and women now living. To meet these extravagant measures of state, county and town, an unprecedented tax is assessed upon us, heavy and burdensome, and made more oppressive and excessive by the legislation of each year and the consequent increase of the number of commissions and inspectors, who meddle with local affairs to the disgust of every public officer or private citizen. Unreasonable orders are often given by parties ignorant of a business or of local conditions. All this adds to the tax levy and is driving business, cattle and capital out of the state. Already the cattle have been reduced by thousands and dairy men have been obliged to abandon their business on account of dictation of persons not qualified to enlighten the

most ordinary farmer concerning the most common affairs of his calling. The taxpayer has our unstinted sympathy, but we must demand the tax."

We quote the above because there is much in it that concerns everybody and that everybody should think about. Our town is not the only town where such conditions are felt. But, while in large measure we agree with all that our townsman has to say, there is a phase of the matter on which he does not touch. We have to meet present day conditions with present day methods. Our town, and many other towns, is still trying to do business in the old fashioned and now inefficient way. Take our highways for example. Instead of making one good stretch of road, well built and well finished, each year, we patch a little here and a little more there until all the money is gone and our roads are worse than when we started. We still employ taxpayers to do the road work to help them "work off taxes," some of whom have abundant means, and many of whom we would never employ at the same wage per day to do work for ourselves. Everywhere town money is wasted by incompetent and inefficient individuals, who play at politics instead of working for public improvement. We need greater attention to modern business methods in the conduct of our towns. Try to manage any business concern of equal magnitude in the way town business is managed—frequently with new and inexperienced officials every year or so—and it wouldn't take long to put that business concern into bankruptcy. In such cases a competent "receiver" might rescue a town from its own inefficiency. The remedy will probably come in the employment, at a fair wage, of a permanent, competent manager, or commission, to conduct town affairs, just as any business concern would be conducted.

As to inspectors, inspection and investigations, here is a condition where abuses and incompetence are well nigh unbearable. Inspectors that do not inspect. Inspection that is close to blackmail. Investigations that result in whitewashing the rich offender and increas-

REGALS ARE RECORD LAYERS

Regal White Wyandottes have always been a great winning strain, but this alone does not account for their wonderful popularity. It consists in the fact that they stand today as the greatest known combination of beauty and utility. They are grand layers, make rapid growth and are true Wyandottes in type. Mr. M. K. Boyer of Hammon, N. J., is one of America's oldest and best known fanciers. The following letter gives his opinion of the Regals:

My Dear Mr. Martin:

It may interest you to know that I have a pen of Dorcas hens that are doing remarkable laying. I bought them in the fall of 1913, while pullets, from a party who purchased the eggs from you. There were ten of them and for the year beginning November, 1913, they laid 1,920 eggs, or an average of 192 eggs each. This year is not quite completed, but at the rate they have been laying, I know they will not fall far short of repeating their performance as yearling hens.

For the combination of beauty and utility, I do not believe there is a strain in the world that can beat yours.

Respectfully,
(Signed) MICHAEL K. BOYER.

State of New Jersey } ss.
Atlantic County }

Personally appeared before me Geo. E. Strouse, a Notary Public for the State of New Jersey, Michael K. Boyer, who being duly sworn according to law, deposeth and saith, that the above statement is true and correct.

Sworn and subscribed to before me this eleventh day of September, 1915,
(Signed) GEO. E. STROUSE, Notary Public.

2,000 Cocks, Hens, Cockerels and Pullets For Sale, 2,000

SPECIAL—500 beautiful exhibition cockerels and pullets ready now to win the blue ribbon for you. One hundred well matured cockerels from my heavy laying Dorcas line, \$8, \$10, \$15, \$20 and \$25 each. Dorcas pullets, \$3, \$4 and \$5 each. Breeding pens (male and four females), \$20, \$25, \$35 and \$50. Stay white, vigorous utility cockerels, \$3 and \$5 each.

Eggs for hatching, Exhibition Matings, pens 1 to 20 (as they run), \$5 per 15, \$9 per 30, \$12 per 45, \$24 per 100. Dorcas Matings, \$5 per 15, \$15 per 50, \$27 per 100. Special Matings, \$10 per 15, \$18 per 30, \$25 per 45, \$50 per 100. Utility Matings from heavy laying stock, \$9 per 100, \$25 per 300, \$75 per 1,000.

Send one dime for the Regal White Wyandotte book telling all about the Regal Strain. FREE—Send for my 20-page catalog and mating list giving description of all my matings.

JOHN S. MARTIN

Box 51

PORT DOVER, CANADA

ing his profits, but which send the poor man to jail. Just so long as the appointment of inspectors and investigators remains a political matter, just so long will such abuses continue. The country is full of "inspectors" who are "not qualified to enlighten the most ordinary farmer concerning the most common affairs of his calling."

But inspection of all places where food supplies are produced is undoubtedly here to stay. The thing to work for is to have only competent men appointed as inspectors, to make them take a rigid civil service examination to prove their qualifications and fitness, to have them under Federal control, but to keep them out of politics.

It will not be so very long before we have inspectors who will inspect all poultry plants—fancy or utility—and we hope that they will prove better qualified than the kind of inspectors we now have inspecting other live stock. The action of the American Poultry Association at San Francisco, and the frequently repeated broadcast and indefinite accusations of fraud and fraudulent advertising in the poultry business, is certain to start something, and, when it starts, the investigation and inspection is likely to be far reaching. We may, any of us, be called to make a show down as to whether we are breeding with a purpose of bettering and increasing the national

food supply, or simply for the sport of winning ribbons. If the inspection comes, it will call for sanitary measures and healthy flocks, it may even make the keeping of accurate egg records—at least flock records—necessary. When we advertise layers, or any other special feature, the inspection may demand tangible proof. In the matter of many supplies sold to poultrymen it may perhaps demand to know why so many articles costing from 2 cents to 10 cents each are offered to poultrymen at 50 cents and a dollar each, when if the unfortunate was properly informed he could buy such in the open market himself at the low price. It might even attempt to draw a line between what is "pure bred" and what is "mongrel" and, if we are not mistaken, that is a subject that was tackled by Darwin and some other scientists, who were not able to make such classification in regard to domestic poultry.

If, as some would have us believe, we are so much in need of a clean up that a poultry association, representing very considerably less than one percent of the poultry breeders of the country, feels called upon to appoint a perpetual committee and make an appropriation for investigation, then it behooves everybody to put his house in order and get ready for government inspection and investigation, which will surely come.

Personally, we are inclined to believe that much of the agitation for inspection and investigation is born of a political purpose and selfish interest; mostly "much ado about nothing."

Rose Comb White Leghorns Next!

ATTENTION! Breeders of Rose Comb White Leghorns! It is your turn next. We have the following generous offer from M. C. Wilson, breeder of R. C. White Leghorns, Oil City, Pa.:

Editor American Poultry Journal:—You are striking the right chord in your breed article contests. You may announce that I will give as a first prize a trio of my "Beauty and Business" Rose Comb White Leghorns and as second prize a pair of the same, for the best and second best articles respectively on "How to Breed Rose Comb White Leghorns and Why." You to be the judge.

I consider them the breed that comes nearest perfection in both beauty and utility,—vigorous, active, bright-eyed beauties full of vim and business and so like their pictures in the Standard that it takes an expert to tell the difference. The blood of the Australian Laying Contest winners flows in their veins and they prove over 90% non-sitters.

Come on everybody, loost for the Rose Comb White Leghorns! They suit me, how do they suit you? M. C. Wilson.
Oil City, Pa., December 25, 1915.

Mr. Wilson sends with his offer a clipping showing his winnings in a recent show of the Franklin Poultry and Pet Stock Association.

Here is your opportunity, friends of

NAPOLEON

at the zenith of his colossal career
never gained a more complete

VICTORY

— over all his powerful enemies than was gained by —

Halbach's W. Plymouth Rocks

IN THE ARENA OF THE RECENT COLISEUM CHICAGO SHOW

King Champion 2d

IT WAS A BATTLE ROYAL. The Kings, the Monarchs and Rulers in the World of Wh. Plymouth Rocks had marshalled the flower of their forces in battle array at this show, so that it was asserted again and again that never had any show-room in America seen such a magnificent gathering of the truly greatest birds in White Rocks. Chicago this year was without a doubt the stage for the greatest White Plymouth Rock battle that has ever been witnessed by man. It was in this GREAT BATTLE ROYAL that Halbach's White Rocks won such a

Glorious Victory

that it will go down in White Rock history as the greatest, most complete and most decisive ever chronicled. They won—not only one first—not only two or three firsts—but EVERY first prize, except one, in the entire show. **First Cock, First Hen, First Pullet, First old Pen, First young Pen**—and they didn't stop even there—oh no!—but won EVERY second prize in the show down the entire line, except one, and EVERY third, but one. Such a brilliant victory in such a show, where only the best, the very best were in competition with each other means but one thing—that

Madam Snow-drop

Halbach's White Rocks Are Unequaled

WISE BREEDERS will take notice and will study the above with care and with thought. While this strain of birds has been the foremost winner for the past seven years, they have never been boomed and boosted as they should have been—NOW, HOWEVER

THE HALBACH STRAIN OF WHITE ROCKS

will be boomed and advertised as never before. They seem to be the best now being bred anywhere in this wide world and the world shall know it. Every Halbach White Rock is positively guaranteed to please the purchaser or the entire purchase price will be refunded. If you are interested on this basis, write me. A big, beautiful illustrated catalog sent for 20 cents. Keep this in mind

the Rose Comb White Leghorns, get busy and see what you can do. The contest will be decided by the Editor of AMERICAN POULTRY JOURNAL. All articles must be in our hands by March 1st. The winning articles will appear in April issue.

Articles may contain from 800 to 1,000 words and must be written on one side of the paper only. We reserve the right to retain all articles and to publish such as we believe worthy of space. Be sure to tell how to breed them and give reasons why one should breed R. C. White Leghorns.

Send all articles marked "R. C. White Leghorn Contest" to Dr. Prince T. Woods, Lock Box 4, Silver Lake, Plymouth County, Mass. Here is a big opportunity to win either a trio or a pair well worth your effort. Get your articles in early.

More About Day-Old Chicks.

ACCORDING to the thirteenth census, in 1910, there were 5,578,525 farms reporting chickens,—over five and a half million farmer poultry breeders, showing an average of 50 fowls per farm. The average value per fowl was given as 50 cents. For nearly a million more farms no report of chickens was made. Also only farms were reported and no account was taken of chickens on farms of less than three acres or of chickens kept in cities, towns, and villages. The average number of chickens produced on these farms in 1909 was 88 each. The average value of chickens sold was 49 cents. The total number of eggs produced was 1,591,311,371 dozens. The average value of eggs per dozen, as sold, was 19½ cents. The value of poultry raised and eggs produced on these farms in 1909, is given as \$509,195,232. It is estimated that there is an annual loss of \$45,000,000 in eggs which are spoiled or broken before they reach the consumer,—mainly due to the eggs being overheated and partially incubated. Secretary Wilson in 1910 estimated the total valuation of poultry and poultry pro-

ducts for the United States in round numbers at \$750,000,000.

Just bear in mind that that estimate covers only the poultry of farms. It represents 75% of the "billion dollar industry" that we are so fond of talking about. It does not take into consideration the millions of people who keep "just chickens" in cities, towns and villages; probably these poultry keepers will swell the percentage considerably, until we find our little handful of *perhaps* 3,000 active members of the American Poultry Association is a mighty small unit in the "big poultry industry," and most of these farmer poultry raisers never heard of the American Poultry Association and know next to nothing about our poultry journals. Are we not beginning to "feel our oats" and get the "swelled head" a bit, when we attempt, as a poultry breeders' association, to dictate to this vast multitude of poultry keepers what they shall buy or sell as poultry and what price they shall pay? Can we hope to *compel* them to accept our only "recognized breeds and varieties" and descriptions of same? Isn't it possible that in assuming the *parentage* and *control* of the "billion dollar poultry industry" we are making ourselves ridiculous? It might be well to think a bit before the tail assumes the authority to wag the dog. Before now it has been customary with some thoroughbred dogs to cut off, or dock, the tail. The association may become a great power for good, if we get rid of the selfish politics that now control it, but it should first clean house and get rid of the humbug and misrepresentation within itself, before it attempts to clean house for six million or more poultry keepers who are doing just as clean and legitimate poultry business as many of our members. Rather than try to compel this big army of poultry keepers to do things our way, it would be better to set them a good example and have them *want* to do our way *because it is good*.

No one thing that the American Poultry Association has done is more absurd than the stand some officials and mem-

bers have taken against the day-old chick business. Just because some member thinks he is losing hatching egg business or because some other member's incubator doesn't work well, or isn't the success he expected it to be, is no reason for jumping hot foot on the perfectly legitimate and desirable day-old chick business. The hatcheries have come, they have proved their worth and made good and we believe they are here to stay. While there is no practical way at present to take a census of the day-old chick hatcheries, we do know that the business has made surprising growth in the past few years. The demand for day-old chicks, particularly for *low priced* day-old chicks, is simply wonderful. Most hatcheries appear to be giving good value for the price asked, this is proved by the large number of repeat orders they get. One hatchery near us received, last season, *over 80% of its business from old customers*. If it was not delivering the goods that could not happen. While there may be some cases where values are misrepresented and where the customers are lead to expect too much, we don't need to worry about them. Any hatchery that misrepresents its chicks, and that fails to deliver one hundred cents value for one dollar, will put itself out of business in a few short years,—for the dissatisfied customers will place their orders elsewhere and get others to do so too. Such hatcheries as have come under our personal observation are giving better values in pure bred chicks this season than ever before. Why? We believe it is because they realize that they must make good in order to meet competition and stay in business.

Near our home is a hatchery that uses small incubators exclusively. It has about 90 of them, with a total capacity at one sitting of 35,000 eggs. Last season that hatchery ran at full capacity from the last of January until the first of October and could not supply the demand. Eggs were bought from breeders of good stock all about the countryside. We sold that hatchery a good many eggs

Keeler's Vigorous Wh. Wyandottes

FASHION PLATE FOURTH
BRED BY FASHION PLATE 3RD HEAD OF YOUNG PEN INDIANAPOLIS 1915
BRED & OWNED BY CHAS. V. KEELER, WINAMAC, IND.

The Aristocrats of the White Wyandotte World

For 21 years my strain of White Wyandottes has been winning for me and my customers at such shows as Chicago, New York, St. Louis, New Orleans, Kansas City, Pittsburgh, Denver, etc. This is a record to be proud of and you will be getting the benefit of these 21 years of experience and breeding that are back of my birds when you purchase White Wyandottes from me. Have by far the finest and largest lot that I ever reared. Birds that will be the winners at America's best shows this fall and winter and birds that you will be proud to own.

The World's Greatest Strain

My birds not only win prizes but produce satisfactory results in filling the egg basket, laying as high as 265 eggs per year—The prize winning females are selected from among these layers.

Fine head points, wonderful size and shape, pure white, stay-white plumage, broad backs, and well spread tails combined with their wonderful laying ability, their power of reproduction and their habit of winning 1st prizes are the results of careful systematic, pedigreed line breeding. The result of my 21 years of experience I am offering to you at low prices (quality of birds and breeding considered).

2000 — Birds for Sale — 2000

Females, \$5.00 to \$25.00. Males, \$5.00 to \$35.00. Limited number, extra choice of the best breeding, \$50.00 each. Breeding pens \$20.00, \$25.00 and \$35.00. Show Pens \$50.00, \$75.00 and \$100.00. I have no cheap birds—nothing but the best—so please do not write for \$2.00 or \$3.00 birds.

Eggs—Eggs—Eggs—Eggs—Eggs—etc.

The pens that will produce the 1916-17 winners, mated December 15th, and after January 1st am ready to furnish you eggs from the 16 best matings of White Wyandottes in America. 1916 illustrated 64 page art catalog of America's finest White Wyandottes FREE. Send for your copy today. Eggs, \$5.00 per 15; \$9.00 per 30; \$14.00 per 50; \$25.00 per 100. Shall spare a very limited number from special matings at \$10.00 and \$15.00 per 15. State wants definitely and address.

Chas. V. Keeler, R. F. D. No. 11 Winamac, Ind.

ourself at about 15 cents per dozen advance above the market. The hatchery sold "broiler" and "market" chicks at \$8 per hundred, and true to name pure bred chicks at from 12 cents to 25 cents each, according to quality and quantity. That may be "huckstering," but we can't see anything wrong with it. It is a legitimate business and it helps the "poultry industry."

From figures we have concerning two large incubators, successful mammoths, we know of 1,361 hatcheries with a total capacity of 6,964,200 eggs at one sitting, or an average of above 5,100 egg capacity each. These hatcheries alone represent an initial investment of approximately three million dollars and include only a very small percent of the hatcheries in the country.

It is pretty generally known now, that the resolution offered as opposed to the day-old chick business, and making charges of cruelty in day-old chick shipments, at the Atlantic City Convention, was instigated by two manufacturers of small incubators, who feared that the day-old chick business was going to hurt the sale of their incubators. It was sprung at the last minute in hope that it would slip thru before anyone woke up to it. However, it was voted down. It is just the same sort of dirty politics and selfish interest that before now has killed many an association.

So far as the element of cruelty is concerned, the charge is absurd. Properly packed day-old chicks do not suffer any inconvenience during shipment. In fact most of them are benefitted by being kept in a dark warm box without food for from 24 to 72 hours. It is common knowledge that day-old chicks shipped a 72-hour journey will often make a better live and thrive of it than chicks from the same incubator brooded on the home plant. The cruelty charge is only made by selfish interests in hope to deceive the public. The huckstering buncombe is now being handed to us for pretty much the same reasons.

Some people have so little common sense that it is, in a sense, cruel to let them keep any kind of animals or to permit them to buy eggs and attempt to hatch them. But that would not be a good reason for trying to kill the trade in animals or prevent the sale of hatching eggs.

With the exception of five years when we bought no chickens for ourself and did not grow any at home, we have for

21 years been buying day-old chicks in quantities of from 200 to several thousand per season. *We can state positively that we find the purchase of day-old chicks very satisfactory, and that there is absolutely no cruelty in shipping day-old chicks when properly packed.* We have repeatedly seen on our own farm, and on plants of other purchasers of chicks, 50 chickens reared from the 51 to 53 chickens shipped by the hatchery. At no time have we ever known of losses of chicks—chick mortality—being any greater, under similar conditions, than where chicks were brooded on the farm where hatched. Heavy mortality is the *exception*, the unusual case, where day-old chicks are purchased.

Now if there are six million—more or less—poultry keepers who may be interested in the purchase of low priced day-old chicks every season, who is going to forbid them to buy, or forbid honest hatcheries selling chicks for what they are worth? We are against misrepresentation and dishonest dealing in every case, whether it be buyer or seller; but if, as some folks claim, some chicks, as fancy stock, are worth \$2 each,—how in the name of reason can you complain about the sale of good husky, healthy grade, or useful pure bred, chicks sold at 8, 10, 12 or 15 cents each? And bear in mind that we have bought chicks at from 12 to 20 cents each that were just as good pure bred, close to Standard stock as any we have ever seen,—and some of them came from the section of the country where according to the census the farmers produce 55.2% of all the chickens of the country. This geographic section, so reported, includes the states of Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska and Kansas. New England only produces about 2.4% and the Pacific Coast about 3.4% of the farm poultry in this country, yet the average quality of poultry farms the country over is pretty much the same. Though we know that some will dispute it, we believe that the big hatcheries selling low priced chicks, remarkably true to name for the price asked, have done more to put better quality poultry on our farms than any other one influence.

It is just as well to consider these things carefully before we let a few agitators try to wreck the train that is helping us toward more and better food poultry.

DR. WOODS' NOTES AND COMMENT.

FEBRUARY.

Come when the rains
Have glazed the snow and clothed the trees
with ice,
While the slant sun of February pours
Into the bowers a flood of light. Approach!
The incrustured surface shall unbar their steps
And the broad arching portals of the grove
Welcome thy entering. —Bryant.

* * *

Hatching time. Chicks hatched the latter part of this month and in early March will grow well and rapidly if properly cared for. February and March chicks make good June roasters, that sell at a good price. The early pullets will lay well next Fall when egg prices are high.

* * *

If the new board of censors undertakes to censor all advertising—including their own personal advertising—and to investigate all competitors; wonder who will investigate and censor the work of the censors? If Association paternalism is to be the rule—where will the authority come from, or will the committee get its authority from the federal government by special grant? Having supposed, up to now, that a dog wags its own tail—we are interested to learn just how the tail is going to wag the dog.

* * *

What is a healthy, husky, livable day-old chicken worth, regardless of whether it is a mongrel or a thoroughbred—just a good hardy chick fit to grow and live and be marketed? Most folks wouldn't consider 10 cents each in small lots and \$8 per hundred too much to pay for such chicks. The market grower who buys eggs from cross-bred flocks for growing broilers and roasters, averages to pay \$5 per hundred for eggs for hatching. The flush season for eggs is close at hand, when eggs will be plenty and the prices low—except on specially selected hatching eggs. With a good farm flock of utility bred fowls, averaging fairly well in Standard points, and mated to several good males, isn't it better to turn the eggs into chicks to be sold at 10 cents each, than to sell the eggs in the market at 20 cents a dozen or less? With eggs for market selling at 20 cents a dozen or less, isn't it better to sell eggs from such a flock to a hatchery—representing them just as they are—for \$10.50 a case than to lose the extra 15 cents a dozen? If the eggs or

SCOTCH PLAINS

NEW JERSEY

(Established 1873)

EVENTUALLY if wanting the Best Orpingtons, any variety, you will send to their **Originators**. Why not now, and avoid loss and disappointment? Our guarantee of satisfaction is backed by a reputation of 43 year's standing; this means something to you.

Lower prices and better quality than anyone else. How do we do it? By breeding thousands of birds from the best in the world, and having made the Orpingtons, we **KNOW** how to mate for the best results. This knowledge *saves you money*. Advice free.

We have won over fifteen thousand first prizes. Our birds are recognized as the finest layers in the world.

Send for our new 1916 Illustrated Catalog with history of the Orpingtons and hints on poultry keeping.

Eggs from our winners and the finest Orpingtons in the world \$20 a setting; from fine stock at \$10 and \$5 a setting. Ornamental land and water fowl for sale.

Cook's Roup and Worm powder and Laying and Condition powder, at \$1 a box, are recognized as the best.

chicks sold are represented to be just what they are—and if everybody knows or should know that you cannot buy \$2 quality for 10 cents—wherein does such business fail to be honest and legitimate? Such dishonesty as there may be in this or any other business comes from misrepresentation and misbranding of the goods sold.

* * *

Where one keeps pure bred fowls there are usually times in the Spring when surplus eggs, above those needed for sale or use for hatching, must be marketed. There are a good many people who try to buy such eggs at market prices, saying they want eggs for table purposes, when in reality they are trying to buy hatching eggs cheap. In our county we know of two grocery stores—and there are probably many more of them—that regularly check up, sort out and sell for hatching, market eggs which they buy from breeders of pure bred fowl. There is one big wholesale store within thirty miles of us that has regularly sold, at 50 cents a dozen by the case, the market eggs which they have bought every Spring from several specialty farms. Just how to stop this practice, if it can be stopped, is a problem. The grocers claim that, having bought the eggs, they have the right to sell them as they see fit. Our own solution of the problem is to keep a few pens without males to supply infertile eggs for sale as table eggs and to sell our surplus eggs from mated pens to nearby hatcheries at a 15 cents per dozen advance above market egg prices. The hatchery takes the eggs "as they run" and this permits us to use only selected hatching eggs for home use or for sale.

We know that some breeders use a needle to punch large end of egg and tear the membrane of air cell, to prevent eggs from hatching when sold as table eggs. We do not like this plan, as it injures the keeping quality of the eggs, causes them to spoil quickly and may make the eggs unfit for food. We had rather have a few dishonest customers "sting" us, than to have one honest customer feel that we had made "poor delivery" to him. Usually when sharp buyers acquire hatching eggs by such unfair methods it profits them little in the end.

* * *

Some big export shipments of dressed poultry and eggs are being made this Winter. On December 17th the White Star S. S. "Cymric" carried over one million pounds of dressed chickens, averaging 3 to 3½ lbs. each, and destined for the use of "The Allies." Fully as large a lot of dressed chickens were ordered for shipment before February 1st. Two steamers sailing from Boston December 21st carried 3,600,000 "fresh Western eggs;" of which eight thousand cases were carried on the Allan Line S. S. "British Monarch" for Glasgow and two thousand cases on the Leyland S. S. "Colonian" for Avonmouth and London. Total valuation on these eggs was stated as \$120,000, or 40 cents a dozen. In addition to the eggs these steamers carried immense general cargoes, the quantities on both ships totaling: 42,603 bushels of wheat; 89,466 bushels of barley; 42,603 bushels of rye; 600 tons of flour; 350 tons of general provisions; 8,000 barrels of apples; 500 tons of steel; 100 tons of leather; 890 horses and a large list of "sundries."

We believe in Standardbred poultry and in poultry associations and have consistently boosted both and expect to continue. But it does seem to us that a few writers on poultry subjects are taking the matter altogether too seriously and becoming afflicted with Standardbreditis in an incurable form, which will not do them or the Standardbred poultry business any good. There are still a good many good breeds that are not yet recognized by the American Standard. It is customary to develop a breed, organize a specialty club, fix on a club standard, and show the birds, before a breed or variety is considered for admission to the Standard. Just what some of our rabid anti-utility folks, afflicted with standardbreditis, are driving at is difficult to understand. One would think that a few of them believe that they can make it a misdemeanor to breed anything but breeds and varieties that are recognized by the American Standard. Carry that kind of nonsense to its natural conclusion and you will, sooner or later, have some powerful group of specialists saying, "Thou shalt breed but one breed and that must be our breed." You will also discourage the development of new breeds and varieties or the coming back of old breeds. This country is not yet an autocracy like Holy Russia; we are still a comparatively "free people" and hope to remain so. We have a notion that you can probably encourage and induce the poultry loving American public to breed poultry to a Standard, but we don't believe you can compel them to breed only "recognized" breeds and varieties to a Standard that changes, more or less, every few years.

* * *

And that reminds us, that one of our

good friends, an exhibitor for many successful years, a member of the A. P. A. and as good a fancier as they make 'em—is working on a little flock to develop a new and beautiful variety. He doesn't want it generally known yet what it is like and he is only letting a few close friends in on it, because, when he gets them "coming a little better," he intends to "spring a surprise on the boys" at one of the big shows. In writing this we haven't "given away" anything and we don't intend to. However, we hope that the czar of the poultry business won't send this breeder to Siberia for his audacity in trying to develop something new.

* * *

Frank P. Johnson, of Indianapolis, writing for the *Inland* of the San Francisco convention, says: "The Wednesday afternoon session was wholly taken up with discussing the report of the committee on Standard for market poultry and eggs; and while there was a vote taken on the report, it is the opinion of the writer that there is no Standard in sight."

The committee on the "Utility or Market Poultry and Egg Standard" was appointed, we believe, in September, 1911 and made its first report at Nashville convention in August, 1912. It has "reported" quite regularly ever since and various sums have been appropriated to further the work. After the expenditure of more than \$2,000 as "expense" in the interest of a "Utility Standard" for a fancier's organization, it is not very encouraging to be told that "there is no Standard in sight." At the Chicago convention members of the committee left the impression that if the A. P. A.

did not want a Market Standard, which was practically ready for publishing, several members stood ready to publish the book immediately as a private enterprise. What is the matter?

* * *

When we get that "Utility or Market Standard," if we ever do, and also have the regular "Standard of Perfection," will we have a Standard difference between "Utility" and "Standardbred" poultry? If so, what? Wonder if Judge Denny's definition of utility poultry as "fanciers' culls," "roach-backed," "crow headed," "lacking in stamina," and "stock not good enough for exhibition or breeding purposes," will be included in the work. Of course such weakly and deformed stuff never was and never will be utility poultry, or useful, but that appears to be Mr. Denny's idea of the way the term has been applied and we believe he once had a hand in editing the "regular Standard." Funny what "a state of mind" some folks can get into when they get worked up, or want to work up something.

* * *

The Standard says that "removing or attempting to remove foreign color from face or ear-lobes" and the "bleaching of any feather or feathers" is "faking." Any kind of faking debars the specimen so treated from competition in the show room. "Bleaching by means of chemicals" is especially condemned as faking and as a "harmful practice."

Without questioning the "law," after visiting a great many exhibits during quite a number of years, we would like to know just how and where judges draw the line between bleaching that is "natural" and bleaching that is "faking."

Cloth that is naturally yellowish, or that has yellowed by being kept in the dark, will bleach white if wet and placed in the sun. White fowls running to the weather and wet by the rain will bleach whiter when drying out in the sun. If they get too much sun, they sunburn. If they do not get enough sun, they do not show as good white color.

Now, no man can wash a white bird and put it in a light sunny room to dry, without bleaching the feathers. The combination of wet white feathers and the natural chemical action of sunlight will bleach the feathers. If a trace of bluing is used in the last rinse water, the bleaching process is encouraged and skillful conditioners get a better bleach—or as they term it better "condition"—but it is bleaching just the same.

It is said that of two White Leghorn cockerels, one grown on upland and the other on lowland where he can get into marsh—both birds from same stock—the upland male will have fine white lobes, while the lobes of the lowland male will be creamy or washleather color. Put the male into a coop in a dry sunny room and his lobes bleach just as white, in a few days, as those of his brother. That is a natural bleach. If the conditioner rubs those yellowish lobes with a mixture of salt and lemon juice to hasten the process, is he faking?

We certainly believe that bleaching with peroxide or other powerful bleaching agents, which make a change in plumage not at all natural to the fowl, cannot be too severely condemned. On the other hand, after seeing a good many specimens of white breeds and varieties shown "as is," just as they came from the pens, we confess we do not like to see white fowls exhibited

Box M-2, BEREA, OHIO

unwashed. Dirty white feathers are not attractive and an unwashed white bird, in the high lights of an exhibition hall, is not an attractive sight. Yet, if you wash them in water with any good soap, and dry them where it is light, or where they get sunlight, you certainly do bleach the plumage as well as take the dirt out of it. We have read a lot of discussion on the subject of bleaching, but we have never seen any satisfactory explanation of how and where the line is to be drawn between faking and fair practice.

* * *

We all know that cleaners use gasoline to cleanse clothing and so improve or strengthen the natural color of the cloth. It is not so generally known that some exhibitors of parti-colored and dark colored fowls, while they do not wash their birds, do sometimes rub down their feathers with a sponge dampened with gasoline to take out surface dirt and brighten up the plumage. As this is a cleansing process only and does not change the color, it cannot be considered faking. Anyhow the Standard does not mention it.

* * *

However, we have never been able to get a satisfactory decision on what is and what is not faking. When you simmer down all the talk on the subject and get close to the bottom of the brew, you gain the impression that whatever your informant does in the preparation of his birds for the show room, is just "conditioning" pure, simple and undefiled; but what his competitor does, tho it be practically the same thing, is just "rank faking." Tho it shouldn't, the point of view, and the particular shoe that pinches, is apparently what makes the difference. Even the man who breeds them right, grows them right and shows them right, gets accused of faking—generally unjustly so—and we are of the opinion that there is a lot more *talk* about faking than there is actual faking. Most of the talk is inspired by jealousy, envy, and just plain disappointment. The "good loser" is still a rather rare bird, but it sure is a pleasure to meet him.

* * *

At the New York Palace Show Judge D. Lincoln Orr, was passing around a printed circular letter, signed by himself, as follows: "As you are an official of the American Poultry Association. I wish to call your attention to the fact that your licensed judges are ignoring the weight clause disqualification. I wish to ask if you think it right to ignore that clause and then to follow so closely the down between the toes disqualifications, also foreign colored feathers, speck of foreign color on earlobe, and several other foolish minor defects? I am bringing this before you for your honest help, as I feel that a great harm is being done when the law is only half lived up to. Personally I am opposed to all disqualification except deformities."

We have never been able to see the sense or justice of some of the disqualifying defects mentioned in the Standard. Defects that no sensible breeder would, for even a moment, consider as barring the specimen from the breeding pen, ought not to disqualify the specimen. But we do believe that all deformities should disqualify and that diseased specimens should always be disqualified. Good health and sound constitutional vigor ought to count for

more than it does in the show pen. It is a sorry spectacle to see judges trying to dose a bird into fit condition to be judged, when the bird is almost too sick to stand, or to see ribbons on specimens that show chicken-pox, or severe head colds and rousy eyes. Yet, it may be noticed quite often. If a bird, no matter how good, gets sick on the way to the show, or ill from eating his bedding, before being judged; that is a great misfortune for the exhibitor—one which calls for honest sympathy—but the sick bird should not get a place in the ribbons.

* * *

We understand that the A. P. A. is to have an examining board to examine applicants for judge's licenses and that it has also voted to insist upon all licensed judges applying the Standard and obeying the law in making awards. If this is lived up to, it ought to prove a good thing. However, it does very little good to print good resolutions and rules in the "Proceedings," and other literature, and then forget all about the matter. Every law, or rule, good or bad, should be enforced. If when enforced it proves to be a poor or bad rule or law, then it should be repealed or properly amended. Only, to enforce rules or laws it is necessary to have authority. Also there should be equal justice for all.

* * *

Do you like chicken and eggs? We do, any way the Mrs. cooks 'em and there's a variety of ways—simply surprising how many. But we want our eggs "with the cackle on." For breakfast we get them right off the top of the basket that was brought in from the coop the night before. We insist that an egg to be at its best must—when broken—stand right up in the pan and look you right in the eye. If every family would eat eggs and chickens the way our little family of four does, there would be some poultry boom. For the year 1915 we used a total of 104 chickens and 213 doz. eggs right in the home, and not so many visitors either. That represents a total valuation, at cost, of \$131.25 for eggs and chickens. Good wholesome food at moderate cost, that helps to cut down the well-known "high cost of living." Yes, we do like chicken and eggs—the home grown kind—but we don't take kindly to the hotel and restaurant table variety. No embalmed chicken and ancient eggs for us, thank you.

* * *

So much is said in breed articles about the fine tender flesh and good eating qualities of the breed or variety under discussion, that it may be well to say here that fine quality meat and toothsome-ness are not confined to any one breed, but are characteristics of nearly all breeds when properly grown and fed. The manner in which the chickens are grown, the food and the feeding, and particularly the final finishing, have much to do with the eating qualities when cooked. And, by the same token, you can spoil the best chicken ever grown by poor cooking. We have had unusually fine chickens all Summer and Fall—and these have included birds of seven different varieties. So far as breed goes there was no noticeable difference in the quality, or flavor, or juiciness of chickens in good table condition. The Leghorns "went by" quicker than the American or Asiatic birds—by this we mean they did not hold their soft meat condition as long and after

ANOTHER GREAT RECORD

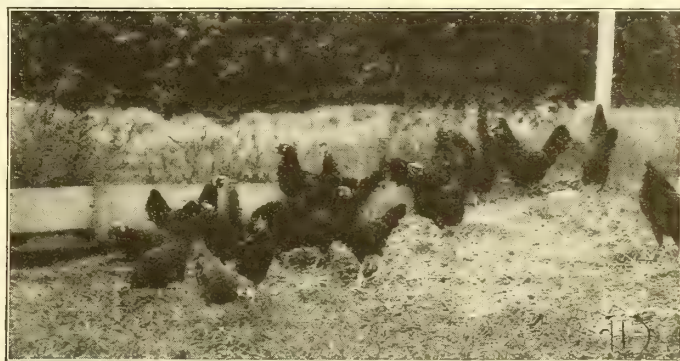

Three Generations of Sheppard's Famous Anconas

Looks Mighty Good, Doesn't It?

These are the birds that are world famed as winter layers. They have the wonderful record of 256 average for a flock. That is why my customers call them egg machines.

The pullets in the picture below were hatched from eggs laid by my birds in picture above, when parent birds were only four months, fifteen days old.

Here are the pullets that laid when four months, seven days old. Their eggs hatched these wonderful youngsters shown below, producing three generations in less than one year, making a record that stands alone.

Sheppard's Famous Anconas are bred to make good, both in the show room and as layers. They have made good for me. They will do the same for you. Stock, Eggs or Baby Chicks for sale. Send for our 86-page catalog which will be mailed upon request.

H. CECIL SHEPPARD, Box M-2, Berea, Ohio

See my ad on opposite page and front inside cover.

LILY WHITE STRAIN S. C. White Leghorns

THE WORLD'S BEST LAYERS

This is our sixteenth year in trapnesting and selecting breeders from high producers of S. C. W. Leghorns. We breed contest layers from our 52 pens of dams with records of 200 to 268 eggs. We can furnish a large number of Hatching Eggs and Day-Old Chicks from these pens. Also have many pens of yearling hens with records from 150 to 200 eggs at prices that will astonish you. Our catalog will tell you how to make them grow and pay. It's free for the asking.

THE MORRIS POULTRY FARM LEBANON OHIO

CHICKS 400,000 FOR 1916

From winners at the largest shows and heavy layers for several generations. Ten times more fresh air goes through our incubators than any other system giving you greatest vitality in chicks. S. C. & R. C. White Leghorns & S. C. Brown Leghorns \$10 per 100; \$5.50 per 50; \$3 per 25. Barred P. Rocks, White P. Rocks, S. C. & R. C. Black Minorcas, White Wyandottes, S. C. & R. C. Reds, S. C. Anconas \$12.50 per 100; \$6.50 per 50; \$3.50 per 25. Our ninth season. Safe arrival and satisfaction guaranteed. **Cleveland Hatchery, 7916-18 West Madison Avenue - Cleveland, Ohio.**

CAMPINES-Blue-Orp's-SUSSEX

Winners at Hagerstown, Frederick, Norfolk, Washington, Chicago and Madison Sq. Garden. If interested, please write me your wants, mentioning breed. Eggs very reasonable.

Dr. J. H. Prudhomme, Desk A, Thurmont, Md.

Cline's White Plymouth Rocks

State Fair winners and excellent layers. Matured, healthy, vigorous birds of good quality at reasonable prices. Eggs for hatching. Write your wants.

Mrs. Walter Cline

Versailles, Mo.

"hardening" they were less tender and the meat dryer. But while still "soft" these little Mediterraneans were fine eating. There is, however, a considerable difference in the eating qualities of individuals in the same variety. We believe that our White Rock cockerels this season ripened better than ever before. They proved unusually fine roasters and were highly commended by all who had them. But one nine-pound cockerel stands out beyond all his fellows. That was the bird we had roasted for Sunday dinner on December 19th. He had been running in the pen with a flock that was being specially fattened and had had about four weeks of finishing. He was just ripe for killing, was dry chilled in a cold room, hung just the right time before going to the cook, and he was cooked just right. We never had capon that was any better than that cockerel—fattened evenly right thru the meat to the bone and plump and well meated all over. Even when finished as cold chicken, not a bit of dryness to the meat and tender enough to almost melt in the mouth. We have some Faverolles, Cornish and R. I. Reds that we expect to have equal that White Rock in table qualities; they show skin and flesh of good fine texture and they are getting the right sort of finishing. The thing that counts is to force them just enough, kill them—after a 24-hour fast—at just the right time, thoroly chill them and let them hang in a cold room for about three days—then it is up to the cook.

* * *

We have some friends who keep poultry but "don't care for chicken except at your house." They complain that their chickens are "dry and leathery." Well, it isn't the fault of the variety, for we have some of the same sort of chickens and our's are soft, juicy and tender meated. It is partly because of the feeding and care and partly because of the manner of killing, cooling and cooking. If you want the best results in the finished product, you have to work for them and do it right all thru the process. We use almost the same ration for fattening as for growing and laying, but it is fed more often and the birds get less exercise, altho they have room to be busy enough to stay in good order. The main thing in feeding is to have them eat plenty but never get "stalled" by overeating at any one time. They should always be eager for rations, but never too hungry and always go to roost with full crops.

* * *

We frequently read about the "dust bath" that "to be effective the dusting material must be very light and dry." While that information dates back a good many years and has been many times repeated—it positively is not true. A "dust bath" should be dust in name only. Light, dry, powdery dust is a very poor thing to have in a poultry house. It makes conditions favorable for and contributes to all sorts of diseases of the nose, throat and lungs. It is a mistaken notion that it is good for fowls to breathe dust laden air. Yet, if you pass an open-front scratch shed on almost any day, you will note the dust rolling out in clouds like smoke. Fowls like a "dust bath" that is a bit moist. Watch them in out-door weather and you will note that they invariably select a "dusting place" where the earth is moist. In open-front houses in Winter they will dig holes in the earth floor for "dusting" purposes, up near the

front where the earth is damp. A good many poultrymen are now using crude petroleum oil, or "hen roost oil," which sells for about 7 cents a gallon by the barrel, to sprinkle floors and lay the dust. On earth floors it is put on with a sprinkler and raked in. Used to take the dry dustiness out of the "dust bath" this crude oil is a good thing and it makes the bath more effective. Use only enough to keep down the dust.

* * *

In small chickens and fowls, more particularly those which are kept housed on board floors or confined in small yards, various forms of neuritis—not infrequently fatal—may be observed. Among the symptoms which indicate disease of the nerves, or of some part of the nervous system, are fits or cramps in chicks, the twisting of the head and neck back upon the body, twisting and deformity of the toes, some forms of leg weakness, trembling jerky walk, paralysis of the neck muscles, paralysis of wings or legs; "the yellows" a term applied where there is alternate yellowing and redness of the face and sometimes of head gear, the yellow color usually being difficult to detect unless the fowl is taken unawares, as startling brings redness; emaciation, either a sudden or gradual loss of flesh; and death, usually following loss of flesh, leg weakness and some form of paralysis.

While these symptoms of nerve disease not infrequently occur in connection with some other disease, particularly intestinal diseases or diseases of the digestive organs, we believe that the prime cause in most cases is *deficiency in nutrition*. Fowls in confinement, and kept on wood, cement, or old dirt floors, are wholly dependent upon the poultry keeper for their food supply. The bird on open range has an opportunity for balancing its ration that the confined bird cannot have unless the keeper is careful to supply the necessary variety. Too much sameness of food, too much carbohydrates; too much much-milled, much-polished and cleaned, cracked grains, that have been kiln dried to preserve them, all tend toward deficiency in nutrition and consequent disease of the nervous system.

All clean, sound, live grains as garnered by the farmer, all fresh raw greens and vegetables and partly cooked fish and meats, all insects, worms and greens obtained on range, contain vital principles—living cells with life giving properties—and such foods, in sufficient variety, will prevent neuritis or disease of the nerves.

A steady diet of screened corn grits, or of cleaned, polished or scoured wheat, if fed to confined fowls or chicks will soon result in putting them out of condition and later bring on symptoms of deficient nutrition. In the outer husk or bran of both corn and wheat are vital principles that are necessary to life of the bird. The confined birds are absolutely dependent upon their keeper for their food supply. That is why it is necessary to furnish a good variety of wholesome food, some meat food and plenty of greens—and the meat food should contain mineral matter (ash) to make up for any deficiency in the other foods.

Oyster shells help out the ration because they contain digestible mineral matter and a variety of nerve and bone feeding elements. Sprouted oats, fresh clover and even cut clover hay contain vital principals and necessary ash. But

BABY CHICKS

OUR 12TH SEASON SHIPPING CHICKS

WE furnish chicks hatched from the best Utility and Exhibition Stock. Our stock all have free range, thus insuring you good strong chicks.

Hatching Eggs and Day-Old Chicks

from the

"Million Egg Farm"

5000 S. C. White Leghorn Eggs per day

1st Pullet, Grand Central Palace, N.Y., 1914

You can get fresh S. C. White Leghorn hatching eggs shipped when you want them from eggs laid in a single day. These eggs are laid on the RANCOCAS POULTRY FARM by choice, selected, fully-matured hens, bred for high egg production. Every breeder of our big, husky Rancocas strain—"The Laying Line"—has the style and finish of Standard Leghorns.

100 Per Cent Fertility. Over 1,100 customers in 41 States bought 146,000 hatching eggs from us last season. This year we can supply 200,000 hatching eggs—everyone with a guarantee behind it of 100 per cent fertility. No orders too small or none too large—all customers get the same quality and service. Don't wait until the rush season is on, but let us book your order NOW.

Day-Old Chicks—Delivery Guaranteed. A live chick guaranteed at your express station for every one ordered. All chicks sold are from eggs laid on our own farm and hatched just like the chicks we keep to supply our own flock. Order early, for even with our enormous incubator capacity and large flocks of layers, we cannot always fill orders unless booked ahead. Order today, and make sure of getting chicks when you want them.

Send today for free booklet, giving prices of S. C. White Leghorn hatching eggs and day-old chicks, produced at Rancocas Poultry Farm—"The Million Egg Farm."

Prize Winners. We breed winners for such shows as Madison Square Garden, where we won first pen February, 1915; New York State Fair, winning the Harriman Cup for best display of Leghorns; Buffalo, winning four first prizes; and winners of high awards at Chicago, Boston, Philadelphia and St. Louis. These winners and others just as good are mated in special pens. Our special mating list gives full description of these winning birds. This booklet is of great value to anyone interested in exhibition breeding. Send for free mating list.

MRS. C. E. CLARK

Route 7

CARROLLTON, ILL.

where hay is given some fresh raw greens or vegetables must be supplied to get best results. To be of greatest value oats should be sprouted where they get sunlight and the sprouts are green. We like them best when the sprouts are less than an inch and a half long. One reason that home ground chick foods generally give better results than the screened and cleaned commercial foods, is that they contain all of the grain and it is fresh ground so that the vital principles are not lacking. If you will bear these feeding pointers in mind and put them into practice, you will have far less of the "mysterious" chicken and fowl diseases to contend with. Deficient nutrition and irritable and inflamed nerves, cause much trouble in confined flocks of all ages and generally pave the way for easy infection with "germ" diseases. This is not only true of poultry but of all animals, including the human animal. How much care and attention do you give to what your flocks eat?

* * *

Frozen or frosted combs and wattles are common at this season, whether you house your birds in closed buildings or those with open fronts. Usually the birds in the closed houses get the worst of it. Freezing of the head gear is largely a matter of poor condition of the bird, and dampness with sudden changes in temperature. Now and then a healthy, vigorous specimen in good order, will get frostbite from undue exposure, especially to freezing winds, but generally there will be no severe frostbite under ordinary circumstances unless the bird is out of condition, from indigestion, faulty nutrition, too much handling, poor cooping, etc. Exposure to severe cold winds when head gear is wet with drinking water—particularly warm water—is a common cause of freezing. For treatment, thaw out the frosted parts by rubbing with cold petrolatum; then apply a mixture of one ounce of sweet oil with one teaspoonful of spirits of turpentine. Apply daily. Do not take the bird into a warm room. Warmth will cause trouble.

* * *

We were talking recently with a market poultry grower who raises chickens and ducks. He said: "I don't care what the price of first feed is, I want the best. The little birds don't eat much of it anyway and the cheapest feed I can use is the one that raises the most birds. In every chicken or duck I can put into the market there is from 30 to 50 cents for me. The losses nearly all come in the first ten days and a dead bird is a dead loss. A dozen little birds saved will pay for a whole lot of feed. When you grow 'em in thousands it counts big. Another thing, profits depend a whole lot on getting all the little birds started right. When I go into a brooder house and see a man taking out dead birds by the hodful, I always think how he is burning up dollars of the season's profits, maybe just because he was trying to save cents on first feed. A feed that will start 'em right is worth all of 10 cents a pound to any grower, and it needn't cost more than half that."

* * *

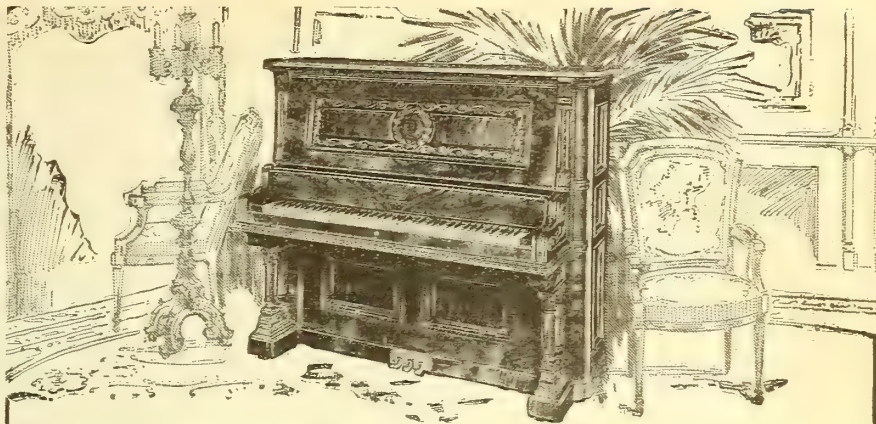

For a good starting food for chickens and ducks, we find that a good many growers are using rolled oats and cracker crumbs, about equal parts bulk, rubbed up moist and crumbly with hard boiled infertile eggs. This is fed sparingly, what they will clean up quickly.

Roller oats are also fed plain and bran is fed in an open hopper. Oat sprouts are fed cut fine, and later the whole sprouted oat is given. Plenty of good oats are believed to be necessary to make good bone and flesh and to give a bird good frame and sound body. Good rolled oats can be bought in 90-pound bags and by the barrel for about 31-3 to 4 cents a pound, and, results considered, are cheap at the price. When one lives near a cracker factory, good broken crackers can be had for about \$1 per barrel, and common crackers can usually be bought anywhere at from \$3.25 to \$3.75 a barrel.

We believe that more chickens and ducklings are killed by spoiled food, and mismanaged feeding, every season than die of disease. Well hatched chicks out of healthy stock are naturally hardy, and they often make a live of it in spite of a lot of abuse and careless handling. Indigestion and defective nutrition kill more young than do germ diseases; in fact, the disturbance of digestive organs is the thing that makes conditions favorable for "germ" invasion. If our experimenters would put more time into explaining the need of wholesome foods, what good foods are and what are unsafe foods, and given more attention to demonstrating how to breed, feed and manage for health—instead of working up so much general alarm about diseases and the "frightfulness" of germs—it would do a lot more good for poultrymen and for the cause of more and better poultry.

When an American doctor cleaned up the plague in a terror-stricken section of China and typhus in Serbia, he did not do it by starting a scare and yowling about disease germs—the people were scared enough already. He just demonstrated common sense hygiene and sanitation. Insisted on burning up those dead from disease; made everybody clean up and keep clean, enforced clean quarters, clean wholesome food and drink, and clean living. Under such conditions the disease had to quit the job and leave, and it did. Use a little common sense.

Edward Brown, in the *Smallholder* (England), has an article, "The Truth about Intensive Poultry-Keeping." He calls it "bird-cage poultry keeping" and says that "despite many trials it has never been known to pay." He believes that "backyarders," who have limited space, do their own work, and consider themselves "compensated by the pleasure obtained" may carry out intensive methods on a small scale with success. Smallholders who simply intend to winter a flock of layers may also benefit by intensive methods, if they keep expenses low. But as a business proposition it is "useless and could never be profitable."

Superb WING Shipped on 4 Weeks' Free Trial

YES, we will ship to you on 4 weeks' absolutely free trial a Genuine highest grade Wing piano **DIRECT** from our own factory, **freight prepaid**. The most surprising—most amazing offer ever made. An offer that puts you on the same footing as the largest piano dealer—and at the very **rock-bottom DIRECT** wholesale factory price! Since 1868—for 47 years—we have been building Wing Pianos, renowned everywhere for their sweetness of tone and sterling merit—and we now make you the greatest of all offers on the Wing, guaranteed for 40 years.

We will allow you to use *any* Wing piano—your own choice of 38 superb new styles in any shade of mahogany, walnut or oak—in your own home for four full weeks at our expense. A Wing Upright, a Wing Grand or a wonderful Wing Player-Piano that plays all the greatest concert and opera selections (you can play it perfectly the first day without taking music lessons).

No Money Down—Not a Cent of Freight

We ask no money down—no security—no deposit in your bank—no guarantee. Just choose any **Wing** from our large catalog. We employ no salesmen of any kind to visit and annoy you. We'll ship the instrument, no money down—**freight prepaid**. While the piano is in your home use it just as if you owned it. Compare with description in the Wing catalog—but note the **rock-bottom direct-wholesale-factory price** is quoted in the personal letter to you. Play the piano—let your friends play it. Examine it carefully—thoroughly—inside and outside. Take music lessons on it if you like. Note the perfect bell-like tone, the remarkable easy regularity of the action, the deep resonance of the bass, the timbre of the treble—note all this—then—At the end of the 4 weeks trial, if you wish, you may return the piano at our expense. We pay return freight to New York. Not a penny to pay for the pleasure of using the piano for 4 weeks. *No salesman to annoy you—you and your friends to judge. Write now for the piano book (free).*

Valuable Book on Pianos Free

The New York World says: "A book of educational interest everyone should own." Would you like to know all about pianos, how they are made, how to judge the fine points of quality and price in buying a piano? Then send the coupon for the piano book which we are sending out **FREE** for the present. You will be astonished at the amount of information about piano quality and piano prices, and how to avoid the deception of the piano salesman. This is a magnificent 136-page book, a complete encyclopedia of the piano; the most complete and costly book ever published on the piano business. Tells you all the making of a piano from start to finish and how to judge the fine points of a piano. We'll send you the book free and prepaid. Also our beautiful catalog showing new art styles and full explanation of our **Rock-Bottom Prices** on Wing Pianos.

Wing & Son (Est. 1868)

Wing Bldg., 9th Ave. and 13th St.
Dept. 3701 New York, N. Y.

So many of the new style Wing Pianos are getting into homes where people buy for all cash that dealers are trying to tell it around that Wing & Son **REFUSE** to sell on time. This is not true. Wyckoff's S. C. White Leghorns

Acknowledged Everywhere the World's Greatest
Laying Strain. Unequalled in Standard Qualities

Remember that we are the **ORIGINATORS** and for 35 years specialty breeders of the justly celebrated **WYCKOFF** Strain of S. C. White Leghorns, the most profitable strain of poultry in America today. Place your orders at headquarters and make no mistake. **EGGS FOR HATCHING** in any quantity from the grandest of matings. Send for catalog and testimonials from satisfied customers from all over the world.

C. H. WYCKOFF & SON

AURORA, CAYUGA CO., NEW YORK

The editor of *Eggs and the Intensive World* (England), vigorously opposes Mr. Brown and says: "The statement 'despite many trials it has never been known to pay' is an absolute and willful untruth."

Mr. Brown says further: "So far as I have been able to learn, no one, either in this country or America, has made such an enterprise successful in production of eggs for market, which is the actual test. Such as have shown a profit have done so by finding an outlet for stock birds, eggs for hatching, and day-old chicks, or by selling their plants to someone else."

Mr. Brown appears to be getting unduly pessimistic. Any egg farm will necessarily—at some time—have fowls to dispose of, and, if chickens are grown

to renew flocks of layers, there will be surplus here to sell also. In the flush season there will be opportunity to sell hatching eggs and day-old chicks at better profit than in selling all eggs for market. These things are all a legitimate part of egg farming. The manufacturer looks after the sale of his surplus, his "scrap" and waste, and by-products, quite as keenly as he does that of his finished product. If he does not, he does not deserve to succeed. Except under favorable conditions there is not very much profit in the exclusive production of market eggs; the production cost is too high compared with the selling price and to date the producer has practically nothing to do with fixing the selling price. Too many people do not know what their eggs cost them,

and many farmers look upon eggs as something to be gotten rid of for whatever they will bring.

Intensive methods have made it possible for a good many blacklottery to get a great deal of pleasure out of poultry and to secure good food for the home table at moderate cost. Large flock intensive methods have worked well in the production of market eggs. Where only a limited amount of land is available, intensive methods permit keeping good sized flocks, if pullets are bought each Fall and kept solely for egg production. Just how well it pays, depends upon circumstances but quite a number of people are making their living, or increasing their income, that way. With all intensive methods, in order to succeed, it is necessary to observe clean-

Get The Brooder of Proven Efficiency

Experiments With Untried Devices Are Costly

The Newtown Giant Colony Brooder—the first successful brooder of this type—has demonstrated by *performance* that it merits your utmost confidence.

Thousands of these wonder-working machines have "made good" in the hands of professional and amateur poultrymen in all parts of the world. Under the widest range of conditions—in all climates—in all types of houses—the Newtown has given universal satisfaction. And *that is proof* that it is best for you, too! The

Newtown Giant Colony Brooder

has been as closely copied by other concerns as patent laws permit. But the imitations are years behind the original. The Newtown still leads and represents absolute perfection in brooding devices.

Why should you "take a chance," risk your valuable chicks in brooders of unknown quality, when you can just as easily get this "sure thing" machine? Remember—the Newtown has passed the most rigid tests—has made good—is no longer in the experimental stage—is the favorite of the men who know.

Some Valuable Newtown Features

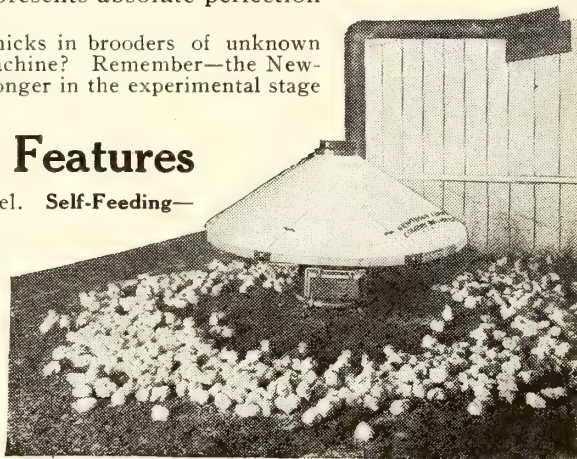

Coal-Burning—uses the cheapest and most satisfactory fuel. **Self-Feeding**—coal reservoir requires filling but once each day or two. **Self-Regulating**—automatically holds the desired temperature. **Safe**—no danger from fire. **Inexpensive to Install**—operates in any building. **Durable**—built for long-time service. **Efficient**—"raises the best chicks, the most chicks, with least labor and at lowest cost."

Your dealer should carry the genuine Newtown. If he doesn't we will ship direct. Write today for big Catalog—FREE.

Market your eggs in the city with

Sefton Egg Shipping Boxes

Parcel Post and Express have brought the city market for fresh eggs right to your door; Sefton Egg Shipping Cases have made it possible to supply the demand. They're strong, light; do the work at the lowest rates.

You ought to have our booklet on express and parcel post for shippers of fresh eggs; helpful—no cost.

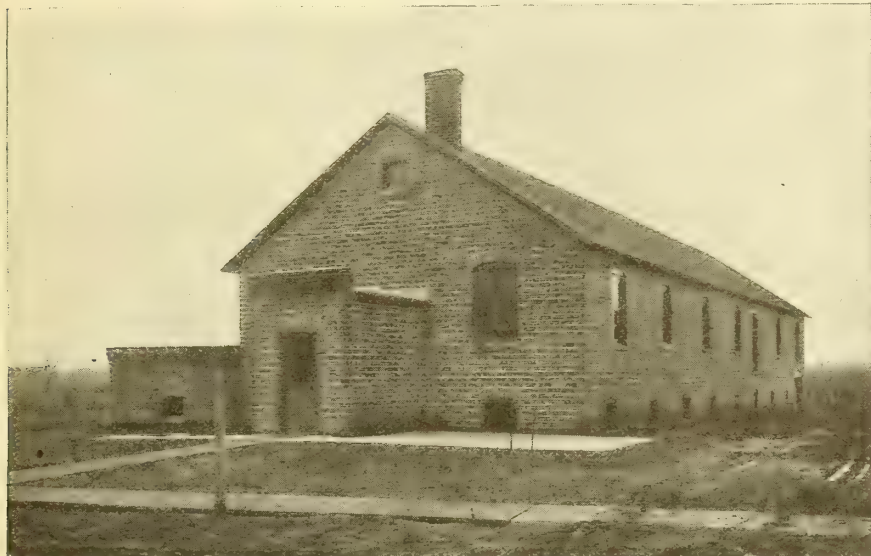

"Ask your paper jobber"

The Sefton Mfg. Co., 1329 W. 35th St., Chicago, Ill.

liness and, where runs are used, to keep the soil well cultivated and frequently cropped. The failure of intensive methods generally results from attempting to breed birds so kept, from continuous use of the same soil without cropping and sweetening it, from uncleanness, lack of sanitary measures, and an attempt to keep stock for too long a time under such conditions. Here, as elsewhere, bad management, is respon-

of intensive poultry keeping are not practical because too much labor is required but there are also intensive methods which effect a saving in labor. Intensive poultry keeping simply means keeping large flocks on a small area. Here, as with other methods, much will depend upon the *individual* who employs it. We prefer farm-range for poultry and an alternation of crops and poultry to keep the soil sweet; but for those

View of the 20th Century Hatchery, New Washington, Ohio. This building is 44x110 feet. The cellar is used for incubator rooms and the second floor is the office and show rooms and storage rooms.

sible for failure. If one is to breed poultry for best results, we do not care for too free use of intensive methods. The stock birds should have farm range for at least part of the year and the young stock should be grown on good range. But if one can secure farm-bred, farm-reared breeding or laying stock each season, or can farm out stock birds thru the Summer, there is no good reason for failure of intensive methods, provided sanitation is good and the management is sensible. Some sorts

who cannot have considerable land area and must be content with small flocks, there is an opportunity to make good use of intensive methods. Where there is the will there is a way, and, where health laws permit, anyone who enjoys working with fowls and who has a bit of land available, who will observe cleanliness and manage well, can get a great deal of satisfaction, pleasure and some cash profit out of intensive poultry keeping on a small lot.

OLD FORGE BUFFS are noted for their wonderful Type, Color and Egg Producing Qualities.
(Satisfaction is absolutely guaranteed)

OLD FORGE POULTRY FARM, SPRING GROVE, PA.

LEGHORNS ARE MONEY HENS

Of all breeds of poultry none will stand the test of record keeping better than S. C. White Leghorns. They are recognized everywhere as the commercial hen. They lay well in winter, and cost little to raise. They produce more eggs and meat per pound of feed than all other breeds. They are winners in all of the egg-laying contests. Among White Leghorns, Yesterlaid Range-Raised Laying-Leghorns are the strain supreme, so recognized by twenty-three State Institutions, and Experiment Stations, which purchased Yesterlaid stock or eggs. All eggs or chicks have ancestral blood records of: Laying at 4½ months—261 eggs a year—443 eggs in two years. Free literature tells why White Leghorns are profitable for farmer, city man and fancier.

YESTERLAID EGG FARMS CO., Dept. 5, PACIFIC, MISSOURI

Again We Lead

At the Great

Madison Square Garden, 1916

We did not exhibit Buff Orpingtons, as our Mr. Rawnsley was judging that class.

Speckled Sussex

WON

1-3 cock, 1-2 hen, 1-3 cockerel,
2-3 pullet, 1-2 pen.

At the Chicago Coliseum, December, 1915

which was the Sussex Club Show of America, we won 1st and 2nd cockerels, 1st and 2nd pullets, 1st old pen, 2nd and 4th young pen, 2nd and 4th cock, 2nd and 5th hen, and Grand Champion Cup best display; cup for best colored male; cup for best colored female; club ribbons for best cockerel and pullet. Winning 76 points in best class Sussex ever shown in America without question.

Limited number high class breeders and show birds for sale. Our egg matings headed by the best line of male birds in America.

Our matings will be headed by the two best male birds in the world—bar none. Our Buff Orpington cockerel, "King of the Coliseum," (a bird we bred and raised), and our Speckled Sussex cockerel, "Tommy Atkins," won champion trophy at Great Dairy Show, England, over all varieties.

At National

Buff Orpington

Club Show, Chicago Coliseum
December, 1915

Here are our winnings on S. C. Buff Orpingtons: 1st cockerel, 1st hen, 1st pullet, 1st, 3rd and 5th old pens, 1st and 2nd young pens.

SPECIALS

Color special for best colored male in show. Grand champion cup for best display, cup for best 3 old pens, cup for best 3 young pens. Winning 74 points all told, and 5 club ribbons. Magnificent, massive, rich Golden Buffs for sale in cocks, cockerels, trios, pens, at "live and let live prices."

Pens now mated containing these wonderful winners. Write us for list and prices, we can serve you.

RAWNSLEY-SHIELDS POULTRY FARM

5173 N. High St. Columbus, O.

Horticulture for Poultry Keepers

Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

IF you have not pruned the aged apple trees, do so this month if the weather will permit. The younger trees, especially those set out last season should not be pruned until just before growth starts in the Spring.

I used to cut back the raspberry canes (the bearing canes) at this time of year, but I do not do so now. I found that if the pruning was delayed until the leaf buds were showing, I got a far better crop. If the later pruning is practical, one can select the bearing wood to advantage and maybe this is the chief virtue of late pruning of the raspberry.

* * *

Senator H. M. Dunlap, the Apple King of Illinois, reports that the last season's crop of apples in his home orchard of 120 acres was 73,890 bushels. Even at the low price of \$1 a bushel, this would mean an average of \$615 per acre net.

* * *

Once in a while we find a man with a large acreage of early apples who is making his orchard pay. W. S. Perrine, of Centralia, Ill., reports that he received from \$500 to \$800 per acre from his Duchess and other early apples. But this orchard is "one in a thousand."

* * *

It is surprising how many old and neglected orchards will respond to intelligent care and treatment. Six years ago Joseph Weston, of Belton, Mo., bought an orchard that was certainly a run down one. The trees were then nine years old and had been given no care whatever. By pruning, spraying and other up-to-date orchard practice, he has put this orchard in shape so that 3,000 trees in 1915 produced 20,000 bushels of No. 1 apples, mostly Jonathan and Grimes Golden. These apples sold for \$4.05 per barrel. Mr. Weston is a city business man. When he started in with this orchard he had "no settled convictions" about orcharding. And because of this he was unhampered in his application of business principles in handling the orchard.

* * *

I like to look out upon the orchard and berry patch these days. There is about two feet of snow on the level and the trees and vines are mulched by this covering which nature has provided. It looks good to me.

* * *

I am greatly interested in your department and always read first what you have to say. I am writing to ask your advice about planting fruit trees in yards for poultry, with runs 20x120 ft. I wish to have a clover sod and would like to know what fruit trees would do well on black sandy soil with sod all around for the poultry, except a space of about 2½ ft. square. My plan is this—I am going to use the Woods' type house 20x20 ft., built 120 ft. back from the road. Next Spring I will plant oats between the road and poultry houses and then seed down to clover. Then the Spring of 1917 I thought I would plant a row of plums, etc., right down the center of the run. What other fruits would do well besides plums cultivated for a space of 5 ft. around them, and what varieties of each kind of fruit do you think would do for

my section (Genesee County, Michigan)? What variety of sweet clover would you recommend for poultry and that would not run all over the farm? C. M. Dutcher, Michigan.

Inasmuch as the runs in which Mr. Dutcher proposes planting the fruit trees are twenty feet wide the trees must stand twenty feet apart, at least one way. This is too close together for most varieties of apple trees. There are two methods which he can follow, either of which will produce good results. The Wagner, Duchess, King David, Yellow Transparent, and Liveland Raspberry apple trees are all upright growers and will be good for his planting 20x20 ft. I would suggest that he plant the Wagner, King David and Liveland Raspberry. There is another way and one which would be as well. Plant Delicious, Baldwin and Black Ben apple trees in these runs. Plant them 40x30 ft. That is, a tree in the center of pen No. 1. Skip pen No. 2 and plant a tree in center of pen No. 3, and so on, placing the trees thirty feet apart the other way. In the runs skipped, plant as fillers the varieties first mentioned. These trees will come into bearing before the Delicious Baldwin and Black Ben varieties and can be cut out when the trees begin to crowd in the future. At that time the permanent trees will be large enough to give sufficient shade to all the pens. I would recommend this second plan. I would not plant more than one of the pens to plum trees. There is no money in plums and the plum curculio is hard to control. In fact the plum should not be planted near apple trees. I do not know why Mr. Dutcher is going to wait until the Spring of 1917 to plant his trees. Why not plant these trees in the Spring of 1916? I would not attempt to maintain a sweet clover pasture for the fowls. I do not believe it can be done where the land is in comparatively small yards. The very best thing for such yards is a blue grass sod.

Mr. Dutcher asks "what varieties of each kind of fruit do you think would do well for my section." Genesee County is not in the most favorable fruit belt of the state. However, the apples as mentioned above will do well there. In cherries, plant the Montmorency. Pears, the Lincoln, Vermont Beauty and Seckel, with a few Keiffers. In plums, Mammoth Gold, America (America is particularly free from brown rot), and Omaha. In grapes, Worden, Concord, Diamond and Moore's Early. In gooseberries, Downing and Houghton. In currants, Diploma and London Market.

* * *

I am a very interested reader of the American Poultry Journal and have watched your department for something that would fit my case. I have lived in town and worked at my trade until three years ago when I moved out on a farm owned by a relative of mine. I liked it fine and did very well for one who had to get experience as he went along. Now this farm has been sold, and as land here is high priced I did not attempt to buy, as I thought it would put me too much in debt. Lately I have been reading

all the literature concerning Eastern farms, especially Southeastern Pennsylvania and Maryland, and I have been wondering if a man, strong and in good health, and not quite forty years old, were to go there and purchase a fully equipped farm, say at from four to five thousand dollars with about twenty-five hundred or three thousand to pay down. Would he, in your opinion, have a chance to pay for it in the next ten years? My idea is an acreage of about seventy-five to one hundred and twenty acres, with at least fifty acres good tillage land and the rest in pasture and possibly some timber. I should expect to do general farming, keep as many cows as I could handle, sheep and a few hogs, and, of course, I would expect to pay especial attention to what was advisable in that particular locality. People here tell me that you cannot raise corn there except a kind of flint and that the land has been fertilized until it does not take effect any more. I cannot quite think that, but would appreciate the advice of an unbiased person. Hence I am asking your opinion.

What part of Maryland is best adapted to general farming and what is the nature of the soil? R. P. Beevins, Ohio.

I think Mr. Beevins is doing well to consider purchasing a farm in the East or Southeast. In my opinion these sections offer more inducements to men situated as Mr. Beevins than do other sections of the country. I feel sure that the next land movement will be east and southeast. The East and Southeast have the best markets of the country at their doors. The soil is adapted to the growing of all grains, and as a grass land proposition they are far ahead of the West. The fuel question is solved very easily, for coal is cheap and timber abundant. Mr. Beevins need not think seriously about the land not being able to raise good corn. It will. There is extra good strong land in Maryland and some poor land, of course. The climate there is delightful and I am sure my correspondent will be able to pay out on a farm there, bought as he says he will buy, should he decide to locate there. I would suggest that Mr. Beevins make a careful inspection of the Piedmont section of Virginia. Personally I prefer this section to Maryland. I believe that the Piedmont section of Virginia holds today more inducements for farmers than any other section of the United States. It possesses about everything one can reasonably desire—magnificent scenery, fine climate, long growing seasons, fertile lands, and abundance of pure, soft water and plenty of timber. For the general farmer and fruit grower, it is a land of promise and fulfillment. Nowhere else in all America do people live as well as they do in this section of the Old Dominion.

The climate of Maryland is mild for the latitude, singularly so in the low-lying Eastern counties. The soils all approach a sandy loam in character. Tobacco, wheat and corn are largely cultivated in the Northern and Middle counties. That portion contiguous to Delaware emulates that state for great crops of peaches and other fruits.

* * *

One of the most profitable apple crops in Northwest Arkansas in 1915 was pro-

Great Crops of STRAWBERRIES and How to Grow Them

A KELLOGG SUPERB EVERBEARING PLANT

Photographed September 15th, lower leaves removed to show berries. 14,000 hills may be grown to the acre. Each hill will produce about two quarts of big, fancy berries. 20 to 30 berries fill a quart box. The price ranges from 30 cents to 45 cents per quart. Fruits continually from June until November. Our free book tells the rest.

Let Strawberries Buy Your Home

THE best asset on earth is a share of the earth. Grow strawberries the Kellogg way and get your share. Strawberries give quicker returns and bigger profits than any other crop. The profit from a single acre of strawberries in a single season will pay for two acres of high-priced land. Many men and women are now paying taxes instead of rent from the profits of strawberries.

Only a few years ago Mr. E. D. Andrews of Lansing, Michigan, was without a dollar. He now owns a fine home all paid for, valued at \$4,000.00. Just two acres of Kellogg pedigree plants—the Kellogg way—that's all. He says so.

At LaGrande, Oregon, Mr. Z. Chandler started with less than one acre of Kellogg plants. In five years that

short acre made him just \$4,390.50. And now Mr. Chandler is paying taxes instead of rent. He sent for our free book, made the try for a home, and won.

These are only two of the many reports that come to us. These men are just common everyday fellows. What they have done you can do if you will make the try. Send for our free book and let us help you earn a productive home.

Kellogg's Everbearers

Kellogg's everbearing varieties fruit continually through June, July, August, September and October. Heavy frost does not check their fruiting. Three months after plants are set you will be picking big, red berries. These plants produce large, fancy berries in great quantities. Many growers are making at the rate of \$1,000 to \$1,200 per acre the same season plants are set. These everbearers will produce more dollars per square rod and do it in less time than anything you can grow. Our FREE book pictures and describes seven of these varieties and tells you how to grow them.

Kellogg's Free Service

When you buy Kellogg Pedigree plants you also get Kellogg's Service. Whether you grow strawberries for home use, pleasure or profit you get full benefit of our thirty-three years of strawberry experience. We never are too busy to answer questions. Our Service Department is on the job six days in the week and 52 weeks in the year. We make big money growing strawberries and we enjoy helping others make money. Strawberry growing offers a grand opportunity. The world is hungry for delicious strawberries. Let us help you satisfy the world's strawberry appetite. Get our FREE book and read the letters from both beginners and old-timers, who tell about the benefits derived through our Free Service Department.

Strawberry Garden

A Kellogg strawberry garden will supply a large family with all the delicious strawberries they can eat summer and winter without cost. You can have strawberries picked fresh from the vines from June until November and canned berries, preserves and jam throughout the winter. Why should you pay a high price for common strawberries when you can grow the Kellogg kind right in your own garden or back yard? Our free book describes garden selections adapted to all soils and climatic conditions and shows beautiful pictures of the Kellogg gardens growing on the home grounds of customers. Get this book and learn how to supply your family free with the most delicious fruit that grows.

Great Crops of Strawberries and How to Grow Them

This is the best book on strawberry growing ever written. Worth its weight in gold. Used in agricultural colleges. Fully explains the Kellogg way of picking two big crops from each acre each year—a big profit in the spring and a bigger one in the fall. Tells how to make rain when the sun shines and how the wonderful Kellogg Pedigree plants are developed on the great Kellogg plant farms in Michigan and Idaho. Step by step every detail of the work is explained in a plain and practical manner. Beautifully illustrated and easy to

understand. You must read this book to appreciate its real worth. You will be delighted with the beautiful engravings of strawberries, strawberry fields and strawberry garden scenes made from actual photographs. This book gives you 64 pages of strawberry facts and 33 years of strawberry experience. A pleasant surprise and something you should know on every page. Get this book and learn the Kellogg way. Make \$500 to \$1200 per acre. The book tells you how. It is FREE.

R. M. KELLOGG COMPANY, Box 325, Three Rivers, Michigan

duced in the orchard of L. D. McClain. He secured 1,500 barrels from 550 trees of this yield but 190 bushels were culls. He sold the entire crop of No. 1 apples for \$2.50 per barrel, or \$3,750 for the entire product. At these figures, each tree produced \$6.81 worth of apples. Of course Mr. McClain took the best care of his trees to prevent insect and scale ravage.

H. B. Rollins, of Wisconsin, who is

C. N. Robinson & Bro., Dept. 66, Baltimore, Md.

thinking of moving to Missouri, wants me to give him the name of some apple grower down there who has actually "made money" in producing apples. There is Dr. C. R. Woodson, of St. Joseph. In 1915, he sold his apples in his large Buchanan County orchard for \$10,000, which he says is a net profit on the crop of 75 per cent. Write to him. He can and will tell you how to make money in raising apples in Missouri.

Still the letters are coming in from gentlemen who tell of the good apples they used to eat when they were boys, but which cannot now be secured. J. E. Ford, of Utah, writes me about an apple "called Pilot, which I used to get in Virginia when a boy and which I think was the best apple I ever tasted." The Pilot is still grown to a limited extent in Virginia, but it is not a commercial sort. It is not considered nearly so good as many other kinds. I think Mr. Ford could raise this apple in the mountains of Utah. He can get Pilot scions by applying to the Virginia State College.

Howard Merrill, of Nebraska, writes for information regarding the proper outfit for evaporating apples, saying he will thus use a part of his crop hereafter. I am unable to give him the desired information. I have no practical knowledge of this branch of fruit disposal. New York state evaporates more apples than any other state in the union. Mr. Merrill can secure all the facts in the case by writing the State Horticultural College at Ithaca.

Since the deep snow which fell a few days ago, the English sparrows are feeding on the buds of the plum trees. The ground beneath two Milton trees is as brown as though carpeted. The sparrows seem partial to the Milton buds. I suppose this is because the buds of this variety are larger than the buds on the trees of other varieties. Of course this work of the sparrows will injure the trees and about destroy the crop for next season, but I know no way to prevent these birds eating the buds. Next Fall after the plum trees drop their fo-

liage I am going to experiment with Sulfocide. I know that when the trunks of fruit trees are painted with a mixture of three parts Sulfocide and one part water, the rabbits will not injure the trees. I am going to spray the plum trees next Fall with the mixture as stated. I believe this will save the buds from the attack of the sparrows. Maybe it will not and perhaps it may injure the buds, but I shall try it on a few trees all the same.

Yesterday the sun shone brightly and the day was as warm as a day in early Fall. The bees were out in force and how they did enjoy this flight. This means that they will be content and able to withstand the several weeks confinement which they will be subjected to, now that Winter is fairly upon them. If they can have three or four flights during the Winter, they will be all right.

I want to urge the planting of more currants and gooseberries. These fruits are very profitable, are easily cared for and the vines are perfectly hardy. They are the most profitable fruits on our place, and altho I have a large planting and have set out bushes each Fall for several years I have never been able to supply the demand at twelve and one-half cents per quart.

In answer to N. S. Gardner, of Minnesota: Yes, Jonathan grafted on a bearing Hibernial will make a good union and the tree will bear abundantly. I am of the opinion that it will not withstand the severe Winters of Northern Minnesota, however. I believe the Northwestern Greening will be valuable for you. Here in Central Iowa and further south it is not desirable. It is giving good crops in Northwestern Iowa. This apple does not do well on the black prairie soil of Iowa, but on your lighter soil it ought to produce well and the fruit ought to be a far better keeper than it is with us. I advise you to plant but few Arctic apple trees. I have four trees of this variety now twelve years set. They have not produced one bushel of apples so far.

Poultrymen! Berries Will Pay Your Feed Bills

Plant your waste spaces to Allen's true-to-name berries. People are always willing to pay top prices for them. Allen's plants are hardy, healthy and heavy-bearing. Many varieties adapted to your soil, climate and markets: Packed fresh for shipment; We have over 300 acres in small fruits exclusively. Our 1916 Book of Berries describes each variety, and tells clearly how to select, plant, etc. 48 pages, 12 plates in natural colors. Send for your free copy today.

MADISON SQUARE GARDEN

MADISON SQUARE GARDEN

POULTRY SHOW

"TWENTY-SEVEN years," so said one of the "old timers" reading the legend in the decoration of flags and bunting at either side of the "Old Garden," and, said he, "I haven't missed a single show, the year wouldn't be quite complete without the Old Garden Show." There is a deal of sentiment about the Madison Square Garden Poultry Show, it has grown to be one of the land marks of the poultry year, and when the rumors come, as they often have, that the Garden is to be torn down to make way for a more modern structure, there are a good many fanciers who feel that they would greatly miss the regular annual meet at the "Old Garden." Madison Square Garden still stands, and it is likely to be with us for many more poultry shows, but when the old building gives place to a more modern and more desirable exhibition hall, as it will some day, it is probable that Garden sentiment and Garden shows will continue.

The 27th annual exhibition of the New York Poultry and Pigeon Association, in Madison Square Garden, New York City, December 31st, 1915, to January 5th, 1916, was much like the shows that have gone before it. The weather was fine and mild. The poultry entries numbered 2909. The attendance, tho not quite up to previous years, was good and the interest shown by visitors was above the average. Secretary-Manager Charles D. Cleveland has reason to feel that his work has accomplished a well-merited success.

There was one feature of this show that we do not believe was appreciated to full value by some of the exhibitors. We refer to the educational exhibit made by the United States Government, the lantern slide lectures, the poultry moving pictures, and the special lectures by representatives of our Agricultural Colleges. This "poultry institute" work was one of the most valuable, helpful and desirable features of the whole show—yet we heard a few short-sighted "fanciers" commenting unfavorably about it. They objected to the picture show and the lectures, because the entertainment in the concert hall "drew people from the floor, where they might, otherwise, have done business and made purchases." One or two of the supply dealers also voiced a similar objection. What "penny-wise, pound-foolish" piffle.

If you only knew it, Mr. Silly Fancier-Dealer, that educational exhibit, those moving pictures, and institute lectures, mean big values to you and to all concerned in every branch of poultry culture and in the trades which make goods to sell to poultrymen. Mr. Cleveland deserves the congratulations of everybody for his enterprise and good sense in securing such a valuable addition and attraction for the Garden Show. It creates and stimulates interest in poultry, helps people to be more successful in poultry culture, and draws people to the show that otherwise might not even consider attending. Why, Mr. Fancier-Dealer, that educational exhibit

Twenty-seventh Annual Exhibition of New York Poultry and Pigeon Association, December 31, 1915, to January 5, 1916.

By Prince T. Woods, M. D.

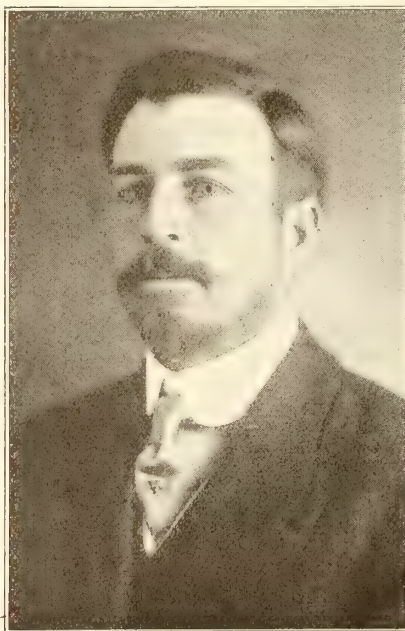

didn't draw customers away from you; it actually made new customers for you, developed new interest in poultry and made new poultry keepers. We attended a number of the lectures, we went three times to see the United States Government's poultry moving pictures, not only because we enjoyed seeing the pictures over again, but also because the interest manifested by the audiences appealed to us, and we wished to study the growth of that interest. Believe us, those poultry moving pictures and lantern slide lectures ought to be shown at every poultry show in the land, and, more than that, in every big Grange meet and in every district school. Such instructive exhibitions will help every legitimate business interest that is in any way connected with poultry culture.

One fancier-breeder sat with us thru the moving pictures, shown by the United States Department of Agriculture under the management of Harry M. Lamon. These movies included a practical demonstration of leg banding, hens working the trap nests, marking the eggs, hatching pedigree chicks in gauze bags to make identification positive, banding and toe-marking the chicks, weighing the chicks, the embryology of

the chick from the first day until hatched, every stage shown clearly in sharp, snappy, practical moving pictures of unusual interest. As we left the hall that fancier-breeder said: "I'm glad you brought me up here, I wouldn't have missed that for a ten dollar bill; I've learned something worth while." The government "poultry movies" have only made a beginning, but it is a worthwhile beginning, and we hope to see the idea grow and develop until we have many more such practical demonstrations in all branches of poultry husbandry and the pictures shown everywhere.

The lecture course conducted by the Agricultural Colleges gave much that was of value and held the interest of large audiences, but some of the talks were a bit over the heads of the people and over-technical and dry for beginners or the average run of poultry show audiences; but there is progress and improvement here that tells of better work and greater interest to come in the near future.

Another great drawing feature was the exhibition of the Bureau of Animal Husbandry, United States Department of Agriculture, in charge of Harry M. Lamon, Robt. R. Slocum and J. Wm. Kinghorne. In this exhibit were shown 23 oil colored enlarged bromide photographs of popular breeds and varieties of poultry. There was also a cooped exhibit of 20 live birds representing pure blooded fowl kept at the Government Experiment Farm, at Beltsville, Md. Each coop carried the name of the variety to which the specimen belonged and a statement concerning the purpose for which it was being kept or bred. In this exhibit were splendid quality specimens of S. C. White Leghorns, Buff Leghorns, Barred Plymouth Rocks, White Plymouth Rocks, S. C. Rhode Island Reds, White Wyandottes and S. C. Buff Orpingtons. An egg testing table, showing, by means of candling, the difference between fertile and infertile eggs, at temperature of 103 degrees, of 24, 36, 60 and 90 hours incubation, was the center of a great deal of interest and had a good crowd of visitors lined up most of the time. Practical working models of the government trap nest, brood coop, colony house and long laying house, together with a fattening battery were shown. These models were all well made in detail, showing manner of construction clearly that an amateur could easily learn how to build. Bulletins were also supplied giving plans and specifications of the equipment shown. Two stands showed 60 colored transparencies—photographs colored and lighted electrically—presenting various views of the Government Experimenting Farm and some fowls bred there. There was also an egg exhibit showing eggs of ostriches, several varieties of poultry, turkeys, guineas, and ducks. And also a display of mounted feathers taken from several pure-bred varieties of poultry. This educational exhibit undoubtedly drew

"RINGLET"

UNRETOUCHED PHOTO

BARRED PLYMOUTH ROCK

FIRST PRIZE PULLET

MADISON SQUARE GARDEN, - 1916.

bred and owned by

E. B. THOMPSON — AMENIA, NEW YORK

This beautiful bird was winner of first Barred Rock pullet, Madison Square Garden, 1916. The unretouched picture tells the story of Thompson Quality much better than a book full of mere words. Go over this picture carefully, friend reader, then you will understand why Thompson's Ringlets have attained the position they now hold in the poultry world. Bred and owned by E. B. Thompson, Amenia, N. Y.—P. K. W.

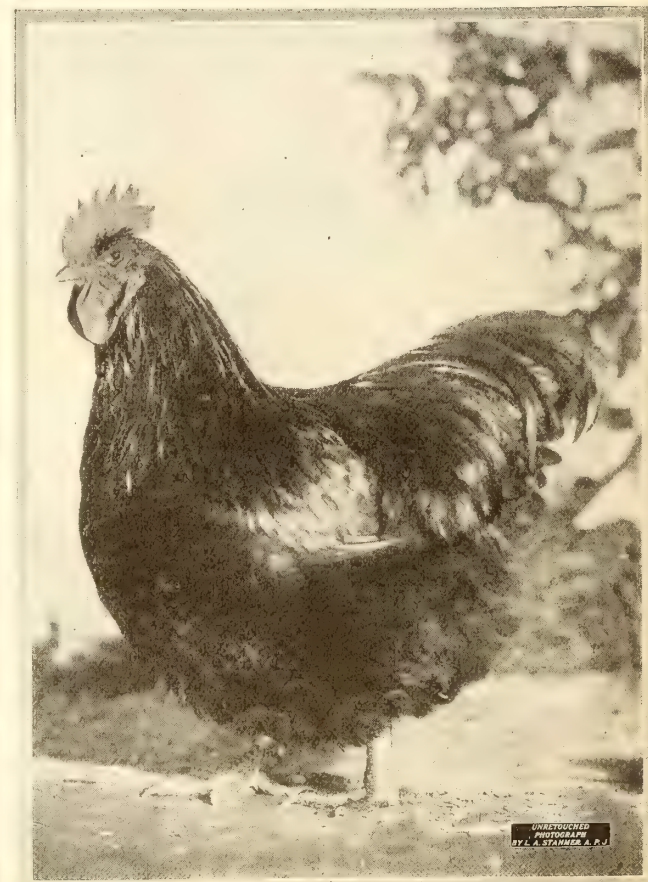

Second S. C. Buff Orpington cockerel, Madison Square, 1916. Good type and color thruout. Owned by Owen Farms, Vineyard Haven, Mass.

First S. C. Buff Orpington hen, in strong class, Madison Square, 1916. Owned by Owen Farms, Vineyard Haven, Mass.

First S. C. Black Orpington pullet, Madison Square, 1916, bred and owned by Foxhurst Farm, Lime Rock, Conn. Without doubt one of the most beautiful specimens of this breed that has ever been produced. —P. K. W.

A magnificent bird and many an admiring eye was directed toward him. As is true with all Foxhurst birds, he has that brilliant green sheen color. Winner of first S. C. Black Orpington cockerel, Madison Square, 1916. Bred and owned by Foxhurst Farm, Lime Rock, Conn.

Bred and owned by
D.W. YOUNG
MONROE, N.Y.

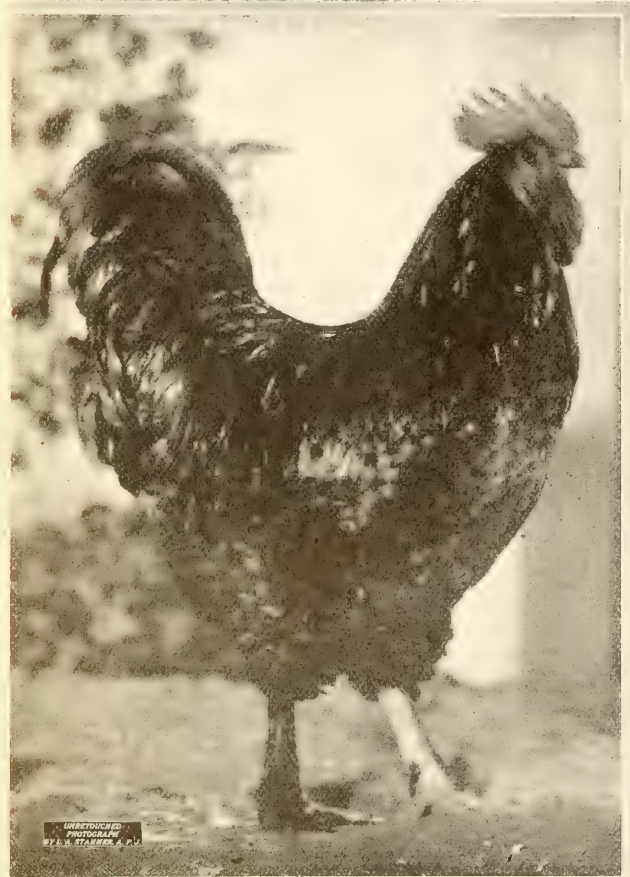

First S. C. Buff Orpington cockerel, Madison Square, 1916. A beautiful bird in every way. Owned by Sunswick Poultry Farm, South Plainfield, N. J.

Male bird from third prize pen, R. C. Rhode Island Reds, Madison Square, 1916. Good type and color thruout. Owned and bred by Harold Tompkins, Concord, Mass.—P. K. W.

Note the large erect well spread tail, characteristic of well bred Black Langshans. His coloring is the perfect greenish black, winner of second cock, Madison Square, 1916. Bred and owned by M. S. Barker, Thorntown, Ind.—P. K. W.

As near perfect as it is possible to breed them, was the comment made on this male bird from first prize pen, Madison Square, 1916, Black Langshans. The females were of the same wonderful type. Owned and bred by M. S. Barker, Thorntown, Ind.—P. K. W.

A true S. C. White Orpington in color and shape. Second cockerel, Madison Square, 1916. Owned by Morris Poultry Farm, Lebanon, O.

First S. C. White Orpington cock, Madison Square, 1916. Strong class, but an easy winner. Owned by Morris Poultry Farm, Lebanon, Ohio.

A winning White Wyandotte male at Madison Square, 1916. Bred and owned by Arthur G. Duston, South Framingham, Mass.

Male bird from first prize White Rock pen, Madison Square, 1916. Females of the same fine type and color. Owned by Rancocas Poultry Farm, Brown's Mills, N. J.—P. K. W.

First White Rock hen, Madison Square, 1916. An easy winner in a class composed of very high quality. Owned by Rancocas Poultry Farm, Brown's Mills, N. J.—P. K. W.

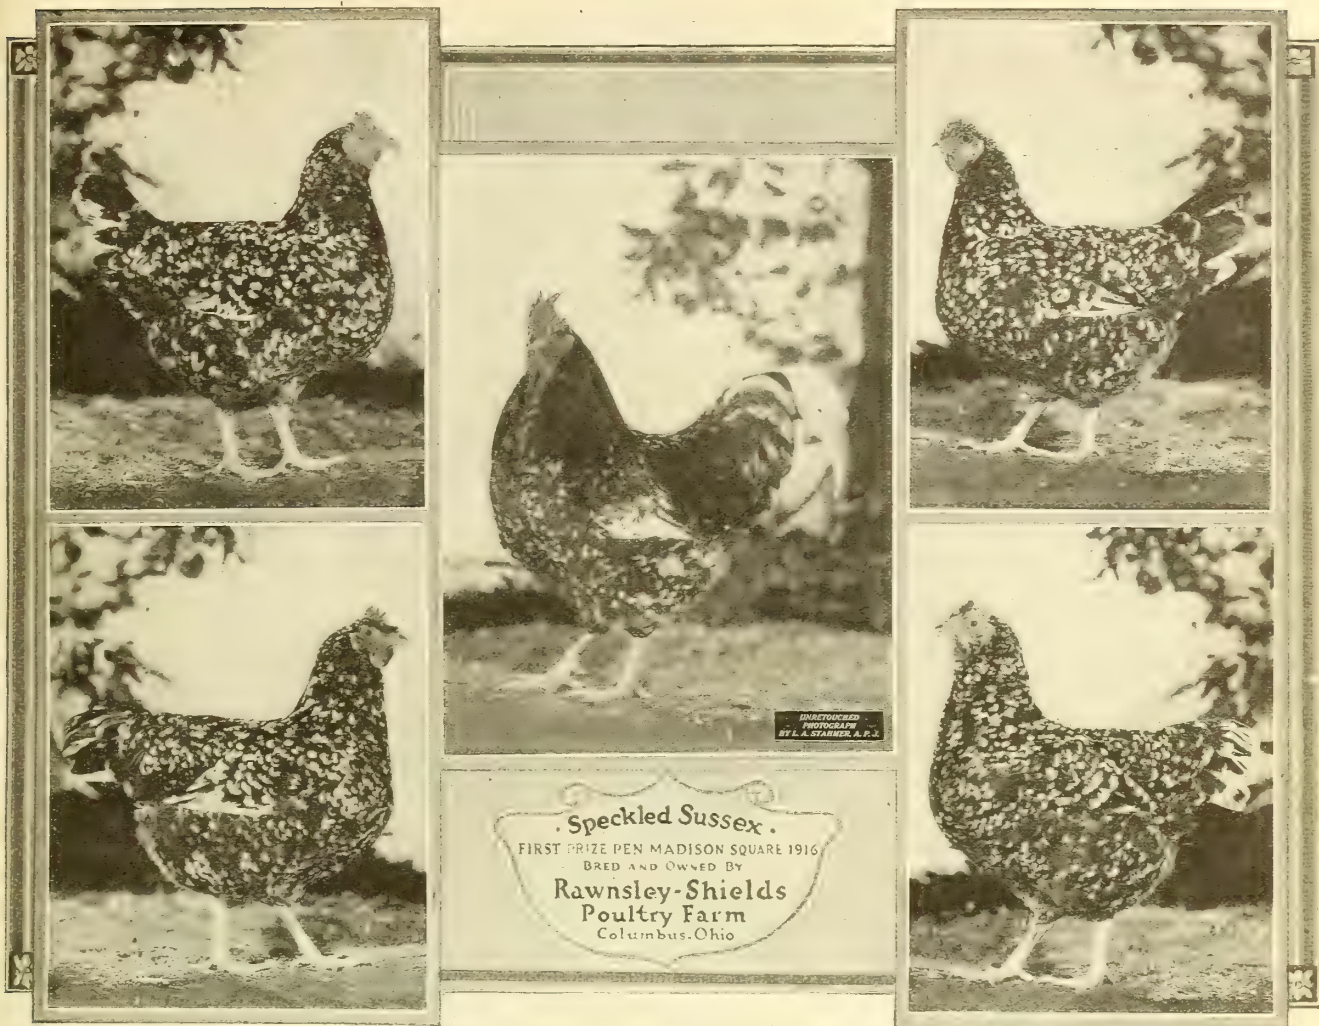

First White Rock hen at Palace Show, N. Y. Type and color perfect, an easy winner. Owned by Bella Vista Farm, Lewes P. Doerhoefer, Anchorage, Ky.—P. K. W.

The exquisite penciling and perfect mahogany brown surface of this first prize Partridge Rock hen was the cause of much comment at Madison Square, 1916. Bred and owned by Bird Bros., Meyersdale, Pa.—

A Speckled Sussex, 1916 Madison Square Garden winner. She also won first pullet at Buffalo. Bred and owned by Rev. W. Berberich, Groton, N. Y.—P. K. W.

First pen Speckled Sussex, Madison Square Garden, 1916. The male bird, as you will note, has a long, broad, flat back, well spread tail, deep full breast, stout thighs. The females have broad deep breasts, perfect five-point combs, long flat backs. In fact, individually and collectively they are the ideal Speckled Sussex, as perfect as any bred in the world. Bred and owned by Rawnsey-Shields Poultry Farm, Columbus, Ohio.—P. K. W.

Madison Square Garden Show.

(Continued from Page 272)

many visitors to the show and it certainly created a wholesome and desirable interest in pure-bred poultry that will not only help to give us more poultry keepers, but will also help them toward success.

The supply dealers and manufacturers exhibits were attractively displayed as usual; in this connection one was certain to notice the considerable increase in the numbers of practical coal-heated colony brooders and the remarkably low prices at which good stoves are now offered; the variety of practical portable houses and coops was also very interesting; in incubator, supply and feed lines most of the offerings were of a practical and useful nature, and the old-time catch penny junk was less conspicuous than in former years. It all tends toward the modern business idea that to stay in business, to do real business and hold customers, one must give one hundred cents value for a dollar.

The displays of wild and domestic water fowl, rare cranes, peafowl, Phoenix fowl, and rare ornamental specimens were very beautiful and interesting—an always attractive feature of the big show. The pigeon department contained 1,014 entries and was one of the big features of the exhibition.

Just why the "poor loser" is always in evidence at the Garden is difficult to understand, but he always—generally several of him—is in evidence annually at this big show. This year was no exception to the rule. It is a great pity that any exhibitor should feel it necessary to take lost ribbons so ill and should pour the tale of his grievances into the ear of any listener. Everybody cannot win. We know who is to judge before we exhibit and, presumably, when we exhibit we show to win or lose on the opinion of the judge. So why not show clean sportsmanship and take our winnings or our losses as they come, and not put up a howl if things fail to come our way? The poor loser, who cries baby over his losses, hurts himself a thousand times more than the loss of the ribbons could possibly hurt him. It is better to play the game and take one's medicine with a smile.

The judges at the Garden were:

W. M. Anderson, Saratoga Springs, N. Y.—Anconas, Buttercups, Lakenvelders and Spanish. W. B. Atherton, Randolph, Mass.—Houdans and Faverolles. Dr. A. T. Beckett, Salem, N. J. (with W. E. Samson)—Silver Laced Wyandottes. Louis C. Bonfoey, Plainfield, N. J.—White Plymouth Rocks. George H. Burgott, Lawtons, N. Y.—Silver, Columbian and A. O. V. Leghorns and Javas. M. L. Chapman, Browns Mills, N. J.—Campines. W. H. Congdon, Oaklawn, R. I.—Feathered Leg Bantams. George W. Dakin, Roxbury, Mass.—White Wyandottes. J. H. Drevenstedt, Buffalo, N. Y.—Cornish; Dominiques; Brown Leghorns and Silver Penciled Wyandottes.

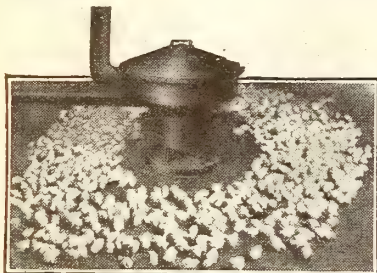

James Glasgow, Mahwah, N. J.—Exhibition and Pit Games, Game and Malay Bantams, Sumatras and Malays. Louis P. Graham, Vineland, N. J.—Barred Plymouth Rocks and Barred Wyandottes. H. B. Hark, Glendale, Ohio—Partridge Plymouth Rocks, Partridge Cochins, Black Wyandottes. J. C. Kriner Stettlersville, Pa.—Water Fowl; Ornamental Classes and Turkeys. W. G. Minich, Carlisle, Pa.—Hamburgs, Polish and Andalusians. J. H. Minshall, London, Ontario—Minorcas. Richard Oke, London, Ontario—White, Blue, Jubilee and A. O. V. Orpingtons. Wallace R. Pierson, Cromwell, Conn.—R. C. Rhode Island Reds. F. L. Platt, Swanton, Ohio—Light Brahmas, Sussex and Dorkings. J. C. Punderford, New York City—Buff Plymouth Rocks, Buff Wyandottes and Black Leghorns. Len Rawnsey, Columbus, Ohio—Buff and Black Orpingtons. Irving F. Rice, Cortland, N. Y.—White Leghorns. T. F. Rigg, Iowa Falls, Iowa—Cochins, except Partridge Cochins, Creve Coeurs, La Fleche, Red Caps, Sultans, Frizzles and any other variety. F. W. Rogers, Montello, Mass.—Silver Penciled Plymouth Rocks, Dark Brahmas, Partridge Wyandottes and Silkies. W. E. Samson, Portlandville, N. Y. (with Dr. A. T. Beckett)—Silver Laced Wyandottes. H. P. Schwab, Irondequoit, N. Y.—Columbian Plymouth Rocks, Buff Leghorns and Langshans. George W. Tracey, Kinderhook, N. Y.—S. C. Rhode Island Reds and Buckeyes. George L. Young, Brooklyn, N. Y.—Clean Leg Bantams. J. F. Van Alstyne, Kinderhook, N. Y.—Columbian and Golden Wyandottes.

Barred Plymouth Rocks, remarkable quality, fine type and snappy barring in all classes: 20 cocks, 17 hens, 34 cockerels, 15 pullets, 5 pens.

White Plymouth Rocks, quality variable, some unusually fine specimens and a few that were too long in head or

ACT QUICK!

You cannot afford to spend your good money for brooding or incubating equipment until you have read our literature explaining the chick, labor and cost saving advantages of the new, truly automatic

Duplex Brooder Stoves and Incubators

They have wonderful new features. Our improved burner is a wonderful fuel saver and is as safe as a stove can be. Our perfect automatic heat control, the perfect system of warm air automatic ventilation in both brooder stove and incubators are worth investigating. The Improved Duplex can be operated with less labor, is perfectly reliable, and costs less to operate than any brooder stove on the market. Don't take chances with slow burning fuel and its attendant danger of gas and fumes. The Duplex can be installed at a less cost and will give you better satisfaction.

Sold under Thirty-Day Free Trial Guarantee

Free Booklet. Don't install any equipment before you read this booklet. It explains colony brooding in detail; why it is so successful; why the Duplex eliminates white diarrhoea; has valuable information about Duplex Incubators. Write us a letter, telling your plans, and we will give you a personal letter inclosing building plans and other information you may want. It's free. Write today.

DIAMOND CORN GLUTEN MEAL

FOR a profitable egg yield, hens must have more protein than straight corn or grain can supply. You want an *available protein* and a *low-priced protein*.

Protein from corn — a natural poultry-food source — is far more digestible, hence more available for hens than the protein in beef or packing-house scraps—also it costs much less.

Diamond Corn Gluten Meal is the most concentrated and lowest priced corn-protein on the market. Guaranteed 40% protein, 1.5% fat, 4% fibre.

This is the reason that Diamond Corn Gluten Meal is the chief ingredient in the feeding formulas used by successful poultry men.

Mix Diamond Corn Gluten Meal with your low protein starchy grains for a month. Watch your egg yield and be convinced.

Write us for feeding formulas.

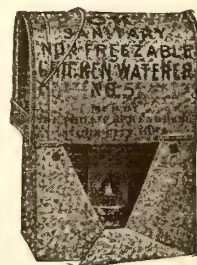

If your dealer does not carry Diamond Corn Gluten Meal write us and we will instruct you where to get it.

PHILLIP BERNARD CO.

2501 Floyd Avenue

Sioux City, Iowa

Second pen, S. C. Rhode Island Reds, Madison Square Garden, 1916. Consider there were thirteen pens entered and you can judge what quality this pen represents. The male was a brilliant rich red with perfect undercolor. Females good color, excellent type and uniform. Bred and owned by I. W. Bean, South Braintree, Mass.—P. K. W.

S. C. Rhode Island Reds, some remarkably fine birds shown, one of the leading quality classes in the show and evidently one where condition counted large in the judging; 30 cocks, 24 hens, 36 cockerels, 31 pullets, 13 pens.

R. C. Rhode Island Reds, some remarkably fine specimens both in and out of the ribbons; 21 cocks, 12 hens, 26 cockerels, 18 pullets, 6 pens.

Buckeyes, 2 cocks, 1 hen, 1 cockerel.

Light Brahmas a strong showing of good quality; 15 cocks, 15 hens, 18 cockerels, 17 pullets, 7 pens.

Dark Brahmas, some good old fashioned quality here; 4 cocks, 6 hens, 5 cockerels, 5 pullets, 2 pens.

Buff Cochins, excellent specimens of the big full feathered type; 3 cocks, 2 cockerels, 2 pullets, 2 pens.

Partridge Cochins, quality good; 4 cocks, 6 hens, 4 cockerels, 5 pullets, 1 pen.

Black Langshans, some remarkably good quality with fine type and color; 7 cocks, 6 hens, 4 cockerels, 4 pullets, 5 pens.

S. C. Brown Leghorns, one of the fine quality exhibits of the show where type and color was unusually good and where some of the winning specimens were pretty close to the ideal; 11 cocks, 12 hens, 11 cockerels, 18 pullets, 3 pens.

S. C. White Leghorns, a truly remarkable exhibition of uncommonly fine specimens, classes where good sports-

manship was displayed and where there were a few incidents noted by us that demonstrate that men can be generous and good fanciers in the stress of hot competition; 18 cocks, 21 hens, 21 cockerels, 26 pullets, 14 pens.

S. C. Buff Leghorns, some fine colored specimens here both in and out of ribbons; 15 cocks, 15 hens, 14 cockerels, 17 pullets, 7 pens.

S. C. Black Leghorns, good type, good color and fine shank color; 2 cocks, 5 hens, 4 cockerels, 3 pullets, 1 pen.

S. C. Silver Leghorns, good in type and color; 1 cock, 3 hens, 1 cockerel, 2 pullets.

R. C. Brown Leghorns, excellent quality; 4 cocks, 4 hens, 2 cockerels, 6 pullets.

R. C. White Leghorns, 2 cocks, 3 hens, 3 cockerels, 3 pullets, 1 pen.

S. C. Black Minorcas, general quality all thru the exhibit was excellent, except for a few knock-kneed males, all specimens showed fine type, color and quality; 25 cocks, 24 hens, 21 cockerels, 21 pullets, 8 pens.

S. C. White Minorcas, R. C. White Minorcas, S. C. Buff Minorcas, and R. C. Black Minorcas, small classes with very good quality.

White Faced Black Spanish, 4 cocks, 4 hens, 3 cockerels, 4 pullets.

Blue Andalusians, quality excellent; 7 cocks, 10 hens, 9 cockerels, 11 pullets, 2 pens.

S. C. Anconas, pronounced by judges one of the best exhibits ever cooped at the Garden; 13 cocks, 13 hens, 21 cockerels, 13 pullets, 8 pens.

R. C. Anconas, quality better in females than in males; 7 cocks, 6 hens, 7 cockerels, 6 pullets, 3 pens.

Silver Campines, quality excellent, 9 cocks, 7 hens, 14 cockerels, 9 pullets, 5 pens.

Golden Campines, 2 cocks, 4 hens, 3 cockerels, 5 pullets, 1 pen.

S. C. Buff Orpingtons, some splendid quality; 15 cocks, 22 hens, 22 cockerels, 20 pullets, 11 pens.

S. C. Black Orpingtons, some splendid birds; 5 cocks, 7 hens, 8 cockerels, 7 pullets, 1 pen.

S. C. White Orpingtons, a very fine exhibit of good type and quality; 15 cocks, 21 hens, 17 cockerels, 15 pullets, 8 pens.

Blue Orpingtons, some splendid color and fine type; 10 cocks, 16 hens, 6 cockerels, 8 pullets, 4 pens.

Small exhibit of R. C. Buff, Black and White Orpingtons.

Silver Gray Dorkings, some splendid specimens of good type and color; 4 cocks, 2 hens, 2 cockerels, 5 pullets.

Colored Dorkings represented by 1 cock and 2 hens.

Dark Cornish, good quality in type, color and size; 8 cocks, 9 hens, 10 cockerels, 5 pullets, 3 pens.

White Cornish, 4 cocks, 4 hens, 3 cockerels, 3 pullets.

Speckled Sussex, some excellent type, size and color; 6 cocks, 12 hens, 12 cockerels, 17 pullets, 4 pens.

Light Sussex, one in each class.

Red Sussex, 4 cocks, 4 hens, 2 cockerels, 4 pullets, 2 pens.

Polish classes small but quality good.

Blue Crowns, 4 specimens shown in each single class, a variety with good color, with coarse comb of "crown" shape.

Golden Spangled Hamburg classes

small. Silver Spangled Hamburg classes of good size and quality excellent. Golden Penciled Hamburg classes fairly filled and with some excellent quality. Silver Penciled Hamburgs small classes. Blacks also small classes.

Mottled Houdans and White Houdans, small classes with excellent type and quality. Blue Houdans, small classes.

White Faverolles, some good type, size and color; 4 cocks, 8 hens, 5 cockerels, 6 pullets, 2 pens. Small classes of Salmon Faverolles and Buffs.

Buttercups, show improvement in type and color, 3 cocks, 5 hens, 7 cockerels, 6 pullets, 1 pen.

Lakenvelders, some excellent quality; 3 cocks, 4 hens, 6 cockerels, 6 pullets, 1 pen.

Turkeys, ducks, geese, Games, bantams and pigeons represented by ample variety and excellent quality.

Complete list of awards follows:

BARRED PLYMOUTH ROCKS — E. B. Thompson, Amenia, N. Y., 1-2-3-4-5 cock, chl, plt, exhibition pen, 2-3-4 hen; C. N. Myers, Hanover, Pa., 1-5 hen.

WHITE PLYMOUTH ROCKS — Walter

E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

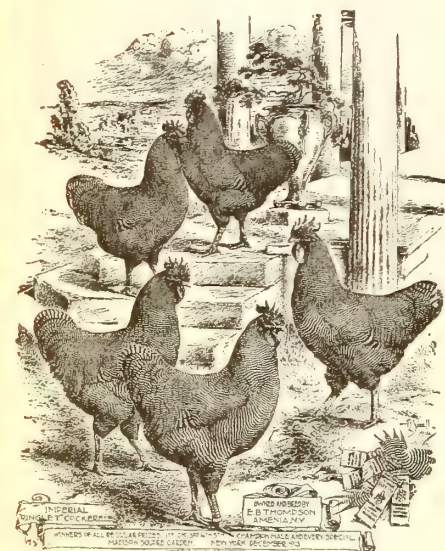

At the Premier Show of All the World

Madison Square Garden, New York
Dec. 31, 1915 — Jan. 5, 1916

set a new and supreme standard of winning with a performance record never approached—this record shatters all traditions. (See Back Cover Page.)

The test of quality is the show room and the Supreme Test is Madison Square Garden. It is at this show—and this show only—that the best Barred Rocks in America are exhibited. The Imperial "Ringlets" have an unbroken calendar of successive victories at New York for more than a quarter of a century, winning more than 3 times as many 1st Prizes as any competitor—mark this fact.

Their record the last four years in succession, 1913, 1914, 1915, 1916, is the climax of these unprecedented victories.

The five Cockerels winning Champion Male and all the Ribbons on Cockerels, viz: 1st, 2d, 3d, 4th and 5th Prizes, at Madison Square Garden, New York.

Winning three times as many First Prizes as all competitors combined—every Silver Cup—All Prizes offered on cockerels, viz: 1st, 2nd, 3rd, 4th and 5th, three years in succession; Sweepstakes Champion Male four years in succession; Both Sweepstakes Champion Male and Sweepstakes Champion Female three different years.

I am the only Barred Rock breeder who has won **Every First Prize Offered**, all prizes on Cockerels and all prizes on Pullets, viz: 1st, 2nd, 3rd, 4th and 5th, within the four walls of Madison Square Garden. The Imperial "Ringlets" have won final ownership of every Silver Cup and Trophy that has ever been offered at New York to be won three times—Among them are the **\$100** Challenge Trophy and the **\$100** Association cups.

PRIZES AND SILVER CUPS

have been won by my customers on the Imperial "Ringlets" in more than a thousand show rooms thruout the civilized world—You can win the same laurels.

I will sell you grand exhibition and breeding birds, Cocks, Cockerels, Hens, Pullets and Pens of this richest First Prize Sweepstakes New York blood, mated to produce Prize winners and eggs from the World's Best Matings.

E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks

Are Recognized Thruout the World As
the Leaders of All the Barred Rocks

You Are Now Thinking About Eggs to Produce
the Silver Cup and Blue Ribbon Winners
for Next Season's Shows.

Think of the great satisfaction of winning prizes on birds you raise with your own hands, from the time the chick first sees daylight until the Blue Ribbon hangs on the coop in the Show Room. The delight of winning on a bird you owned all its lifetime cannot be described.

**My Imperial "Ringlets" Will Put You In a
Position to Win at Next Season's Shows.**

You may raise a single chick worth hundreds of dollars and capable of winning in the strongest competition—Hundreds of my customers have done this.

My Matings Cannot be Equalled in Their High Quality and First Prize New York Blood Lines

They are the Finest in all America. In my Imperial "Ringlet" eggs you get the best First Prize Sweepstakes New York blood which you must have to win in the strongest competition. You will share with me and have an equal chance of producing the highest quality First Prize birds of the year. The Imperial "Ringlets" have a distinct type, color and barring—their color is one even blue shade and barring, is evenly spaced, narrow and straight across the feather to the skin—they stand out in pattern from all others.

My Eggs Are the Best that Money Can Buy—They Produce First Prize Birds

Mr. E. B. Thompson.

Dear Sir:—Just a few lines to let you know what the Imperial "Ringlets" have done for us in the show room this last fall and winter. The Mountain Poultry and Pet Stock Association, of Kane, Pennsylvania, held their show last week. We had 28 birds entered and they were admired by everyone as well as by the Judge; in prizes we took 1st, 2nd, 3rd, 4th and 5th Cockerel; 1st, 2nd, 3rd, 4th and 5th Pullet; 1st, 2nd and 3rd Pen; 1st and 5th Hen; 3rd Cock; Special for Best Pen in Show and Best Hen in Show, also a Special Silver Cup for Best Display in American Class. At McKean County Fair and Johnsonburg Show they won the Blues also. These birds are all from the stock we raised from the eggs we bought of you in the spring of 1914. We have some promising youngsters from the eggs we got of you last spring, too.

Wilcox, Pa., January 11th, 1916.

Yours respectfully, Nelson Bros.

Plainville, Ind., Jan. 3rd, 1916.

Mr. E. B. Thompson.

Dear Sir:—I will write and let you know that the Imperial "Ringlet" cockerel that I bought of you in December won First Prize at Plainville and Odon, Ind., and from the eggs I got of you last spring I raised seven pullets and seven cockerels; won 1st and 2nd Pullet; 1st Pen; 2nd and 3rd Cockerel. Kindly quote price on one setting of eggs from your best cockerel mating pen.

Yours truly, Fred Lawyer.

I Will Help You to Greater Success and Larger Profits

Richly Illustrated Catalog Upon Request.

EGGS from the finest exhibition matings in all the world,
\$10 per setting; 4 settings \$35; 100 eggs \$60.

A Hatch of Chicks from Imperial "Ringlet" Eggs

One Dollar BOOKS YOUR Order For "Better-Hatched" Chicks

90,000
FOR APRIL DELIVERY

We can still book a few thousand for latter part of March—to get them at this time you must act quickly as we have 60,000

chicks sold; nearly all to old customers, who began to place their orders last August. One customer says:

"I have bought S. C. White Leghorn chicks for several years. The last four years I have bought your 'Pay-streak' strain, they have the others all backed off the map. Its eggs I want, and they deliver the goods." We cannot help but believe his statement, as he ordered 3,000 "Pay-streak" White Leghorns for 1916. Another says: "One of your 'Pay-streak' White Leghorns laid at the age of 116 days." Think of it! Less than four months. They get the profit habit early. Another one: "I kept fourteen pullets from the twenty-five White Wyandottes I bought of you last March; one laid her first egg when four months and twenty-seven days old; one laid at five months and four days; one at five months and ten days; they laid 206 eggs in November. Money couldn't buy them." We showed five White Wyandotte pullets at the Shelby, O., show in December, they scored 95¼, 95, 95, 95, 94½. Needless to say they got the ribbons, as well as 1st pen, 1st and 3rd cockerel, and special for best ten birds in show. Good enough for any one, are they not?

WE MAKE A SPECIALTY OF S. C. WHITE LEGHORNS AND BARRED PLYMOUTH ROCKS IN 500 AND 1000 LOTS

We also breed and hatch, S. C. Brown Leghorns, S. C. Buff Leghorns, White Plymouth Rocks, S. C. Black Minorcas, White Wyandottes, S. C. and R. C. Rhode Island Reds, S. C. White and Buff Orpingtons. These are shipped in lots of 25, 50, 100 and up.

We have a hatching capacity of 100,500 eggs and have shipped over one million chicks with not one dissatisfied customer.

A complete description with prices in our catalog—It's free.

Strong, Healthy Baby Chicks, or Eggs For Hatching — White Wyandottes

Our White Wyandottes are utility birds and are not like some so-called utility stock that consists of birds culled from flocks raised for exhibition purposes only. If you want stock that will lay well you must breed them for that purpose.

Come and see these birds or write for catalog giving list of matings, records and prices.

ROCKY FORD, COLO.

Give the chicks a Feed they can digest

A chick needs no food for the first 48 hours. Nature gives him that much of a start. But at the end of that 48th hour he's got to get hold of something he can digest *quick*.

That's where H-O Steam-Cooked Chick Feed comes in. It's made up of selected grains, steam-cooked to insure easy digestion by the youngest chicks. It builds bone and tissue right from the first minute.

H-O Steam-Cooked Chick Feed

actually saves chicks' lives. Easy to digest because **steam-cooked**. Keeps sweet and in prime condition, because it contains little moisture.

Try H-O Steam-Cooked Chick Feed on this year's brood. See how it increases your poultry profits for the season.

Write for free sample, prices and descriptive folder.

Winners at the Great Chicago Show, 1916, the
largest show ever held in Chicago.

Easling Wins Again

and not only repeats his former success but wins the most
coveted prize in the whole show, **Grand Champion
Pen** of the show, with all varieties competing and with it
goes the **LARGEST SILVER CUP OFFERED**.

Parkside Strain is Line-Bred, I mean birds bred in line
for over ten years without the introduction of outside blood.
BIRDS bred up to the highest state of perfection and each
year's stock showing great improvement over those bred in
previous years. Every bird exhibited or sold, is bred and raised
on this farm. My catalog shows photos of their ancestors.
This is the place to come for honest birds, that will reproduce
themselves. I have thousands of satisfied customers, and
furnish quality at reasonable prices. I have plenty of breed-
ing stock to offer and **Conditioned Exhibition Birds**
that will win anywhere. Write your wants.

BRED-TO-LAY STOCK

I have a limited amount of stock in **mated-up pens** to offer
at reasonable prices, also **males** and **females**.

CHOICE EGGS FROM TRAP-NESTED HENS
with records of over 200 eggs a year.

I can furnish you good ordinary Breeding Stock, also incu-
bator eggs and day old chicks in lots of 100 to 1000.

THE PARKSIDE POULTRY FARM

Box 40

N. P. Easling, Prop.

PEKIN, ILLINOIS

Bakersfield, Cal.

Dear Sir:—When it comes to
Parkside Leghorns I cannot speak too highly
of their quality and your treatment. The dif-
ferent breeders out here say that you are the
only **EASTERN FANCIER** who ever sends a
California his full money's
worth.—W. J. Coombs.

Irondale, Wash., Nov. 9, 1914.

Dear Sir:—Obtained 11 chicks
from a setting from pen No. 5, 12 chicks from
pen No. 4, and the shipment was delayed 6
days in Seattle by the Express Co. We shall
always be ready at any time to speak a good
word for your stock and your
treatment of customers.—Mrs. R.
H. Lowrey.

Lockport, Ill., Jan. 13, 1915.

Dear Sir:—From stock which I bought of
you, I entered four birds at the January, Joliet,
Ill., show, winning 1st chl., 1st hen and 2nd chl.
A record I am quite proud of.—Herbert Food-
isch.

Strasburg, Mich., Jan. 4, 1915.

Dear Sir:—I am more than
pleased with the chickens I raised from the
eggs bought of you. I do not exhibit but in-
tend to when I have more of the same strain.
I would advise anyone wanting prize winners
to give **PARKSIDE STRAIN** a
trial.—Wm. G. Geneler.

Gridley, Ill., Jan. 9, 1915.

Dear Sir:—From eggs I bought
of you I raised the 1st, 2nd and 3rd chl. and 1st
and 2nd pen at Bloomington, Ill., show. Also
entered one chl. at Mt. Pleasant and won 1st
and sweepstakes. At Champaign I entered a
chl. and won 1st and champion
male.—W. H. Settle.

Lancaster, Ohio, Dec. 28, 1914.

Dear Sir:—I won 2nd and 5th
on cockerels at the Ohio State Show on birds
hatched from the eggs I got from you, and will
want more eggs again next Spring.—Fred
Stuck.

Bay City, Mich., Nov. 12, 1914.

Dear Sir:—Of eggs received
from you I hatched some of the finest birds
ever seen. I raised two cockerels in particular
which I would not part with for less than \$50
each. One has the same type of your first
Chicago cockerel 1914, and his
color is nearly perfect.—E. J.
Keena.

Moose Jaw, Sask., Can., Aug. 12,
1914.

Dear Sir:—Think it is about time I wrote
and thanked you for the way you treated me.
From the setting of eggs I hatched 32 fine
chicks. Have one cockerel raised from these
chicks that I consider the best
bird I have ever seen and I would
not take \$50 for him.—Thomas
Gibbs.

Anderson, Ind., Nov. 9, 1914.

Dear Sir:—Hatched 11 chicks
from the \$5.00 setting of eggs I bought of you.
In September I entered 4 pullets of this lot at
the Indiana State Fair, and got 1st and 2nd
prize. This is sure going some. \$150.00 would
not buy the birds we raised from
this setting.—Parker S. Short.

Beloit, Wis., Jan. 5, 1915.

Dear Sir:—On eggs purchased
from you in 1914 we won 1st and 2nd cock-
erel, 1st pullet and 1st pen. We also won 1st
hen and 1st cock on stock raised from your
1912 matings in a strong competition. Thanks
for your courteous treatment.—
Guy S. Lee.

Davenport, Wash., Dec. 21, 1914.

Dear Sir:—Entered 2 pullets at
the Spokane Poultry Show that were raised
from the setting of eggs we got of you, and
won 2nd pullet in strong competition with 1600
in the show. These birds certainly have the
true Leghorn type.—R. R. Cath-
cart.

Portland, Ind.

Dear Sir:—We won 1st on chl.,
1st on pullet and 1st on display at our County
Fair. These chickens were hatched from the
eggs we bought of you last March. We are
proud of our birds and presume you feel inter-
ested.—J. A. Elder & Son.

West Burlington, Ia., Jan. 4, 1915.

Dear Sir:—At Iowa State Poul-
try show won 1st and 3rd chl.; 1st, 2nd and 3rd
pullet; 2 silver cups, also A. P. A. medal for
best bird in Mediterranean class; only entered
5 birds. Our 1st pullet was the most attractive
bird at show. Thank you for fair
dealing.—Fritz Bros.

Peoria, Ill., Dec. 7, 1914.

Dear Sir:—From the setting of
eggs I purchased from you last Spring I raised
two choice cockerels, either one of which is
worth double the price of the eggs. I showed
one at the Peoria show and won 2nd prize on
him.—Rud Eberhardt.

Franklin, Tenn., Jan. 5, 1915.

Dear Sir:—I got 11 chicks from
the 15 eggs I purchased from you last Spring
and consider this very good for the distance
the eggs had to come. I think a whole lot of
the birds I raised and wouldn't care to part
with them.—Jesse J. Reams.

A TESTIMONIAL AND A WINNER IN EVERY EGG

1st Wh. Wyandotte Cockerel New York

(Madison Square Garden); also 1st cock, and 1st pen male, 1915, 1st Boston cock, 1st cockerel and 1st pen male, 1914, 1st Guelph cock (the Madison Square Garden of Canada) and 1st cockerel, which was also awarded.

Sweepstakes for best bird in the entire show

are all in our breeding pens, and when we tell you we have twenty pens headed by New York and Boston winners, you will have some idea of the exceptional quality of the now famous Premier Strain of White Wyandottes—"the kind you'll eventually buy."

Special Sale of Breeders

Owing to lack of accommodation, we are sacrificing 200 breeders at \$3 and \$5 for females and \$5, \$10 and \$15 for males, as we simply must have room. The quality will surprise you and we positively guarantee satisfaction.

OUR LIGHT BRAHMAS

practically made a clean sweep at Guelph and Detroit, and at the former show were awarded

Sweepstakes for four best birds of any breed

E. B. Thompson, Amenia, N. Y., showed probably the best Barred Plymouth Rocks ever exhibited at the Madison Square Garden Show, 1916. The picture above of the first cockerel shows unusual quality in type and most beautiful barring.—L. A. S.

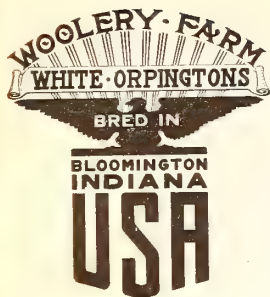

A winner in the White Orpington cock class, Madison Square, 1916. Owned and bred by Ralph Woolery Co., Bloomington, Ind.

Third Buff Orpington cockerel, Madison Square, 1916. A bird almost perfect in color and type. Bred and owned by Chas. Hubbard, Lime Rock, Conn.—P. K. W.

At Madison Square in a class composed of thirty birds represented by some of the best S. C. Red breeders of the country, this bird won second pullet. Bred and owned by B. H. Scranton, Rising Sun, Ind.

CHICAGO, DECEMBER, 1915

A SWEEPING VICTORY FOR
OUR AMERICAN Bred-To-Lay

White Orpingtons

First display; special best three cocks; special best four females; special best two young pens; 1st hen, 1st young pen; 2, 4, 5 cock, 5 hen, 3 cockerel, 3 young pen. This show declared by judge the best quality show to date. We made this best winning ever made on Whites at Chicago and with every bird for the

past seven generations, American Bred-to-lay, Line Bred on Woolery Farm by Ralph Woolery.

If you want the best winners for any show, or breeders, birds that have the laying ability and individuals that will breed you winners, write us for quotations from the "Best Line of Males in the Country." We'll sell you a bird to show and win anywhere; ship him in perfect condition, at a fair price. We can send you a Cock, Hen, Cockerel, Pullet or Pen to win as easily. Our yards are mated now for the egg trade. Our mating list is ready. Write for it and big free catalog today.

WOOLERY FARM

Box A

BLOOMINGTON, IND.

RILEY'S White Wyandottes

Broke all records at the Ohio State Fair, September, 1915, winning six firsts, three seconds and two thirds. The quality of my exhibit was freely commended by both judges and breeders. This, together with my winnings of December, 1914, at the Great Coliseum Poultry Show and Toledo, proves their quality as breeders. They are bred to lay with the same care they are bred to win. Why not try the strain that wins as well as lays? Eggs from pens headed by my winners at \$3.00, \$5.00 and \$10.00 per 15 eggs. Some nice Cockerels at \$5.00, \$7.50 and \$10.00. Send for catalog.

Get my price on winners for your show.

GREATER CHICAGO SHOW

GREATER CHICAGO SHOW

Reported by F. D. Rogers

THE third annual show of the Chicago Poultry Breeders' Association held January 13-19, 1916, will go down in history as one of the best and largest shows ever seen in Chicago. In the poultry department there were over 3,000 birds on exhibition and in the neighborhood of 2,000 entries of pet stock. Three very large and spacious rooms were required to coop this great exhibition. All of the rooms presented a most pleasing appearance.

Among those having very attractive booths were Edwards & Loomis Co., Albert Dickinson Co., Prairie State Milling Co., J. J. Badenoch Co., Continental Hatchery Co., Darling & Co. and the Cyphers Incubator Co.

Another feature that was much in evidence was the exhibition of Capons made by George Beuoy, of Cedar Vale, Kan., better known as the Capon King. Many of his World's Fair winners were on exhibition here. Lectures and demonstrations by him were given during the week, which attracted much attention and favorable comment.

A feeling of good fellowship and sportsmanlike spirit seemed to prevail among all the fanciers during the entire week, and already plans are being made for a still larger show next year.

A banquet given by the order of the F. L. E. A. was largely attended, about sixteen new members being initiated during the evening. Several impromptu and appropriate speeches were made by members. Henry D. Riley, of Pennsylvania, president of the order, presided at the business meeting; D. E. Hale, editor of the Big Four Poultry Journal, was toastmaster at the banquet.

In a show of this size it is readily understood that many fine specimens necessarily have to go unplaced. Time and space forbids us to mention many of these birds that naturally would win in most shows. Twelve of our best known and most able judges officiated in the poultry department.

The Barred Plymouth Rocks were the greatest sensation of the show with nearly 500 individual specimens on exhibition, making one, if not the largest class of this variety ever seen at any show in America. It was the meeting of the National Barred Rock Club and the fanciers of this grand breed should be given much credit for the enthusiasm shown and the large number of birds on exhibition. Newton Cosh, of New Jersey, well-known judge and breeder, handled the entire class to the general satisfaction of all concerned.

Honors, of course, were somewhat divided, with Truckenbrod Bros. of Mendota, Ill., winning the majority of prizes and best display. The birds shown by them were fine specimens and were shown in grand form.

These well-known breeders have attained an enviable position among Barred Rock fanciers and this winning sustains the reputation they have attained in the past.

Much credit should be given John McPherson, of Minnesota, for the excep-

D. E. HALE,
Secretary Greater Chicago Show.

tional quality shown in the birds exhibited by him. His 1st, 6th and 7th prize cockerels and 1st cock bird were outstanding and well placed.

D. F. Palmer & Son, Yorkville, Ill., and G. A. Walker, of Polo, Ill., showed birds of exceptional quality. Henry D. Riley of Strafford, Pa., won 1st pullet on a grand specimen showing wonderful type and color.

Fairly large classes of White Plymouth Rocks were seen, with P. J. Olle, Racine, Wis., winning most of the honors and best display. His birds were especially good in both type and color. John Grant, of Richmond, Ill., made one entry and won 1st cock on a bird that would at once command the attention of any White Rock fancier.

Classes in Buff Rocks compared favorably in size with the White Rocks. M. C. Astle, Momence, Ill., won 1st pullet on a bird of exceptionally good color and type.

Partridge Rocks were small classes, but with quality above the average, P. J. Olle, Racine, Wis., winning most of the prizes and best display.

Except in pullets, a small class of Silver Wyandottes were shown. Frank Faha, Jr., Dyersville, Ia., and M. F. Martin, Chicago, divided honors on birds of good quality thruout.

The Silver Penciled Wyandottes shown by Aug. Bloese were down to date specimens and well shown.

White Wyandottes were one of the largest classes consisting of fine quality thruout; Chas. V. Keeler, of Winamac, Ind., and George H. Rudy, of Mattoon, Ill., winning most of the honors. Mr. Keeler received the majority of the prizes and best display.

The state meeting of the Buff Wyandotte Club was held at this show and

many grand specimens were on exhibition; Charles Howison, a well-known breeder of Sandwich, Ill., winning most of the prizes and best display. His 1st prize cock bird and the male in 1st old pen were above the average seen and deserve special mention. F. L. Waterman & Sons, of Barrington, Ill., were also winners in this class.

Dr. G. C. Culver, of Sandwich, Ill., made a creditable winning in Partridge Wyandottes.

In Columbian Wyandottes, Jos. Hauk, Waukegan, Ill., won 1st cock and 1st pullet, with two birds entered. They were outstanding and well placed. Arthur Merrell, Solon Mills, Ill., also Leo A. Lee, Chicago, were among the winners in these classes.

In Single Comb Rhode Island Reds the classes were large and of good quality. M. C. Davis, of Woodstock, Ill., made a very consistent win which included 1st pullet with only one entered. Mr. Davis' birds showed the same characteristics thruout and this win placed him on par with other leading breeders in the mid-west. F. E. Harrison, the well-known breeder of Menominee, Mich., won 1st cock on a grand specimen. He also had the honor of winning champion of the show with this particular bird. Frank Johnson, Chicago, won 1st hen with a bird of good type and strong undercolor. George Demlow succeeded in capturing 1st among a large class of 34 cockerels.

F. E. Harrison won 1st cockerel in Rose Comb Reds, with one bird entered. This particular specimen possessed wonderful color and good type.

Chas. McClave, New London, O., made a grand showing in the Light Brahma class, winning most of the prizes.

S. C. White Leghorns, as a class were exceptionally large and good quality; honors being principally divided between Eugene C. Smith, Aurora, Ill.; N. P. Easling, Pekin, Ill., and Meadow Lark Farm, Elgin, Ill. Mr. Smith's win was most consistent. The birds shown by him were of the refined type so much admired by the down-to-date fancier; his strain winning in the cockerel class, 1st, 2d, 3d, 4th and 5th prizes. He also won in all the other classes and best display. N. P. Easling, Pekin, Ill., made a notable win which included 1st old pen and 1st hen, besides several other places. This particular pen had the honor of winning champion pen of the whole show, all varieties competing; as is conceded by many, the most coveted prize. Meadow Lark Farm, of Elgin, Ill., were well represented among the winners, winning 1st cock and 1st pullet. This particular female being a bird of excellent type and color and an easy winner.

J. S. Bales, of Springfield, Ill., made a good winning in Rose Comb Black Minorcas, making nearly a clean sweep and winning best display.

Single Comb Buff Orpingtons were one of the three largest classes shown

WHITE LEGHORN
FIRST PEN COCK GREATER CHICAGO SHOW-1916.
bred and owned by
N.P.EASLING PEKIN, ILLINOIS.

N. P. Easling's White Leghorns are always mentioned when speaking of first-class birds of this breed. The reason for this is found in their consistent winnings at the largest shows in America. At the Greater Chicago Show, January, 1916, they repeated their former success by capturing again first prize pen in hot competition. We show herewith the male heading this fine pen. The fine type, beautiful shaped back and tail caused many comments.—L. A. Stahmer.

with quality above the average, the prizes being more or less divided; H. Woods, Carlinville, Ill., and Henry Scherruble, Elgin, Ill., showing some especially fine specimens. Mr. Scherruble was among the winners in the hen class, this particular bird winning 1st here last year. F. A. Kaup Orpington Farm, Glen Ellyn, Ill., had some fine specimens on exhibition; his 1st old pen being especially well mated, showing a fine even shade of buff and good type thruout. Z. D. Struble judged this class to the satisfaction of all concerned and had on display, some very fine birds of this particular variety.

Black Orpingtons were a good class; Moore & Bowlens making a good win. Chas. Tucker, of Sycamore, Ill., showed birds of good type and color.

Fair classes of White Orpingtons were seen; Henry Gassman, Olney, Ill., and Wm. and C. W. Tyler, Elgin, Ill., being among the winners. R. Stepes, Champaign, Ill., was also a winner in this variety.

Johnson & Rau, Indianapolis, Ind., won most of the prizes, including best display in Blue Orpingtons.

Dr. M. A. Hanson, Osage, Ia., made a good showing in Buttercups.

The display of pigeons and pet stock was one of the stellar attractions of the show, there being over 2,000 entries in this department alone. Much enthusiasm was shown by the fanciers interested in these classes.

The list of awards in full are are follows:

BARRED ROCKS—J. McPherson, South Stillwater, Minn., 1 Ex. cock, 1-6-7 ckl; Arthur Irvine, Lake City, Minn., 2-6 Ex. cock, 5 ckl, 5 hen; C. ROSE COME RHODE ISLAND RED

FIRST PRIZE COCKEREL DETROIT, JAN. 1916

LONGFIELD POULTRY FARM, BLUFFTON, IND.

First, second, third, fourth and fifth White Leghorn cockerels, and first pen cockerel, at the Greater Chicago Show, January, 1916.—all Smith's strain. Made from unretouched photos. Eugene Smith, 317 Galena Boulevard, Aurora, Ill., made a remarkable win at this show, as follows: First, third and fifth cockerel; second and fifth cock; second, third and fourth hen; second and fourth pullet; first young pen; second old pen, and best display; while a customer of Mr. Smith's showed two cockerels and two pullets hatched from one sitting of eggs purchased from Mr. Smith, and won second and fourth cockerel and fifth pullet, which were purchased by Mr. Smith after the awards were placed. This is surely proof of the high quality of Mr. Smith's strain.—L. A. Stahmer.

Haskins, Jesup, Ia., 5 hen; Geo. Demlow, Libertyville, Ill., 3-4 hen, 1 ckl, 4-5 plt, 3-4 old pen, 5 yng pen; A. J. Whitfield, Millbrook, Ill., 2 ckl; F. A. Laird, 3 ckl; Jas. The S. C. Rhode Island Red hens in this group have records of 243, 240, 236, 234 and 231 eggs.

First hen at National White Wyandotte Club meet, 1916. Owned by M. J. & Marshall, Niagara Falls, Canada.

One of many fine Buff Orpingtons, of C. A. Keefer of Muskegon, Mich., an old time fancier and consistent winner.

F. A. Kaup, of Glen Ellyn, Ill., showed some beautiful Buff Orpingtons at the Greater Chicago Show, January, 1916. The pullet from the first prize pen has all desirable qualities of the breed.—L. A. S.

This beautiful S. C. Rhode Island Red was winner of first cock and champion at both Chicago Coliseum and Greater Chicago shows. Bred and owned by F. E. Harrison, Menominee, Mich.

1st and Champion White Rock Cockerel,

Consequently the Best

At the World's Fair, San Francisco, Nov., 1915 where the country's best birds were gathered for competition, we entered eleven birds and nine were in the ribbons. This wonderful winning was made with our Red Chief Strain of

Single Comb Rhode Island Reds

You, friend reader, are the judge, wasn't it a wonderful win? Just consider, the leading Red breeders of the country were there; consider that our birds traveled clear across the entire country, yet made the remarkable win of

1st Cock 1st and 2nd Pullet
7th Hen 3rd Pen

Gold Medal for Champion Pullet, all classes competing. There were twenty-nine entries in the Cock class and Red Chief winner of First Cock was pronounced by all judges to be one of the grandest specimens ever shown. At the World's Leading Shows,

**Madison Square Garden, 1916
and Boston, Mass., 1916**

In the very strongest competition ever exhibited at these two leading shows exhibiting our

White Plym. Rocks

**We won at the
GARDEN**

**2nd Cock
2nd Pullet
5th Cockerel
3rd Pen**

**We won at
BOSTON**

**2d, 4th Cock
5th Cockerel
3rd Pen**

WHITE WYANDOTTES. We did not exhibit this variety at the Garden show. At Boston we captured 2nd Cockerel and 5th Pen.

You, no doubt, have heard about the "hot" Red class at these two shows. Our win at BOSTON was, 4th Cockerel and 6th Hen; at the GARDEN, 5th Pen. Now, friend, bear in mind that these winnings were made at the largest and best shows of the country, where competition was very keen and where a win means something.

IF YOU WANT STOCK

that will win, lay and pay, get our prices before you place your order. Our prices on eggs and baby chicks are the very lowest; quality considered. Don't even hesitate, write your wants.

MIRIMICHI POULTRY FARM

SILVER SPANGLED HAMBURG—Carl Staack, 1 cock, 1 hen, 1 plt; J. Al. Bostedo,

Second Columbian Wyandotte hen, Chicago, January, 1916. A high scoring bird, unusually good in color. Bred and owned by Arthur Merrell, Solon Mills, Ill.—E. W.

Another Triumph

1st Cock—1st Pullet

At the Greater Chicago Show, January 12-19, Meadow Lark Farm Leghorns kept up their habit of winning firsts in hot competition. Meadow Lark Farm is a commercial egg plant; but we have succeeded, where others have tried, in combining showroom with laying qualities. Our hens MUST LAY. They are perfect enough to beat birds bred for show purpose only.

Meadow Lark Farm S. C. White Leghorns

are the birds you will find most profitable. They'll lay for you when egg prices are high; they'll breed stock able to win in the hottest competition. There are years of scientific breeding back of this strain and the prices are reasonable.

EGGS FOR HATCHING

Get some of our eggs either from our Special Matings or Flock Matings. You'll be more than pleased with the birds hatched. Fertility guaranteed.

LAYING FEMALES

We are prepared to supply a limited number of pullets, genuine Meadow Lark Strain, now laying or ready to lay. These will prove to be a wonderful investment.

BREEDING MALES

Here's a chance to get Cocks or Cockerels that will breed into your flock the quality your birds need. They'll produce layers and winners. Write us your needs.

Chick Time is Here! It's Fertile Eggs You Need Now

Gilbert Hess, M. D., D. V. S.

Look to your breeders now—get them in condition. Remember that the number of fertile eggs depends upon the health and stamina of your flock. Feed Pan-a-ce-a and when the little chicks are hatched, guard them against leg weakness, diarrhoea, gapes, indigestion, etc. Now, listen : So sure am I that

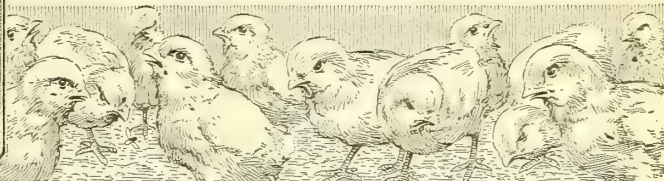

Dr. Hess Poultry PAN-A-CE-A

A Tonic—Not a Stimulant

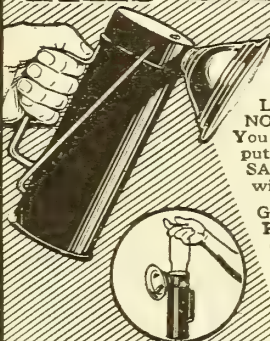

will help to make your poultry healthy, put them in a hardy, vigorous condition, help your hens lay and your chicks grow, that I have told my dealer in your town to supply you with enough for your flock, and if it doesn't do as I claim, return the empty package and get your money back. A penny's worth of Pan-a-ce-a is enough for 30 fowl daily. 1½ lbs. 25c; 5 lbs. 60c; 12 lbs. \$1.25; 25-lb. pail \$2.50 (except in Canada and the far West). If not at your dealer's, write

WE CHALLENGE

any person in the world to hatch one egg the Magic Egg Tester registers unhatchable before incubation. 2d. We challenge anyone to produce evidence of one 200 egg layer that was not hatched from an egg rated good by the Magic Egg Tester. It is a sure loss to take a chance on weak eggs. Unimpeachable testimonials. You save and make money when the Magic Egg Tester picks out the eggs for hatching. Don't use weak eggs. It kills the profits, and nearly kills you. This device also helps to regulate moisture. Price \$2.00 and no expense to use.

One year's trial given. Money back if not satisfied. Orders filled by Insured Parcel Post. Sold by Poultry Supply dealers throughout the country, or by the Magic Egg Tester Works. Dept. B Buffalo, N. Y., also Bridgeburg, Canada

Skinner's White Wyandottes

Win at the World's Fair at San Francisco—Only two pullets entered, both were placed, in one of the largest classes shown to date, and in competition with the best breeders both east and west. My Wyandottes have won at Chicago, St. Louis, Indianapolis, Illinois State Fair, etc. for years. A grand lot of birds for sale. Send for my catalog. F. E. SKINNER, BOX 306A, SANDWICH, ILLINOIS

White Orpington cock, winning color special, Chicago, January, 1916. A brother to the first prize cock at Chicago Coliseum, December, 1915. Owned by W. E. Read, Maywood, Ill.—E. W.

First prize R. C. Black Minorca cockerel, Greater Chicago Show, January, 1916. One of the best specimens of this variety shown to date. Bred and owned by J. S. Bales, Springfield, Ill.—F. D. R.

The Chicago, January, 1916, Show was the fifth show this season at which this Wyandotte cockerel was shown. Considering this fact, the condition of the bird was remarkable. It has won several prizes. Bred and owned by M. F. Martin, 3859 Park Ave., Chicago.—E. W.

Rudy's Perfection

White Wyandottes

THE KIND THAT PLEASE

Come to me for pure white, broad backed Wyandottes with well spread tails and perfect head points, so much desired in this beautiful variety. I will treat you right. I can supply you with prize winners or utility birds at prices to meet your pocket-book. Don't think that my prices are beyond your means just because I have the reputation of being one of the most successful breeders of Wyandottes. My prices are reasonable, both for stock and eggs—just send for catalog—and be convinced.

I make a specialty of furnishing breeding pens for utility purposes—mated correctly—the kind that will lay the foundation for a flock of beauty—I term such matings

MY \$35.00 BREEDING PENS

I will furnish other matings and single birds at equally moderate prices. All orders receive my personal attention and all birds are carefully looked over by me before being shipped. My birds are all Farm Raised—they have free range and are milk fed, producing bone, size and vigor. 7 first prizes, 6 seconds, 7 thirds and 4 minor prizes besides special cup for best display and champion Hen, 1915. Those are my combined winnings at the last two Chicago Breeder's Ass'n shows in Jan. 1915 and in Jan. 1916. These winnings exceed the combined winnings of all competitors and should prove to the most skeptical that Rudy knows how to mate his pens. Write for my illustrated catalog—my silent salesman.

Egg orders booked now for early spring delivery. 100% fertility guaranteed.

\$5.00 for 15; \$9.00 for 30; \$15.00 for 50; \$25.00 for 100.

THE POULTRY EXHIBITION OF
PITTSBURGH, PA.

Held January 17-22, 1916.

By P. K. WHITE.

SHOWS may come and shows may go, but the Pittsburgh Show will go on forever. Why? The spirit is there, those "boys" that promote it, if given five minutes of your undivided attention are bound to prove to you that your entire success lies in exhibiting at Pittsburgh.

Considering the fact that this, their Fifth Annual Exhibition, was held at Motor Square Garden, which is about six miles from the down-town district, the attendance was very good.

First prize and champion S. C. Black Orpington hen, Illinois State Show, De Kalb, January, 1916. Grand type and color. Bred and owned by Chas. Tucker, Maple St., Sycamore, Ill.—F. D. R.

There is not an exhibitor that attended Pittsburgh that did not leave there vowing his sales were as good as at any show he had attended and further adding that next year he would bring a friend exhibitor, for he had been treated so royally by all.

There was a banquet almost every night and the attendance at these affairs proves that the exhibitors like this get-together spirit; other shows would do well to bear this in mind. The banquet given by the show was held in the Hotel Dorset (and, by the way, the manager, Eddie Arnold, sure is some hotel man, he made everyone feel at ease and just as if they were right at home). This banquet brought

LONGFIELD R. C. REDS

Are again victorious at the greatest of all Red shows, winning

3 FIRST PREMIUMS

At the December, 1915

Chicago Coliseum Show

Being the only R. C. Red breeder to win more than one first premium. Our complete awards were: 1st cock, 1st old pen, 1st and 5th young pen, 2nd and 4th hens, 2nd pullet, silver cup for best display, silver cup for best four cocks, silver cup for best four hens, silver cup for best four pullets, and shape and color specials on male.

At this great show we have won best display three successive years—a record—and in the past five seasons have won more than four times as many first premiums as any competitor.

We have a fine lot of stock for sale in both breeding and exhibition birds—on approval always. Illustrated mating list ready February 1st.

C. W. BESSE - JEFFERSON, MAINE

Tyler's White Rocks Always Win

Have established wonderful records at Illinois State Show and many others thruout the country. Nearly a clean sweep this year at the State Show, De Kalb, winning nearly every prize and best display. Eggs and stock for sale. S.A. Tyler, Lincoln Highway, DeKalb, Ill

forth the real talent in speech making and the good things that were told would fill a book. The address of welcome (and he sure meant it) was given by F. A. Goedecke, the President, following which, he introduced Chas. J. Fisk of Wilburtha Farms as Toastmaster. Mr. Fisk's fame as toastmaster is too well known for comment to be necessary, suffice to say, he was in his regular form.

Here are a few of the remarks: Judge Wid Card—Tell you what, fellows, when a man enters this game his conscience is as large as an ostrich egg, but after he has exhibited four

First prize Silver Penciled Wyandotte cock, Greater Chicago Show, January, 1916. Doubtless one of the best birds of this variety ever shown. Bred and owned by Aug. Bloese, 5738 Lawrence Ave., Chicago, Ill.—F. D. R.

times—well, then the hen's egg is about the size. W. B. Craig—After 15 years at it, I feel I am a fancier; 14 years ago I was sure of it. "Santa Claus" Rankin, his kind and thoughtful toast of good old Hugh A. Rose will never be forgotten. Tell you what, friends, I saw many a tear-dimmed eye when he finished speaking. That ever popular Fred Kummer, as in other things, his talk was brief but good. Next came "Scotty"

30,000 Chicks for 1916

from four varieties at the following low prices:

	Per 25	Per 50	Per 100
Barred Ply. Rocks...	\$3.00	\$5.50	\$11.00
S. C. W. Leghorns...	2.75	5.00	10.00
S. C. Brown Leghorns...	2.50	5.00	10.00
Broiler Chicks.....	2.00	4.00	8.00

Chicks all hatched in Candee mammoth machines. Write for free catalog and price list, and mention American Poultry Journal.

MISS BARBARA BLUM, Dept. C. New Washington, Ohio

Bowers; it wasn't the amount of words he spoke, it was the way they were spoken; everyone likes Scotty and you can't blame them. Next came "Hank" Schwab. "Pop" Fisk told him he could have five minutes if he was good—he had five minutes. Last but not least, was Czar Baldwin, the Secretary of the show: keep his name in mind, you are going to hear big things of him, for once you meet him, you know he is on the square.

As I stated before, these "Pittsburgh boys" have a wonderful organization, and in passing, it is fitting that especial mention be made of the following, for they are the boys who were on the job 24 hours each day: John Spencer, the Red breeder, was superintendent, and he delivered as only John can; Geo. Hilderbrand, Chief of clerical force; "Chuck" Miller, bureau of information (he is also a magician). Last but not least, came Mrs. Baldwin, who so ably assisted her husband in looking after the exhibitors' interests. Lest I forget, wonder if Chas. Hubbard arrived home safely with his gift from the "Fleas."

The list of awards follows:

BARRED PLYMOUTH ROCKS—L. B. Ressegui, Millers, N. Y., 1-2 cock, 1 hen, 1 chl, 1-2 plt, 1 yng pen, 1 old pen; Howard Spahr, 143 N. 3d St., Duquesne, Pa., 3 cock, 5 hen; S. C. Hillard & Son, New Bethlehem, Pa., 4 cock, *4 chl; W. K. Hoffman, Mor-

gantown, W. Va., 5 cock, *2-*3-*4 chl; Harry B. Arbie, R. D. No. 5, Butler, Pa., 2 hen,

"Champion Layers"—We BRED THEM

WHITE WYANDOTTE
Official Record, 265 Eggs

These five White Leghorn pullets won the silver cup and seven medals in the last North American Laying Competition. This pen produced 1,139 eggs, the highest official record made by any pen of five hens bred on American soil. Individuals produced 251, 250, 224, 222 and 192. Remember, we bred these

COMPETITION WINNERS

which defeated the Leghorn entries of Tom Barron and Ed. Cam. We still own them as well as hundreds of other heavy-layers, carrying the same blood. A thorough-bred English cockerel sired a pullet that broke all records, making an official record of 314 eggs, in North American Egg Laying Competition, 1915. If you want Leghorns that lay, if official egg-records mean anything to you, you should secure our strain. Our Reds, Wyandottes and Orpingtons are also wonderful layers. We have many individuals which hold remarkable official records and this bred-to-lay strain is strong in every bird in our great flocks. We supply

Eggs for Hatching, BABY CHICKS, Early Hatched Cockerels, Breeding Stock

BUFF ORPINGTON
Record, 272 Eggs

at very moderate prices. And our customers know what they are getting because we have demonstrated the quality of our stock thru consistent winnings at the great public laying competitions.

"SUNLIGHT" POULTRY FARM S.C.W. LEGHORNS

Greatest Known Layers. (D. W. Young) Strain

60,000 S. C. White Leghorn Baby Chicks For Sale in 1916

Have you ever done any business with the Sunlight Poultry Farm? If not, you should by all means investigate my stock and business methods. I shall operate two Candee Mammoth Incubators this year, and every egg used will be from my birds here on the farm. Again I have increased my incubator capacity 6,600 more and know that I shall be taxed to the limit for months this season. I have never yet produced half enough chicks to supply the demand. I am breeding the best Leghorns that skill, labor, capital and experience can produce—such Leghorns as 98% of the public desire. Better looking, better laying and stronger stock cannot be bought anywhere at any price. The majority of my customers raise almost every chick, and some of them raise every one, as they are among the strongest strain of birds you can find in America today. My prices for this year are no higher than they were last year. Prices are as follows:

Eggs for Hatching

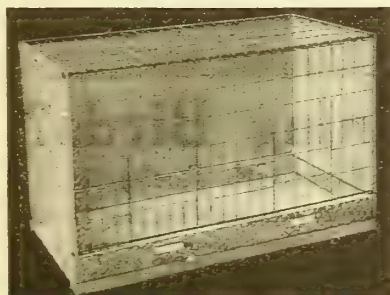

1 Setting of 15 Eggs.....	\$1.50
1 Setting of 50 Eggs.....	3.50
100 to 500; per 100.....	6.50
500 to 1000; per 100.....	6.00
1000 to 5000; per 100.....	5.50
5000 or more; per 100.....	5.00

Day-Old Chicks

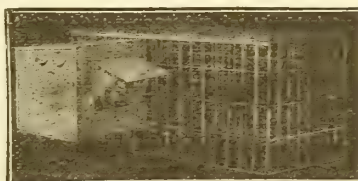

25 to 50 Chicks.....	\$.11
50 to 100 Chicks.....	.13
100 to 500 Chicks.....	.12
500 to 1000 Chicks.....	.11½
1000 to 5000 Chicks.....	.11
5000 or more Chicks.....	.10

If you have not placed your order, right now is the time to place your order so as to not be disappointed. Orders will be booked for future delivery on receipt of one-fourth the purchase price; the balance to be sent before order is shipped. Cocks, cockerels, trios and pens for sale at all times. Write your wants. Catalog free. Satisfaction guaranteed.

Norwich-Feeding Proven Better Than Hand-Feeding

No one disputes the fact that the use of Norwich Automatic Feeding Appliances reduces labor and saves feed. Here is official proof that these machines also produce better results than hand-feeding.

All layers in the four completed North American Laying Competitions have been fed by Norwich Automatic Feeders; in the two Connecticut Competitions practically the same ration was used but was hand-fed. Now note the average production of the entire flock by years:—

North American Competition:—154; 156; 170; 165

Connecticut Competition:—144; 151

Average N. A. Competitions, with Norwich Feeders:—167½ eggs per hen

Average Connecticut Competitions, hand-fed 147½

Proven gain from use of Norwich Automatic Feeders, 20 eggs per hen.

With eggs valued at 3 cents each, this amounts to 60 cents per layer, or \$600 for a flock of 1,000 hens.

TEST NORWICH AUTOMATIC EQUIPMENT AT OUR RISK

Use one or many of our feeders for 30 days. If you are not satisfied with results, return feeders and your money will be refunded. Can you afford to hesitate when we offer to prove at our risk that you can secure better results?

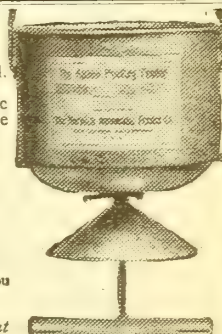

Most live dealers in poultry supplies will furnish Norwich Equipment on the above terms. If necessary we will ship direct on your order.

SPECIAL OFFER

Our new Apaco Feeder, 12-quart capacity, is similar in action to the Norwich Automatic Feeder, but is specially designed for owners of small flocks. For One Dollar we will deliver an Apaco Feeder to any point in the U. S. east of the Mississippi; \$1.30 beyond that point. Order today and feed your layers right!

Our big illustrated catalog mailed free on request

Do You Want to Own Winning Birds?

The Henderson Strain are the World's Foremost Plymouth Rocks

Because They Have an Established Official Record for the Past Twenty Years at America's Leading Shows

Their wonderful winnings in the past were eclipsed this year by their performance at two great shows. In competition with the best from the yards of our foremost breeders, and in the largest classes ever shown in the South and great Middle West, they won eighteen out of a possible twenty-two first prizes. This unprecedented victory was attained with two different strings of birds and the fact that the Henderson Strain won every first prize offered on male birds at these two great shows is revelation in Barred Rock breeding.

Write me if you want the best quality of exhibition birds to show at your coming show. I can send you birds in the pink of show condition at prices that will suit.

I have a grand lot of breeding birds, either cockerel or pullet bred, that have the quality necessary to produce winners. If you want a down to date breeding male bird, I can furnish you with more quality for less money than any other breeder.

Two of the Greatest Wins Ever Made by a Barred Rock Breeder

At the Tri-State Show held at Memphis, Tennessee, the last week in October, 1915, in competition with 553 Barred Plymouth Rocks from the yards of our best breeders, the Henderson Strain won as follows:

First Prize Exhibition Cock, First Prize Exhibition Cockerel, First Prize Pullet Bred Cock, First Prize Pullet Bred Cockerel, First Prize Cockerel Bred Hen, First Prize Cockerel Bred Pullet, First Prize Exhibition Pen First and Second Prize Cockerel Bred Pens, First and Second Prize Pullet Bred Pens, Special Prize for the Best Display in the American Class; Sweepstakes Prize for the Best Exhibit in the Show, all varieties competing, my birds winning over two thousand points; Sweepstakes Special for the Best Cockerel from Missouri.

NOTE—I won every first prize offered on males and breeding pen at this show.

At the Great Coliseum Show held at St. Louis the last week in November, 1915, in competition with the cream of the country, the Henderson Strain, with an entirely different string of birds than was shown at Memphis, won as follows:

First and Third Prize Exhibition Cock, First Prize Exhibition Cockerel, First Prize Exhibition Hen, First and Third Prize Pullet Bred Cock, First, Second and Third Prize Pullet Bred Cockerel, Third and Fourth Prize Exhibition Pullet, First and Second Prize Cockerel Bred Hen, First and Third Prize Exhibition Pen, First Prize Cockerel Bred Pen, First Prize Pullet Bred Pen; Special Sweepstakes Prize for the Best Display in the Show, all varieties competing; Special Sweepstakes Prize for the Best Pen in the Show, all varieties competing; Special Sweepstakes Prize for the Best Hen in the Show, all varieties competing; Special for the Best Display in the American Class, Grand Champion Male, Grand Champion Female, Special for the Best Colored Male, Special for the Best Shaped Male, Special for the Best Colored Female, Special for the Best Shaped Female.

NOTE—I won every first prize offered on males and pens at this show. My first prize exhibition hen and pen were in a class by themselves, winning both sweepstakes prizes. This is the first time that these honors were ever conferred on Barred Plymouth Rocks at any leading poultry show.

These winnings have never been approached by any other Barred Rock breeder. I have, after twenty years of selective breeding, produced that excellence of quality that shows only in the Henderson Strain, and the official record in the leading show rooms of the country shows without a doubt who has the best producing strain.

Write for my descriptive catalog of one of the largest Barred Plymouth Rock farms in the world.

For the season of 1916 I will mate forty breeding pens which will consist of the finest specimens of Barred Rocks that were ever selected for breeding purposes. Send your order for eggs as soon as possible so they may be shipped to you at the time you want them.

BRIDGETON, St. Louis County, MISSOURI

DR. HEASLEY WINS AGAIN

with his EGG BASKET STRAIN OF S. C. BUFF LEGHORNS in the world's hottest competition in laying contests and at the December, 1915

Chicago Coliseum and World's Fair Show

At Panama-Pacific with 4 entries in 4 classes we won three ribbons. At Chicago, against the world's best breeders, we won 104 points to 31 of nearest competitor, winning championships in all shape and color specials, 37 birds entered; 34 under ribbons. At Official Egg Contests made records: 211 in 9½ mos.; 215 in 11 mos.; 230 in 11½ mos. Bred for eggs but fit to show. Egg-bred cockerels at \$3.00 and \$5.00. Show stock for anywhere. My kind pay.

Which way do you work?

The old
back-breaking
way?

OR

The
Planet Jr.
way?

You can't afford to cultivate in the old slow back-breaking way. The Planet Jr way takes the drudgery out of labor, and produces bigger, better crops. Planet Jrs are the greatest time-savers ever invented for farm or garden; and the most economical cultivating tools you can use.

Planet Jr tools are the product of a practical farmer's inventive genius and manufacturing experience of half a century. Last a lifetime. Fully guaranteed.

No. 4 Planet Jr Combined Hill and Drill Seeder, Wheel-Hoe, Cultivator and Plow pays for itself in a single season in the family garden as well as in larger acreage. Sows all garden seeds (in drills or hills), plows, opens furrows and covers them, hoes and cultivates easily and thoroughly all through the season.

No. 11 Planet Jr Combined Double and Single Wheel-Hoe, Cultivator, Plow and Rake. Straddles crops till 20 inches high, then works between rows with one or two wheels. The plows open furrows and cover them. The cultivator teeth work deep or shallow. The hoes are wonderful weed-killers. The rakes do fine cultivation and gather up trash. Unbreakable steel frame. 14-inch steel wheels and specially hardened steels—both new this year. The greatest hand-cultivating tool in the world.

Thousands of Planet Jr hand-tools (seed drills and wheel-hoes) are used in kitchen gardens. We make 32 styles—various prices. You can't afford to work without a Planet Jr.

New 72-page Catalog (184 illustrations) free!

Describes over 70 tools, including 12 entirely new ones, and improvements to our Seeders, Wheel-Hoes, Horse Hoes, Harrows, Orchard-, Beet- and Pivot-wheel Riding-Cultivators. Write postal for it today.

You Know

the most coveted prize, the one that all breeders strive for? Well, that prize was captured at Boston, 1916, by **TANTALIZER**, 1st Cockerel and Champion

Barred Rocks

In addition to this my birds won 3d cockerel, 4th pullet, color special, 3d cockerel-bred hen, 3d cockerel-bred pullet, 4th cockerel-bred pen. Think of it! This wonderful win with only 8 entries. Also consider that unlike other Eastern shows, the cockerel class was composed of 20 different exhibitors. Have a few brothers and sisters of these wonderful birds at prices within your reach; also eggs from these winners. Send for complete list of our winnings.

W. W. Carpenter, E. Providence, R. I.

"Tantalizer" is a grandson of Boston King.
1st cockerel, Boston, 1913.

Wolf's R. C. White Leghorn Winners

Winners at the Great National Shows, Chicago Coliseum, Milwaukee, St. Paul, Duluth and many others. Won this year at Milwaukee, Silver Cup for best display, which included 5 firsts, 3 seconds, 3 thirds, 1 fourth. This record made in competition with birds winning at the World's Fair, San Francisco. Our birds have especially fine type, long broad backs, and real color.

Notes of the Greater Chicago Show.

By EARL WHITNEY.

An exhibition that has placed the Chicago Poultry Breeders' Association among the foremost poultry show organizations of the country. The January, 1916, show has won the right to be classed as one of the major poultry shows of the Nation.

The Barred Rock classes will go down in history. Four hundred sixty-six birds in all. To Judge Newton Cosh, of Vine-land, N. J., belongs the fame of judging the entire entry, and that, too, to the complete satisfaction of every exhibitor in the Bar d Rock classes, many of those who were not placed being warmest in their approval of his work. Judge Cosh is of the opinion that the Chicago Show produced the most hotly contested class of pullets ever shown anywhere, and says that many exceptional fowls had to be left out in all the classes, despite the fact that eight prizes were awarded in each class, birds that ordinarily would win.

The western Barred Rock Breeders want to see more of Newton Cosh in the western shows.

Dr. Clark is still marveling over the fact that Malays were among the birds shown. The Doctor believes this is the first time in the recollection of the oldest inhabitants that "Malays" have appeared in Chicago.

The Red Comb News, a newspaper published daily during the show by the Edwards & Loomis Company, proved one of the most interesting features of the exhibition. The Metropolitan dailies would do well were they permitted to "kidnap" the able Editor of this publication. There are a few copies of the earlier issues on hand which may be secured gratis by addressing the Edwards & Loomis Company, Chicago.

Particular mention should be made of the concessionists. In practically every booth space, money, time nor effort had not been spared in decorating the booth attractively. How different from the poultry shows of a few years ago. In no one feature have the shows of today made such marked improvement, and the Chicago show in this respect especially may well be used as a criterion.

It was stated by the pet stock department that this was the largest pet stock exhibition ever caged.

The spirit of co-operation shown among the members of the Chicago Poultry Breeders' Association is of the quality that assures success.

CORRECTIONS.

Owing to the unusual rush during the show season, mistakes are sometimes made. We wish to make the following corrections in regard to foot notes, etc., that appeared in our January number:

The Buff Leghorn male appearing on page 121 labeled cockerel, should have read 1st cockerel.

In Mr. Collier's report of the World's Fair Show, San Francisco, Cal., he failed to give the address of S. N. Tremper, who won 1st Barred Rock pullet. We are glad to say, for the benefit of our readers, that Mr. Tremper is located at Sandwich, Ill.

Would say in regard to the picture of the Buff Leghorn cock on page 80, January issue, labeled unretouched, that the background was somewhat retouched, but no retouching or alterations in regard to the shape or color of the bird were made.

We wish to state at this time that whenever there are scratches in the negative, which sometimes happen in developing, and erasing of these do not alter the type or color of the bird, our label of unretouched photograph shall be the absolute guarantee that no alterations have been made.

In the recent write-up of the Quincy, Ill., show held November, 1915, we neglected to mention the fine win made by Edmond J. Harbin, Riverside, Ill., in S. C. White Orpingtons. Mr. Harbin won 1 cock, 3 hen, 4 cockerel, 2 pen. Would say that these birds showed fine type and color, being true Orpingtons in every way.

In our January issue it was stated in error, that R. A. Chiles won 5th S. C. Buff Orpington pullet at the World's Fair. Mr. W. J. Steward, Los Angeles, Cal., won 5th pullet.

In the list of awards of the Chicago Coliseum published in our January issue, thru no fault of ours, the following winning was omitted: C. Sparks, Berrien Springs, Mich., 5th cock, Golden Campines.

We also wish to state that another error, fault not ours, appeared in the World's Fair 'Frisco winnings, in Buff Plymouth Rock class, this should be, first cockerel, W. H. Kent & Son, 515 Linden St., Cadillac, Mich.

On page 9 of our January issue we desire to call your attention to the advertisement of The Martling Hennyery, Ridgefield, N. J. You will note in their winnings at 'Frisco First Prize and Second Display. This was an error on our part and we hasten to correct same—it should read First Prize and First Display.

Our attention is called to an error appearing in catalog of Palace, N. Y., Show, in the Columbian Wyandotte class. First pullet is credited to Wilburtha Poultry Farm, and it should be Sunnybrook Farm, Eatontown, N. J.

In marked catalog of Pittsburgh Show in pen awards of Buttercups, winner of first old pen should be D. J. White, 1222 Patton St., Wilkensburg, Pa.

Eggs for Hatching

Anchorage Farm Stock

Bred-to-Lay Bred-to-Pay

All good quality, large-sized, healthy, vigorous, mature breeding birds. All open-air housed. Certain to yield strong, sturdy chicks. Big values at a price you can afford to pay.

SILVER LAKE, PLYMOUTH CO., MASS.

Hawkins' Barred Rocks

The Recognized Champions of America. Winners at the Greatest Shows.

Boston, New York, Chicago, World's Fair, San Francisco. The kind you will buy, when you want the best. By careful line breeding over a period of over 30 years, I have produced a strain of Barred Plymouth Rocks that has all the desirable qualities any fancier could wish for. My winnings at the greatest shows in America prove that they have the type and color that is correct. By careful selection this strain has developed utility features possessed by no other flock of Barred Rocks in America.

At Boston, 1915, in competition with the leading Eastern breeders in the 1st exhibit of Barred Rocks ever seen in Boston, they won 1st and 4th cocks, 1st and 2nd hens, 1st cockerel, 1st cockerel-bred hen and 1st pen, 1st and 3rd pullet-bred cocks, specials for best display, champion male, 1st colored male and female.

At the World's Fair, San Francisco, 1915, I entered a cock and hen and won 1st hen, 2nd cock, after shipping 3,500 miles.

At Chicago, I made a clean sweep two years in succession, competing with 654 birds, the "Aristocrats" of the West, including best display, champion male and female.

At New York, for 32 years they have won more prizes than any other strain. An entire flock of 21 pullets of this strain averaged 207 eggs in one year, again proving the superiority of my breeding method.

EGGS FOR HATCHING

From the World's Best Matings. 1 setting, \$10.00; 3 settings, \$25.00. Why not get the best. I guarantee satisfaction; write for my catalog of the Champions. It's free.

CHOICE STOCK FOR SALE

EVERFRESH EGG FARM

Box A

IONIA, MICHIGAN

TO OUR READERS.

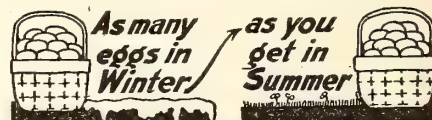

Again We Lead.

This issue comes to you with three special show supplements, namely: Madison Square Garden show, Boston, Mass., show and Greater Chicago show. This is a special feature that the American Poultry Journal inaugurated, following their rule of "leading and let the others follow." We sincerely trust that this issue will meet with your approval, and if it does, tell us so, for like everyone else a little boost spurs us on to greater efforts. These supplements, as you will note, are "chuck full" of unretouched photographs of the prize winning birds at these different shows and you, friend reader, are the main reason for us publishing them. You and our other subscribers are scattered in every country on the globe as far away as South Africa, you read and hear about these different shows and many of you, no doubt, have often expressed a desire to attend them, but time, circumstances, etc., keep you away.

You are interested in them—you cannot attend, we cannot bring the show to you, but we have done the next best thing. We have brought you real true to life pictures of the prize winners, unretouched photographs of these birds, just as the camera snapped them. In showing you these birds we have in mind that some time or other you will want to exhibit at these shows. As you have never attended them, you don't know just what type of birds capture the ribbons and you are at a loss as to just what type you are to breed for, if you want to win at the big shows.

These unretouched photographs solve the problem, they tell you more in one glance than you could learn by reading a dozen articles. Study them carefully, find wherever your birds are lacking, then go to work and breed accordingly.

Our artist, L. A. (Louie) Stahmer, whose perseverance and wonderful ability has made it possible for you to look upon exact reproductions of these birds, deserves a great amount of credit, and we leave it to you, friend reader. Which do you prefer, the pictures showing the wonderful skill of Mr. Stahmer, or those showing the painting ability of some of the other artists? Bear in mind, anyone can have a scrub retouched so that it will look like a prize winner, so in buying stock insist on being shown an unretouched picture of some of their birds. —P. K. W.

Hens lay winter eggs freely if fed chopped Green Bone. Follow the Experts for Success.

Stearns GREEN BONE CUTTER

Just the right food elements and cut fine enough for the smallest chicks. Fastest, easiest running cutter on the market. Hand or power machines for flocks of all sizes, \$6.00 up. T.O.M.CO.
TRADE MARK

Pearl Grit

Makes Hens Lay

THEY can't help it. It's full of egg-making ingredients. It furnishes the hen just what she needs—lime for the shell—sulphur and carbohydrates for the egg itself. Makes them lay better in winter as well as summer. It's the best and most economical grit money can buy.

Pearl Grit

Not only makes hens lay—it also keeps them in health. Pearl Grit serves the same purpose in a chicken's gizzard that teeth do in the mouth of a human being. It grinds up the food—aids digestion—makes the bird strong, vigorous, healthy and supplies color for most beautiful plumage.

Pearl Grit is especially valuable to hens during the molting season. It furnishes feather-making material as well as strength to lay and molt at the same time. No shells, lime, magnesium, etc., are necessary when feeding Pearl Grit. It serves a double purpose. Saves time, labor and expense.

We have issued a valuable booklet for poultry raisers. It tells how to cure many of the most common poultry diseases with the most common remedies. Also tells why Pearl Grit is such a practical food. Send for a copy today. A postal will do.

THE OHIO MARBLE CO., 10 S. Cleveland Street Piqua, Ohio

THE "COLLINS" IS THE BEST OATS SPROUTER

AND IT'S THE CHEAPEST \$3

You readers of the Am. Poultry Journal know as well as I do that it's essential to feed green food to

Make Your Hens HEAVY Winter Layers

You also know that in the form of sprouted oats you can furnish your hens what they need in the way of fresh, tasty, sweet and wholesome green food, and protein, at Less Cost than in any other form.

The only point in which you are interested is in knowing which is the most practical, sensible, workable, convenient and satisfactory sprouter. It's the "COLLINS"—made in units, eight individual pans of galvanized steel, 11x15 inches, a pan for each day of the week, and a drip pan. These pans fit ingeniously one on top of the other, doing away with the usual frame or stand. The pans are properly perforated to furnish exact amount of drainage to insure sprouting of practically every fertile oat, and to eliminate souring and rotting, and give a more uniform, prolific growth.

For \$3.00 I deliver The Collins Sprouter anywhere east of the Mississippi River, Express or Parcel Post charges paid by me. West of the Mississippi, \$3.50.

Try it ten days, and if it isn't satisfactory ship it back, and I will refund your money. Illustrated descriptive booklet free for writing.

We could use a few good agents. Write for territory.

W. H. COLLINS - 336-K Washington Street - NEW YORK

SPECKLED SUSSEX

The Coming Show Fowl of America

Great winter layers. The fastest growing fowl in existence, having the largest per cent of the finest flavored flesh to offal of any breed, making them the King of utility fowls.

At Quincy last November I won three blue ribbons on three entries—cockerel, pullet and pen.

I have two pens of this great variety from which I can spare a few eggs at \$5.00 per 15.

Pen No. 1, headed by 1st pen cockerel at Quincy and a son of last season's Crystal Palace champion bird.

Pen No. 2, headed by a son of last season's Buffalo winner.

These two males are mated to my Quincy winning females and daughters of Crystal Palace, Madison Square and Buffalo winners. Free mating list ready soon.

CHAS. A. SIMMONDS, SPECIALTY BREEDER, CAMP POINT, ILL.

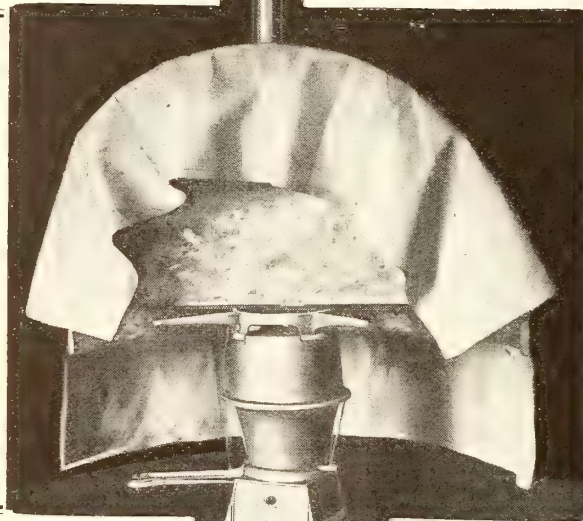

The Dandy Coal Burning Colony Brooder

The one brooder selling at a very low price that will do all that the higher priced brooders will do.

It isn't enough to hatch your eggs—the big thing—the thing that really counts—is to save all your chicks. And you can do it with the Dandy.

Burns Coal or Gas.

Coal Once in 24 Hours.
Think of the Labor Saved.

Built of Cast Iron
to last a lifetime.

Increased Profits.
No Lost Chicks.

Because we make no wild statements telling why the Dandy Brooder is better than others, don't think it is a cheap, flimsy brooder. It is far from that. We own a large commercial egg farm where all our models are tested. We use the same brooder we are offering you.

Our factory is equipped with the best up-to-date machinery run by water power. Skilled labor is cheap in this locality and our overhead expenses are small. The large saving over other manufacturers' costs goes into the construction of the brooder. Large volume of sales—small profit per sale is our idea.

\$15 Means Chick Insurance

Surely you will not let this amount stand between you and success. Write us for complete literature. We want hustling agents.

North Eastern Mfg. Company, Inc., Box A, Keeseville, N. Y.

ILLINOIS STATE SHOW.

About 1000 Birds on Exhibition—
Smaller Than Usual, but of
Excellent Quality.

By F. D. ROGERS.

FOR the first time in several years the Illinois State Show was held away from the capital city and the show this year held at De Kalb will go down in history as a very successful exhibition. The entries were somewhat smaller than usual. However, the quality shown was above the average. The men in charge of this year's show were an enthusiastic lot of fanciers and experienced show men. Mr. McCord and his assistants should have the hearty support and co-operation of all fanciers of Illinois and the Middle West.

Lectures were given several evenings

One of the pullet winners in that strong Barred Rock class, Boston, 1916. Note the snappy barring. W. W. Carpenter, East Providence, R. I.

during the week. Prominent among the speakers being Prof. Phillips of Purdue University, and R. C. Lowry, Mgr., Yesterday Egg Farms, Pacific, Mo., one of the best known and most successful poultrymen of this country, being a graduate of Cornell University. The lectures given by these men were indeed instructive and appreciated by the many present.

Among the prominent and interesting features of the show were the Barred Plymouth Rocks shown on display by S. N. Tremper, Sandwich, Ill. In a large roomy cage near the entrance was to be found his wonderful pullet, winning first

"What's A Capon and Why"

76 Page 6 x 9 inch BOOK that explains everything you will ever want to know about CAPONS. 50 pictures from life that show each step in the operation. List of Capon buyers addresses. MUSTARD

ITS RELATION TO POULTRY AND EGG PRODUCTION

is the title of a 32-page booklet we will send on request

It gives the interesting results of Capt. Ralph Allen's experiment in feeding Mustard to poultry, and other helpful information. It will introduce to you, without obligation.

French's Poultry Mustard

The Original Poultry Mustard in America

Used and endorsed by such prominent poultrymen as E. B. Thompson, Haldie Nicholson, C. F. Rankin, E. S. Aldrich, A. E. Martz and thousands of other satisfied customers. All testify as to its beneficial relation to an increased egg production, fertility, stamina and vitality, at a cost not to be considered with the results.

RED SUSSEX
bred and owned by
GENSEMER BROS. CRESTON, OHIO.

SILVER CAMPINE
bred and owned by
GENSEMER BROS. CRESTON, OHIO.

The champion Red Sussex of America today is without any question the bird shown in the above picture. He was first at the Panama-Pacific Exposition and won easy in hot competition at Cleveland after traveling 7,000 miles. He was bred and owned by Gensemer Bros., Creston, Ohio.—L. A. S.

The Silver Campine cockerel in the above picture won first at San Francisco and again at Cleveland. The fine modern type and the snappy clear barring is very much in evidence. Gensemer Bros. of Creston, Ohio, have been winning consistently with this variety for years.

this season at the Illinois State Fair, also at the Panama-Pacific Exposition, San Francisco. Mr. Tremper also had on display a wonderful pen that attracted much attention. The Barred Plymouth Rocks were the largest class of the exhibition. It would remind one of the Chicago Show to look down Barred Rock alley.

Prominent among the winners were: D. F. Palmer & Son, Yorkville, Ill., Mrs. Alex Hamilton, Petersburg, Ill., Laufer Bros., Millbrook, Ill., and the well known veteran, Mr. Geo. Walker of Polo, Ill. Palmer & Son made a wonderful win on birds that well deserved the honors. (Note the awards in this issue.) Mrs. Alex Hamilton's first prize cock bird

and champion was a real wonder. The first prize cockerel owned by Mr. Walker was outstanding and well placed. C. E. Robson of Sandwich, Ill., showed birds of good type and color.

White Wyandottes were shown in good numbers. Geo. Sanford's (of Wheaton, Ill.) hat was in the ring, winning first on cockerel, a bird that was one of the real

HARRISTOWN, ILLINOIS

sensations of the show, showing great type and color throat. Mr. Skinner of Sandwich, Ill., made a most creditable showing in this class. Mr. John C. Jakes of De Kalb, Ill., made a nice win in White Wyandottes. Good classes were shown in S. C. Rhode Island Reds, and Geo. Schoenhard of Freeport, Ill., made a very fine showing and a most creditable win. Mr. Greenwood of Geneseo, Ill., and Mr. Knodle of De Kalb, Ill., were among the winners in this class.

The Black Langshans shown by Mrs. Carr of De Kalb, were exceptional specimens, among the best that has ever been my pleasure to handle.

Good classes of White Rocks were shown. Messrs. Tyler & Lauck of De Kalb, Ill., and Law of Sheridan, Ill., showed birds of good quality and were well among the winners.

In Sussex—honors were divided between Field Bros. of Sheridan, Ill., and Tarbox Bros., Yorkville, Ill.

In Silver Wyandottes, of course, the Tarbox boys were the big winners, with another string of birds at Madison Square Garden, New York, the same week. We have never known these boys to show where they did not succeed in capturing a goodly number of the honors.

Buff Orpingtons were well represented. Mr. Kaup of Glen Ellyn, Ill., showed birds of very fine type and color and was well among the winners.

Black Orpingtons were not a large class, however; the birds shown by Chas. Tucker of Sycamore, Ill., were indeed wonderful specimens and he well deserves special mention for showing birds of this quality. Lea Munger of De Kalb, Ill., captured most of the prizes in Buff Leghorns on well shown birds. Mr. Munger is well known among Buff Leghorn fanciers, his birds having won in seasons past at the Chicago Coliseum and other prominent shows. He also received the honors in the Buff Wyandotte classes.

Mr. J. S. Bales of Springfield, Ill., a prominent fancier and real worker in many state shows in the past, was a prominent winner in Rose Comb Minorcas and Indian Runner Ducks. Mr. Bale's Minorcas are known far and wide and his winnings at this show were very good indeed. H. J. Curly, Sheridan, Ill., made a creditable win in Columbian Plymouth Rocks.

The classes of the water fowls and Sussex were not large. However, Mrs.

BIG PROFITS in Poultry

If You Know How. Get This FREE BOOK and Learn How

We have facts and figures on poultry culture that we want to put before every man and woman interested in raising chickens. Whether you are an old hand at the business or just beginning—whether you have been successful or not—whether you have an extensive poultry plant or are raising a few in a city back yard we have money making information for you. We want to show you how you can succeed and make a splendid income from poultry. We are the largest and best equipped exclusive poultry school in the world and we have in our course of 48 complete lessons made it possible for you to learn the poultry business in a scientific yet practical way.

2354 Eggs From a Pen of 10 Hens in a Year

In our lessons Director Quisenberry of the Mo. State Poultry Experiment Station gives you the methods he uses to secure such marvelous results.

He tells you how he got 2354 eggs from a pen of 10 hens in one year—he tells you how to build practical and inexpensive poultry houses—how to feed for a big egg and meat production—how to treat poultry diseases—how to make and breed—how to dress and market poultry. In other words you get all the knowledge necessary to make you a successful raiser of poultry. Nowhere else can you get such a course of instructions in poultry culture. No other school has behind it such of such prominence and experience in the poultry business. But send today for our Free Book "Dollars and Sense in the Poultry Business."

MODEL INCUBATORS WIN

The closer you investigate, the longer you compare and scrutinize—the stronger will your conviction grow that Standard Model Incubators win on every single point. 100% Hatches three consecutive times is the record. Safest, most convenient and cheapest to operate. Compare values—then note our prices:

GUARANTEED INCUBATORS \$10.00 to \$48.00

Every part—down to the thermometer—made by ourselves, under our own roof. Guaranteed absolutely without reserve.

Fire-proof Construction—Fume-Proof Heater

Each size inspected and labeled in our factory under inspector of Nat'l Board of Fire Underwriters—the strongest, broadest guarantee of reliability that exists. Means that you can operate a Standard Model in your dwelling—anywhere—and be absolutely SAFE. Means lower insurance.

Chestnut casing, the best and most durable possible. Outlasts others by years. Beautiful attractive finish. Safety lamp-rest and enclosure. Heater is gas-tight—heavy insulated walls. Hatches every fertile egg under all varying conditions and temperatures. Automatic, well balanced regulation—uniform circulation and ventilation—even temperature at all times.

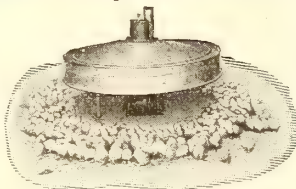

200-Egg American Standard, Only \$17.00

Built on the same correct principles. Fire and smoke-proof heater. Solid, durable construction. Double walls heavily insulated. Our own thermostat and thermometer. Guaranteed in every particular. Greatest offer in hatchers ever made.

OLD HOMESTEAD INCUBATOR

Hot Water Heated

120-egg is the only size we make, no other size is satisfactory. Hot water system alone does not solve moisture problem. Our design is perfect—ventilation, regulation and moisture correctly applied. Guaranteed.

Model Coal-Burning Hover

MODEL COAL-BURNING HOVER, Only \$15.00

This offer has never been equalled. Grows bigger birds in shorter time. Perfect combustion—self-regulating—self-cleaning—spark-tight and gas-proof. Cast iron, portable. Lasts forever. Saves coal and care.

Oil-Burning Chick Comfort Hover

Highest heating power with less oil and less care than any other hover. All metal—fireproof—dependable under all conditions.

128-page, New Poultry Book, "First Aid to Poultry Keepers" FREE. Valuable for laymen and successful breeder. Write for it today.

continue their string of victories by adding the Palace show Blue Ribbons to their list. This being State, National and Club show in this variety, brought out the best birds in this country, winning six regular and four special prizes. At Syracuse, Allentown and Hagerstown my birds won more first and special prizes than any other exhibitor. The judges claim my birds are the best colored and shaped birds they have handled. Fine green sheen with nice yellow legs and correct mottling are a few of their good points.

If in the market for the greatest egg producers in winter at the least cost of production or fine exhibition birds, write me. Good breeding stock reasonable. Booking orders now for eggs and chicks. Don't wait, but write today.

Tarbox's Silver Wyandottes

KELLER'S WYANDOTTES, Silver and Golden Laced Whites and Blacks

I have line bred them for 32 years; one of the oldest strains in America, and have won more premiums at Madison Square Garden, Chicago, Cincinnati, Cleveland, Columbus, and the three World's Fairs than any other five breeders. They have won for me several thousands of premiums during the past 30 years. The KELLER Strain is known the world over; they have the oval narrow lacing, size, shape and color that puts the KELLER stamp on every bird. We have hundreds of the finest show birds and high-class stock birds, as well as utility stock at reasonable prices; heavy layers. Some rare bargains this month. Rare, narrow laced Golden Sebrights. Large illustrated circular.

OUR COVER.

Emblazoning the cover of this issue of our Journal is a specimen of the S. C. White Leghorns that are bred and raised by Wilburtha Farm, Trenton, N. J. Wilburtha Farms are one of the largest breeders in the country, they have the "goods," and take pleasure in showing you a real picture of them, unretouched. Note his beautiful shape, remarkable carriage, the beautiful curved breast, and perfect sweep from head to tail, a real Leghorn in every way. It is no wonder Mr. Fisk (the owner) feels proud of him and justly he may, for we believe that you will agree with us when we say, that beyond a doubt he is one of the most perfect specimens of White Leghorns that it has ever been our pleasure to look upon.—P. K. W.

Central Ave. and 34th St., Indianapolis, Ind.

U. R. FISHEL,

Hope, Indiana

A poultry brooder invented by L. R. Oakes, of Tipton, Ind., has a novel method of distributing the heat from the heating lamp. The brooder has a horizontal radiation disk of metal extending from the hover compartment and also from the heating chamber. The air

STOP Chicks Dying In the Shell

Which poultryman

are you—the one that gets 500 chicks from 600 eggs—or one that gets 500 chicks from 1,000 eggs?

The EFFICIENCY and modern methods in other lines now apply to the hatching of chicks in incubators.

Your chicks die trying to burst the shell—or soon afterwards from white diarrhoea caused by being poisoned by the carbon-dioxide gas they throw off in the air they breathe. During the last three days of the hatch you can save practically every chick and make it vigorous so that it will resist chick ills by using the

Merkley Oxy-Vitalizer

to supply them with moist oxygen. Can be attached to any incubator in five minutes. Self-operating—no watching. One can be used for several incubators. Lasts a life-time. Multiplies your profits on every hatch. Write for free literature or better still write for a VITALIZER. The price is only \$3.50 parcel post prepaid, and it will buy itself in one hatching.

Merkley Mfg. Co.

209 Walton St.

SYRACUSE, N. Y.

within the hover compartment is heated by this radiating plate. The passage-way communicates with the heating chamber. To one side of the lamp and above this passage-way is a vertical flue to introduce a draft thru the heating chamber. The patent number is 1,167,013.

BOSTON POULTRY — SHOW —

THE GREAT BOSTON SHOW

THE 1916 Boston Poultry Show was widely advertised as "The Big Show"—well, it was *big*—big in number of entries, big in interest and attendance, big in quality, and big in the broad sense of good fanciership and good sportsmanship—a truly *big* show in all that the term implies.

The twentieth annual exhibition of the Boston Poultry Association at the Mechanics Building, Boston, Mass., January 11th to 15th, 1916, will go on record as the big show of the season. There were 3,019 regular single entries in the fancy poultry classes, 154 exhibition yards, 67 special displays, 176 singles in live utility classes, 46 separate entries in dressed poultry classes, 127 dozens in the egg classes, 306 entries of pet stock, and 2,476 entries of pigeons; making a grand total of 6,371, and to this should be added a special cat show, including 300 well-bred feline beauties.

Altho Boston is not noted for the mildness of its January weather, the weather man proved himself a good sportsman and turned out an unusually fine quality for show week, good bright days with plenty of sunshine, albeit there was variety enough, with a dash of rain and snow and mild temperatures spiced with one zero night. It was uncommonly gentle and kindly weather for a Boston Show week and it helped to bring out a large attendance from all over New England and Middle Atlantic States.

Secretary-Manager Winthrop B. Atherton—who is the friend of all exhibitors and "Billy" to fanciers everywhere—was right on the job as usual from start to finish of the big show, with a smile and a kind word for everybody and never a ruffled feather, no matter how busy or how exacting the situation. "Billy" Atherton has been a successful show manager in Massachusetts for more than thirty-two years, has been prominently identified with Boston Shows since 1887 and secretary-manager of the Boston Show since 1907. "Billy" is always a true fancier, a courteous gentleman and a loyal friend, an indefatigable worker for the pure-bred poultry cause, and the same "Billy" Atherton we have known for more than twenty years—success has not spoiled him, may his tribe increase and may his shadow never grow less.

One of the pleasing features of show week was the little surprise for Winthrop B. Atherton by his friends in the fancy, which was timed for Thursday afternoon when he was presented with a handsome gold watch, suitably engraved. The presentation speech was made by Secretary Charles D. Cleveland, of the Madison Square Garden Show. With the gift watch was a scroll signed by the donors which read:

"We, the undersigned poultry, pigeon and pet stock exhibitors, judges and fanciers, appreciating the long and faithful service rendered to the American Fancy by Winthrop B. Atherton, as Secretary and Manager of the Great Fanciers' Show, held at Boston, annually, as well as remembering his uniform courtesy and strict impartiality toward all, do hereby subscribe the amount opposite our names, for the purpose of providing a substantial token of our esteem, to one who has made the Boston Show a leader among

Twentieth Annual Exhibition of Boston Poultry Association at Mechanics Building, January 11-15, 1916

By Prince T. Woods, M. D.

the great feathered exhibitions of America and who has done yeoman service to maintain the highest ideals in Standardbred poultry culture of the United States.

"May the years of time Winthrop B. Atherton has devoted to the American Fancy in the great feathered exhibitors of America future."

Altho the subscription for the time-piece was started at the "Garden," never a whisper of it had reached "Billy," the gift was a complete surprise and, as he said, it broke him up completely, but he "came back" with a happy response. During the remainder of show week pretty nearly everybody he met insisted on asking "Billy": "What time is it?" Material appreciation of meritorious services at a time and place when it can be appreciated by the recipient, is certainly well worth while, and it adds much to the helpful human interest that makes this world such a desirable place to live in. As a visitor from the West, who had never before attended a Boston Show, remarked: "Say, this show is *different*, there is something about it that makes you feel good, glad to be interested in poultry. I'm glad I came."

The annual banquet tendered by the management to exhibitors and friends was held as usual at the Copley Square Hotel on Tuesday evening. The regular dinner to the Veteran Fanciers was given in one of the committee rooms of the show hall on Wednesday afternoon.

Among the veterans present were: I. K. Felch, Natick, Mass., 82 years; Howard B. Coffin, Newton, Mass., 76 years;

Fred A. Houdlette, Boston, 75 years; William H. Sylvester, Brockton, Mass., 68 years; Dr. S. Lott, Bellona, N. Y., 73 years; Frank C. Nutter, So. Portland, Me., 66 years; M. L. Ellis, Norwood, Mass., 66 years; H. B. May, Allston, Mass., 84 years; C. H. Colburn, Manchester, N. H., 63 years; W. J. Elliot, St. Catharines, Ont., Canada, 62 years; Geo. W. Weed, East Lee, Mass., 62 years; J. M. Perry, Brockton, Mass., 76 years; Frank B. Breed, Clinton, Mass., 81 years; Charles W. Richardson, Apponaug, R. I., 73 years; W. A. Cobb, So. Portland, Me., 63 years.

As usual the displays by manufacturers of incubators, brooders, supplies, portable houses, appliances and poultry feeds, made a fine showing and for variety of displays and space occupied presented a very creditable specialty show of this branch of the business. The leading poultry journals were represented at their respective booths and all reported very good business.

The exhibition of live utility poultry and of dressed poultry and eggs; together with the special exhibit of the Massachusetts Agricultural College, in charge of Prof. J. C. Graham, of Amherst, Mass., held in the basement, attracted large crowds of visitors. Here lectures on practical poultry topics were given several times daily and demonstrations given in various phases of poultry work. An egg candling booth was used to demonstrate quality in eggs. Included in the M. A. C. exhibit were coops of live specimens showing hens of high and low productivity and also of high and low fertility.

In the live utility exhibits were shown some very good specimens combining both beauty and utility as well as some of varying quality. As a whole the quality here from a Standardbred viewpoint was excellent and most of the specimens shown showed good strong constitutional vigor. This feature of the show is a valuable one and deserves to be encouraged. It proves a good "feeder" to the large fancy exhibition in the upper hall and we were told that a good many of the winners at this exhibit of last season were well represented in the regular fancy classes this season. One of the features of interest in the "utility classes" was the Black Langshan hen "Spok-Anne Maid," No. 62, the sex-control-bred hen as a prize for best Langshan article from an A. P. J. subscriber offered by Herb E. Sharp, of Spokane, Wash., and won by J. F. Robinson, of South Weymouth, Mass. "Spok-Anne Maid" is said to be the first hen that ever made the trip from Spokane, Wash., to the Boston Show. Her record as a sex-control specimen is 22 chicks from 28 eggs, 18 of the chicks pullets and 4 of them cockerels. She is expected to throw 70% or better pullets in her offspring and her performance the coming season will be watched with interest. Several judges of Asiatics pronounced her a good Langshan and an uncommonly good utility type hen. She was in fine condition after her long trip across the continent and reported as laying regularly since

**WHITE PLYMOUTH ROCKS
FIRST COCKEREL**

FIRST, SECOND, THIRD AND FOURTH PULLET
WINNERS AT BOSTON, JAN. 1916
BRED AND OWNED BY
W.F. HAYWARD, WESTBORO, MASS.

Study this unretouched picture carefully, take note of the amazing uniformity of type, it shows what careful and consistent breeding will do. Think of it! First, second, third and fourth pullet in a class of thirty-five birds and first cockerel in a class of forty-five. Mr. Hayward has been a consistent Boston winner for several years and every bird in his yards was bred by him. Address, W. F. Hayward, Westboro, Mass.

arrival and she won first prize in her class.

The displays of dressed poultry were uncommonly good this year and we hope to see more of them another season. Capons and soft roasters were particularly fine, an exhibit of well fattened pullets dressed as roasters and of some fine large soft meated cockerels also attracted a great deal of interest. More attention could well be given to the display of eggs. We believe that the eggs on exhibition should be labeled according to breed and variety and that this would greatly increase the interest and prove of educational value to visitors. Also it would seem advisable to place the awards on eggs according to quality as well as just size and color, and to give the candling test before making awards. Some of the eggs on exhibition looked decidedly ancient to us.

We believe that more attention could be profitably given to featuring the utility department at the Boston Show. It certainly was a great center of interest to visitors. Also, in listening to the comment of the crowds in both upper and lower halls, we noted that three questions are asked by the public more often than any others and regarding all exhibits. These questions are applied to the exhibits in practically all breeds and varieties and may be taken as an indication of how the public views poultry, they are:

1. "How old are they?"
2. "Are they good layers?"
3. "What is the color and size of their eggs?"

We heard visitors ask these questions many times at both big New York shows and at the big Boston Show. Isn't it quite probable that they indicate the trend of the public mind as regards poultry and that we would do well to at least attempt to supply this desired information at our big shows? In some exhibition and display cages baskets of eggs were displayed to show the product of the birds on exhibition and in every case such were centers of interest. The public is certainly very materially interested in a source of food supply—in meat and eggs poultry—as well as in fine feathers and the interest in a combination of the beautiful with the useful is decidedly on the increase. He is a wise fancier-breeder who pays careful attention to the development of this interest on the part of the public and it will certainly mean a worth-while improvement in the business when more breeders seek to breed for both beauty and utility. Fanciers do not sell a great deal of breeding stock to fanciers, for obvious reasons, but they must make sales to the general public and in order to stay in business will have to give the public what it wants. The present day situation in the development of poultry culture is worth considering carefully

and the signs of the times are worth noting.

Among the club meetings held at the Boston Show were: International Partridge Plymouth Rock Club, National American Dominique Club, Buff Orpington Club, New England Golden Wyandotte Club, American Water Fowl Club, New England Bantam Breeders, New England Turkey Breeders, The Hamburg Fanciers' Club, American Light Brahma Club, American Houdan Club, American Jacobin Club, American Oriental Frill Club, Exhibition Homer Club, American Pigmy Pouter Assn., International Magpie Club, and American Tumbler Club.

The judges at Boston were:

W. M. Anderson, Saratoga Springs, N. Y., Buff, S. C. Brown and Blue Leghorns and Spanish, Levi A. Ayers, Granville, N. Y., Columbian Plymouth Rocks, J. W. Bean, So. Braintree, Mass., Rhode Island Reds, W. H. Congdon, Oaklawn, R. I., Ornamental Bantams, Charles D. Cleveland, Eatontown, N. J., Columbian, Silver Penciled and Blue Wyandottes, J. M. Cutting, So. Braintree, Turkeys, J. H. Drevenstedt, Buffalo, N. Y., Hamburgs, F. H. Davey, Vineyard Haven, Mass., Silver, Partridge and Golden Wyandottes, James Glasgow, Mahwah, N. J., White Wyandottes, Herman Hoke, Spring Grove, Pa., Javas, Creve Coeur, Thoroughbred Games, La Fleche and Red Caps, J. P. Keating, Westboro, Mass., Light Brahmas, John Kriner, Stettlersville, Pa., Waterfowl, Wm. G. Minich, Carlisle, Pa., Cornish, Games and Game Bantams, Mrs. W. P. Masten, Pleasant Valley, N. Y., Polish, Haldie Nicholson, Leominster, Mass., White Plymouth Rocks and Sussex, Richard

(Continued on Page 327)

Fourth S. C. White Leghorn cock, Boston, 1916. Note the length of back and large well spread tail. An ideal Leghorn in every way. Bred and owned by Willow Tree Farm (McKean Bros.), Beverly Farms, Mass.—P. K. W.

A pure white bird, with rich yellow shanks and bright red comb, wattles and ear-lobes. As near perfect as can be bred. First White Rock cockerel at Boston, 1916. Bred and owned by W. F. Hayward, Westboro, Mass.—P. K. W.

First pen male in White Wyandotte class, Boston, 1916. There were ten pens entered, so one can judge just what this win means. The females were of the same fine type. Bred and owned by J. W. Andrews, Dighton, Mass.—P. K. W.

A very handsome bird, perfectly white, up to Standard in every way. Easy winner of first White Wyandotte hen, Boston, 1916. Bred and owned by J. W. Andrews, Dighton, Mass.—P. K. W.

Champion Gladstone. First cock in S. C. Reds at both Madison Square Garden and Boston, 1916. Also winner of championship at Boston. The strong Red class at these two shows tells how perfect he is. Bred and owned by Rock Ledge Farm, Southborough, Mass.

The type of S. C. Rhode Island Red pullets found in breeding pens of Rock Ledge Farm, Southborough, Mass. A bird bred by them and exhibited at Boston, 1916.—P. K. W.

First White Leghorn cockerel, Boston, 1916. A bird that brought forth a great amount of favorable comment. Excellent type, pure white in color. Owned by Owen Farms, Vineyard Haven, Mass.

Male bird of first pen S. C. Buff Orpingtons, Boston, 1916. Even shade of rich golden-buff thruout, with hackle and saddle richly glossed. Owned and bred by Owen Farms, Vineyard Haven, Mass.—P. K. W.

First Partridge Wyandotte pullet, Boston, 1916, also first at Cleveland. A perfect penciled bird with ideal slate undercoloring and bright yellow shanks and toes. Bred and owned by Sheffield Farm, Glendale, Ohio.—P. K. W.

Truly a Barred Rock in every way. Almost perfect in type and color, with barring brilliant and snappy in every section. One of winning pullets at Boston, 1916. Bred and owned by Grove Hill Poultry Yards, Waltham, Mass.—P. K. W.

A beautifully colored bird thruout. Winner of first Partridge Wyandotte cockerel at both Boston and Palace Show, N. Y. Owned and bred by Sheffield Farm, Glendale, Ohio.—P. K. W.

As perfect a Columbian Wyandotte as was ever bred. This is the male bird from prize pen, Boston, 1916. Bred and owned by Gilbert Poultry Farm, Haverhill, Mass.—P. K. W.

World's Champion. Winner of first and champion Barred Rock hen at the World's Fair, 'Frisco, November, 1915. Bred and owned by A. C. Hawkins, Lancaster, Mass.—P. K. W.

First White Wyandotte pullet in a hot class, Boston, 1916. A well curved bird thruout, broad, deep round breast, short tail, short broad back. Bred and owned by White Wyandotte Poultry Yards, Westborough, Mass.—P. K. W.

Note the short, broad back and deep round body, together with short stout thighs. Winner of second White Wyandotte cockerel, Boston, 1916. Owned and bred by Mirimichi Poultry Farm, Foxboro, Mass.—P. K. W.

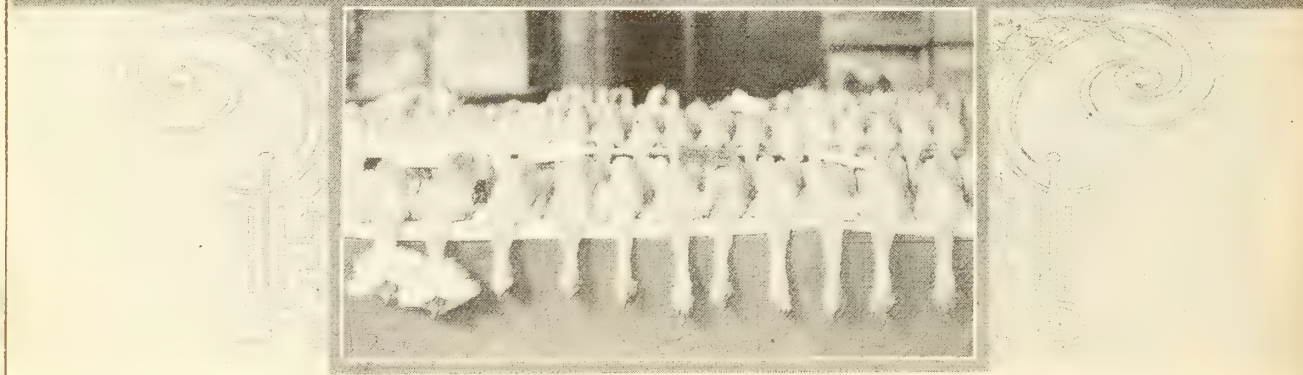

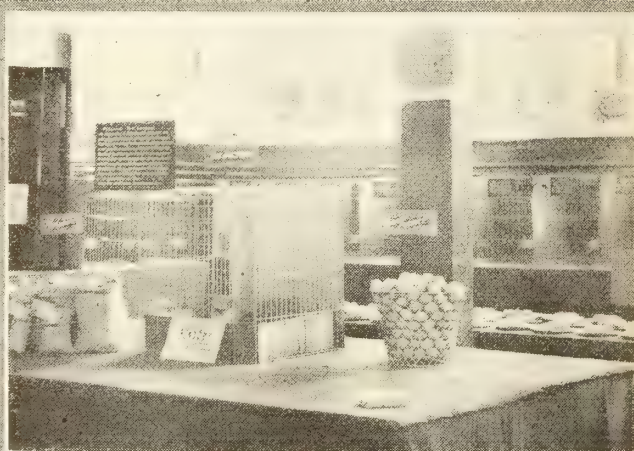

At Madison Square, 1916, in a class of twenty-six birds, this bird captured second White Rock pullet. Good broad back, full, well rounded breast, fairly well spread tail. Bred and owned by Mirimichi Poultry Farm, Foxboro, Mass.

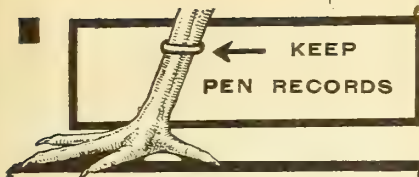

This year was no exception to the strong Barred Rock class always shown at Boston. A win there means something, as competition is very keen. This is the first hen, bred and owned by C. H. Latham, Lancaster, Mass.—P. K. W.

Third White Rock hen, Boston, 1916. Excellent type and color, not in condition when judged. Owned by Branford Farms, Groton, Conn.—P. K. W.

Three views of the utility department of the Boston Show. This department is conducted in the basement away from the fancy show. Here they bring utility birds, eggs and dressed poultry to compete the same as the fanciers do. It is a proven fact that in many cases people who exhibit in the utility department one year, the following year finds them exhibiting in the fancy department.—P. K. W.

Mechanics Building, with its several acres of well lighted floor space, is an uncommonly fine place to hold a poultry exhibition. The cooping is all at the same level, no double tiering, the aisles are of comfortable width and every specimen is shown to advantage. We believe that the first poultry show to be held in Mechanics Building was in 1887 and the second in 1888 and that W. B. Atherton was on the committees that conducted both of these exhibits. At that time the exhibition hall was surrounded by marshes and considered very far out of town. Today it is practically in the heart of the city. In 1890 the Boston Show was held in the old Music Hall, a few blocks from the Park and Tremont streets end of historic Boston Common, and this show was under the direction of W. B. Atherton, who was then president of the Massachusetts Poultry Association.

The Boston Poultry Association suc-

NONPAREIL STRAIN

A vast number of show specimens now ready. Write me your needs.

S. G. McLEAN - SO. GLASTONBURY, CONN.

ceeded the old Massachusetts Poultry Association in 1894 and was incorporated in February, 1895, and held its first annual show at the Mechanics Building January 14th to 17th, 1896. Arthur R. Sharp was superintendent of this show, and the total specimens on exhibition was given as 4,015. The exhibit of dressed poultry and eggs by Boston marketmen was a remarkable one. The second show was given the last week of January, 1897, under the same management, having a premium list totaling \$6,356, and there was a considerable increase in the number of specimens shown. The dressed poultry and eggs exhibit was held in the upper hall and was one of unusual merit. The 1898 show was held January 18th to 22d under the superintendence of T. Farrar Rackham and was truly a wonder show in both number and quality of the

The oldest species of chickens in this country, the American Dominique. A grand old fowl that lay and pay. This is first pullet at Boston, 1916. Bred and owned by C. W. Besse, Jefferson, Maine.—P. K. W.

Standardbred exhibits and in the fine display of dressed poultry and eggs. The cash prizes totalled about \$6,000. The show of 1899 was another big show of quality Standardbreds, and included one of the finest and largest exhibits of dressed poultry and eggs that has ever been shown in Boston, and so it goes, Boston Show has ever been a big show and a good show. The total entries as shown by the catalog in 1896 was 3,157, which compared with the 6,371 of 1916 shows a very comfortable increase in two decades. The dressed poultry and eggs exhibit of recent years is not up to the number of entries of earlier shows but it certainly shows remarkable excellence in quality, and we hope that the quantity will increase.

The 1916 Big Show showed splendid Standardbred quality running well thru all of the classes. Asiatic classes, while not showing the strength and numbers of earlier shows, have made considerable improvement over the showing of recent years and there is every indication that the heavy breeds are coming back strong and with fine quality.

Light Brahmas, a grand display of fine type and strong markings with the winnings well distributed among the exhibitors; 16 cocks, 20 hens, 31 cockerels, 27 pullets, 12 pens. Dark Brahmas, small classes but quality good. Buff Brahmas, one pen. Buff Cochins showed some wonderful quality, color, type and

feather; 6 cocks, 7 hens, 6 cockerels, 6 pullets, 3 pens. Partridge Cochins appear to be coming back strong with some old-time color quality and good type; 6 cocks, 8 hens, 6 cockerels, 7 pullets, 3 pens. White and Black Cochins, small exhibits. Black Langshans, some splendid quality in size, type and color; 7 cocks, 7 hens, 9 cockerels, 9 pullets, 2 pens. One excellent pen disqualified because of a tiny side sprig on one of the females. White Langshans, small exhibits and quality only fair.

Barred Plymouth Rocks, a remarkably fine exhibit and one of the centers of interest of the show; 22 cocks, 18 hens, 42 cockerels, 21 pullets, 4 pens. Pullet-bred cocks, 6; cockerels, 9. Cockerel-bred hens, 9; pullets, 10. Cockerel-bred pens, 5. Pullet-bred pens, 2.

White Plymouth Rocks, a grand display of good quality and type; 24 cocks,

One of the attractions at Boston Show was a display pen of Japanese Silkies—this is one of them. Bred and owned by W. B. Atherton, Randolph, Mass.—P. K. W.

23 hens, 45 cockerels, 36 pullets, 8 pens. Buff Plymouth Rocks, another quality class, with fine color and type; 11 cocks, 7 hens, 13 cockerels, 11 pullets, 1 pen. Partridge Plymouth Rocks, good strong classes; 13 cocks, 15 hens, 18 cockerels, 19 pullets, 3 pens. Silver Penciled and Columbian Plymouth Rocks, small classes with some good quality.

Silver and Golden Wyandottes, some splendid quality and classes just sufficiently well filled to take care of the awards. White Wyandottes presented a remarkable exhibit with fine quality running thru the classes, winnings as a rule went to birds of splendid type and good substance; 23 cocks, 32 hens, 42 cockerels, 36 pullets, 10 pens. Buff Wyandottes excellent in type and color; 11 cocks, 12 hens, 22 cockerels, 13 pullets, 5 pens. Black Wyandottes, small classes. Partridge Wyandottes, good in color and type; 7 cocks, 8 hens, 7 cockerels, 7 pullets, 2 pens. Silver Penciled Wyandottes, quite well filled classes and excellent quality. Columbian Wyandottes, good in type and markings; 9 cocks, 11 hens, 11 cockerels, 10 pullets, 3 pens.

Javas, small classes of birds of excellent size.

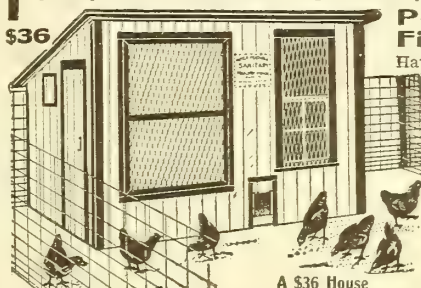

American Dominiques, some excellent specimens of good type and color; 4 cocks, 5 hens, 5 cockerels, 6 pullets, 1 pen.

DON'T KILL or sell your laying hens

Use the **Potter System** and pick out the layers from the loafers and diseased hens. Keep only healthy laying hens. The **Potter System** is a secret and the greatest discovery of the century in the poultry world on the subject of Egg Producing Hens. Used by over 50,000 satisfied poultry keepers, who are saving dollars every year. Our new 100-page **Potter System** book. "**Don't Kill the Laying Hen**," contains the secret and knowledge about laying and non-laying hens. It's a revelation to poultry keepers, and you will learn how you can use the **Potter System** on your flock, keep less hens, get more eggs and make more money using it. Write today, sending two red stamps to cover postage on our large catalog and circular telling all about **Potter Poultry Products** made for Particular Poultry People. If you are particular and want to make more money on your flock, you will write us today.

DON'T BUILD You can buy better, cheaper, more complete ready (factory) made hen-houses, roosting and nesting fixtures, coops, etc., from **Potter & Co.**, because they buy lumber in carloads, cut and fit all parts perfectly by automatic machinery and deliver the house, coop or fixture you need in convenient sections all ready to set up.

No. 5, Style "D" Potter portable open front fresh air, scratch shed house, equipped with No. 17, Style "A" 5-ft. 3-perch complete henhouse outfit for 30 hens. Price of complete house, \$36.00. Painted 2 coats.

Send for Our Big Catalog

Contains 132 pages and over 150 illustrations showing Potter portable houses, coops, henhouse outfits, feed hoppers, brooders, hovers, feeds, etc.—in fact everything the poultry keeper needs to insure the greatest success. Catalog mailed for two red stamps to cover postage. Write for it today and save money.

POTTER & CO., 10 Forest Ave., Downers Grove, Illinois, U. S. A.

Potter Poultry Houses and Fixtures— Portable, Sanitary, Inexpensive

Have been on the market for over ten years and are used and recommended by thousands of poultry keepers who want the best and buy the best in poultry houses and equipment. You start right when you buy a Potter portable with complete outfit of roosts, drop board and nests. A clean, sanitary house means healthy hens and lots of eggs. The fresh air sanitary house shown here is only one of the twenty styles of houses and coops we make ranging in price from \$3.50 up and everything we make is absolutely guaranteed.

No. 19, Style "A", 6-ft. 3-perch complete Potter henhouse outfit for 36 hens. This same style made in 12 sizes.

EASY WAY TO GET EGGS

Use "**OCULUM**," the CELEBRATED NEW DISCOVERY which has stood a United States Government test at Washington, D. C.

"I was getting 20 eggs a day when I began using **OCULUM** three weeks ago. Today I got 300." D. B. MCNEILL, Cunningham, W. Va.

"I am running 2000 hens and I find **OCULUM** just the thing. Used in feed, it works like a charm." F. C. MITCHELL, Santa Rosa, Cal. Dec. 4, 1915.

A drop a day for each hen in **The Feed**. THAT'S ALL. Trial bottle (240 doses) 10c. BOOKLET FREE.

H. I. COMPANY, Inc. - Box B - SALEM, VIRGINIA
Dealers handle it. "**OCULUM**" birds stay well at shows.

EUREKA

PRICE-QUALITY-EFFICIENCY
A GREAT COMBINATION

The EUREKA Colony Brooder Stove

Don't be afraid of this stove on account of the price. It is made by a large stove manufacturer and sold on a stove manufacturer's basis of profit. I am satisfied with the low profit, and you get the benefit.

Solid Cast Iron, Two Sizes

\$11.00—15.00

The Stove with the Corrugated Fire-Pot

Why pay double that amount when at this price you can get a stove that is just as efficient and durable as any made.

There is nothing cheap about this stove except the price. I am a large manufacturer of stoves, and there is not a more durable stove made in my foundry at any price.

SPECIFICATIONS

	No. 1 Capacity 500 Chicks	No. 2 Capacity 1,200 Chicks
Height to top of stove.....	20 in.	23 in.
Height to top of magazine.....	26 in.	30 in.
Diameter of cylinder.....	11 in.	12 in.
Diameter of hover.....	42 in.	52 in.

Duplex grate, which stirs up the fire when shaken, and cleans out absolutely.

No dampers in smoke pipe to throw back gas.

Fire regulated by thermostats, which open and close check draft on top of stove.

Magazine on top, which adds to the coal capacity and heating surface.

Bottom of ash pit is raised 3 in. from the floor, and has asbestos board insulation.

Ash-pit door hinged, which prevents breakage and being misplaced; fire-pot is corrugated, which adds to the weight and strength. The stove is self-regulating and requires absolutely no attention, except coaling once in 48 hours and raking once in 24 hours.

The hover has a cast-iron ring on top, which sets firmly on top of stove, and furnished with wire hook, to which pulley may be attached to raise hood.

Burns hard coal or natural gas, as ordered.

BUILT FOR THE COMFORT OF YOUR FOWLS

Our poultry houses are built—not machine made, that fall apart after a year's use. We use the best lumber obtainable, buy in car load lots, and for that reason we can sell you a house already built, considerably cheaper than you can make one.

FOWLS are LIKE HUMANS

If you spend the night in a poor bed you can't do as good work next day. If you have your fowls in a make-shift house, they cannot keep in condition for either laying or showing. House your birds properly and you will find the egg yield increasing and your birds looking much better. Proper housing means the "Perfection Way." Write for our catalog, it is free.

Wilburtha Poultry Farms say

We find Carbola superior in its use for painting, and, as a disinfectant it gives very satisfactory results.
(Signed) Wm. H. Carr
Manager

Poultrymen, take a tip from the experience of this great poultry farm. Winning poultrymen use the best disinfectant to safeguard their flocks. Their hen-houses, coops, pens, runs, roosts are made clean and sweet with Carbola, in solution—applied with brush or sprayer. Incubators, brooders, nests are kept sanitary with it. Their best hatches and comfortable, healthy baby chicks are obtained with the use of germ-killing

CARBOLA

Birds that will thrive and win for you should be protected also by this snow-white mineral paint combined with the most powerful germicide. It is 20 times stronger than carbolic—yet absolutely safe. Makes happy birds and healthier chicks by quickly destroying lice, mites and other parasites. Prevents introduction and spread of roup, cholera, glanders and other contagious diseases. Every poultryman should use Carbola. Once used, always used. At least give it a trial on one of your coops. Send at once for

Trial package—25c—paints and disinfects 300 sq. ft.
10 lbs. (10 gal.) for \$1.00 plus delivery charges
20 " (20 ") " 2.00 delivered
50 " (50 ") " 4.00

Carbola will paint health and sunshine into your whole plant. Easily applied. No chipping or flaking off, as with white-wash. Retains germicidal strength for months. Your dealer will supply you. If not write us. Send for trial package anyway, today.

Buy The GEM---The High Per Cent. Hatcher

Insure yourself against disappointment and loss in your hatching. The Gem is the machine either for the beginner or the most experienced.

25 Years Highest Success and Efficiency Record

None better regardless of price. Big hatches are not the real test. How many chicks live? THAT'S the point.

Gem chicks are always lively and thrive, because our unique system of ventilation conserves the natural egg-moisture. You "old timers" know this is so.

Walls, six-ply, with four layers of insulation. Air-tight doors. Gem is built of cypress, the "wood eternal." Our exclusive Hot-Water Heating System of cold-rolled copper (note that) distributes and equalizes the warmth perfectly. Extra sensitive Double-Wafer Regulator controls temperature absolutely. Removable Chick Trays make thorough cleaning easy. Flush top—no obstructions—handy for turning eggs, etc. Many more desirable and exclusive features explained fully in big handsome free catalogue. Get it; also our special offer, and "How To Buy an Incubator," and save money. Write today

"Lice are as common to chickens as fleas to a dog."—LEE'S "COMMON SENSE CHICKEN TALK"

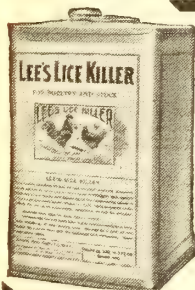

I have many times gone into poultry yards, whose owner said, "My hens have no lice," and taken from 100 to 500 lice from one hen, using Lee's Lice Killer. Lousy hens don't lay well. Lousy parent stock bring weakly fertile eggs and sickly chicks. Lice and mites seek the warm bodies during winter and in spring will travel a mile to get at young chicks. Clean up and urge your neighbor to clean up, now. With Lee's Lice Killer there is no dusting, dipping, greasing or handling. Simply painted or sprayed on roosts, etc. It kills both by vapor and by contact. It gets the lice on the bodies of chickens roosting over it, also the insects causing "scaly leg," also the mites and lice about the roosting places.

The Lee products—Lice Killer, Germozone, Egg Maker, etc., are sold by dealers most everywhere, generally one dealer at each town. Full particulars, catalogue, poultry book and name of nearest agent sent free on request. Write today.

Poultrymen, Increase the Value of Your Flock

in poultry yard and showroom. Infuse into it winning Wilburtha blood. Our birds are bred to lay, to pay, and to win. Our strains have been improved to the highest degree, for utility and show purposes, by careful selection, mating, and every good practice known to us, as experts of many years' experience. Nowhere have we spared a dollar or an ounce of labor to attain the highest standard. Every feature of our model plant contributes to the health and excellence of our winning birds—from the best type of buildings, to the best disinfectant to keep them bright and sanitary. Fine birds, well cared for, win for us. They will win for you, too. Pay us a visit and make your own selection of the famous

Wilburtha S. C. White Leghorns

—perhaps the greatest of our strains. Over 3000 birds, choicest specimens, both male and female. Bred for utility and exhibition purposes. Large, early maturing, and heavy layers. Chicks mature rapidly. Excellent table birds at exceptionally early age. Our S. C. Whites are always in the ribbons. They won at

Wilburtha S. C. R. I. Reds

—a breed to which we are giving special attention. Ours is a likely strain, and is making good. We have some splendid specimens of both sexes, at attractive prices. We did not show them at the Palace or Garden this year.

Eggs For Hatching

selected with the greatest care, and rigidly inspected for uniformity and fertility, are sold under our liberal guarantee. Order these and be sure of a good hatch. You do not experiment when you start with our hatchings, eggs or baby chicks.

Baby Chicks

of all our famous strains are ready. These hustling day-olds are from pens carefully mated for best results. Behind them is the remarkable record of older Wilburtha birds. Lively, vigorous—they give assurance of a valuable future. We have also chicks from special matings, at attractive prices.

Make this a season of improvement and greater profits—in table eggs or birds, quality matings, better hatches, winnings at the shows. Wilburtha birds are making greater profits for us, and for our hundreds of customers. They will make good for you. Don't fail to get in touch with us before you buy. Our new mating list is ready. Send for it and our handsome catalog today.

Fresh Air for Chicks

Automatic Regulation

Fresh air passes thru Feeder and is warmed before it reaches the chicks. Thermostat automatically opens or closes fresh air inlet, allowing air to pass in only when temperature is right or too high. It keeps the fire burning on warm days, and makes the chicks thrive and grow. Write for circular, Dept. 2, MACKAY COLONY BROODER CO., Lock Box 182, Syracuse, N. Y.

PALMER'S BARRED ROCKS

Considered the greatest Chicago winners by their unparalleled victories almost every year for the past fifteen years. Our latest victory at the great Illinois State Show against some of the greatest birds in the West, winning three out of five champions, four firsts, two seconds, three thirds, three fourths and one fifth, with four specials and best display. Barred Rocks will go down in history as one of the greatest wins any Barred Rock exhibitor ever made at a State Show. Write for our bargain sales sheet and new free illustrated catalog. If you are looking for show birds, breeding birds, pullet bred or cockerel bred, single or in pairs, trios or pens, we can furnish you them at prices that will be a surprise to you. Remember, we not only ship on approval but will guarantee them to please and breed to your satisfaction. Write us; stating what you want, and we feel certain we can please you. Nearly every breeder in the West has been our customer. If we can please them, we can please you. Write us today. D. F. Palmer & Son, Box 35, Yorkville, Ill.

Howison's Buff Wyandottes

"Buckeye"

"The Best Incubator Made"

The System That
HATCHES MORE CHICKS
AND
HATCHES BETTER CHICKS

Than any other incubator regardless of size, price or method.

Recognized by the largest breeders and the largest poultry supply dealers as the safest and surest incubator ever built. Every machine a guaranteed success.

FOR THE BIG BREEDER the 600 egg "Buckeye" will produce more chicks and stronger chicks than any big incubator you ever owned. We guarantee that. Operated with one lamp on a quart of oil a day and guaranteed to work perfectly in any temperature down to freezing.

FOR THE SMALLER BREEDER any of the other six sizes are guaranteed to do everything the big machine will do. Even the little 60 egg "Buckeye" at \$7.50 will hatch more chicks and better chicks than any other incubator—no matter what its cost.

It's the Best Incubator Made

Not the cheapest incubator but the best.

It's the incubator that is built UP to a standard and not DOWN to a price. That's why the "Buckeye" is sold by more reliable dealers than all the others combined—that's why so many of the large, successful breeders will use no other. The "Buckeye" is sold by more than two thousand of the largest poultry supply dealers and there are over 400,000 in successful operation! Let us send you a list of some of the big breeders who use the "Buckeye" and their reasons for using it. Let us send you the names of the largest dealers and their reasons for selling it. Let us tell you about the wonderful success of the "Buckeye" system and why so many have tried to imitate it. The "Buckeye" is made in seven sizes—60 eggs to 600 eggs.

600 Eggs	-	-	\$50.00
200 Eggs	-	-	17.50
110 Eggs	-	-	12.50
60 Eggs	-	-	7.50

SOLD ON 40 DAYS TRIAL

and guaranteed to hatch every hatchable egg.

Try a "Buckeye" in the same room with any other incubator and if it doesn't hatch more chicks and better chicks the first time you try it we'll take it back.

Write for "Buckeye" Catalog and Proof of "Buckeye" Superiority

The Buckeye Incubator Co.

501 Euclid Ave.

Note: Prices are a little higher west of the Rockies on account of freight rates.

The Standard

COLONY BROODER

Broods
100 to 1500
Chicks

Only
\$15.00

The Greatest
Coal-Burning Brooder
Ever Invented

Self Feeding—Self Regulating—Everlasting. Heavy cast iron stove that requires coaling but once in 24 hours in any temperature.

Fifty-two inch hover that will positively brood 1500 newly-hatched chicks.

30 Days Free Trial

The "Standard" Colony brooder is the most practical brooding device ever invented. It will do anything and everything that any other brooder will do and do it better. It is infinitely more satisfactory than brooders selling at twice the price. We are so positive that it can not fail that we will permit you to try one for thirty days and

**Write Your Own
Money-Back Guarantee**

Sold and guaranteed by dealers everywhere at \$15.00. Insist on the "Standard" and beware of imitations. Write us for a "Standard" Catalog and we will tell you how to grow three chickens where one grew before.

Compound Incubators Get Bigger Hatches

Any Place—Any Time—Any Climate

These famous Metal covered machines make big money every year for poultry raisers. High quality material, superior construction, simplicity and ease of operation all combine to give the greatest hatching value.

Don't Pay
Two
Prices

In this incubator you get the greatest hatching value at the lowest possible price. Will last a life time.

C. P. Shirey writes: I hatched 220 chicks from 222 fertile eggs. I have not done this with any other machine and I have tried a number.

Made in All Sizes

FREE 1916 Catalog FREE

Don't buy an incubator anywhere at any price until you get our new 1916 catalog and rock bottom prices. You owe it to yourself to know all about this wonderful incubator. Write today—sure.

SPRAGUE, THE OLDEST BREEDER OF REDS IN ILLINOIS

Everything that goes toward making fine Rhode Island Reds can be found in my flock. My birds have the type and color that is demanded by the leading judges of this country. Particular attention is given to the utility value of each and every bird and a specimen that does not make good all around will not be tolerated in my yards. Right now I have a

SPLENDID LOT OF Cockerels

for sale. They will improve your strain wonderfully. I will sell them at reasonable prices. If you want to start a new flock or strengthen the stock you already have, send me your order for some eggs this spring and raise some good birds for breeders in 1916. My circular will tell you how I am in a position to give you better value for less money than any other breeder. I guarantee satisfaction.

Don't fail to send for my Free Circular.

Makes 'Em Turn up Their Toes Mighty Quick

There isn't a ghost of a show for lice and mites on hens, chicks or nests after a dust with the old reliable Lambert's Death to Lice. It knocks 'em stiff in a jiff. As one of the big successful poultrymen wrote us, "It is impossible to get along without your louse killer," so it is with every user. There's nothing so efficient.

Don't Experiment

Follow the example of the leaders—ask any successful poultryman which lice killer has been the standard for 30 years—which is acknowledged BEST. He will tell you to

Get
Lambert's
OLD
RELIABLE
DEATH
TO
LICE

because he
has found
it **always**
the **BEST**.

Don't expect to make your hens pay and permit lice to worry and annoy them. The lice will get the profit and often the hens and chicks, too. A few cents invested in Death to Lice will bring dollars in profit. Just the thing for layers, sitters, and exhibition stock. Will not injure eggs, chicks or hens or soil plumage. Get a 5 oz., 10c box at dealers to try (or send us direct if he can't supply you). Other sizes 25c, 50c and \$1.00. Lambert's Latest copy of "POCKET BOOK OF POINTERS," a valuable book for poultry raisers. Mailed for 2c stamp.

LESS FEED

Hatch Chicks The Modern Way

Hatch 'em
by electricity

This energizing force enables you to hatch chicks with but a fraction of the labor and risk involved in operating other machines.

The control of heat, moisture and ventilation is absolutely dependable. No guessing, no watching, no filling of lamps and trimming of wicks. The operation is perfect and insures a strong, vigorous chick from every hatchable egg.

Lo-Glo Electric Incubators

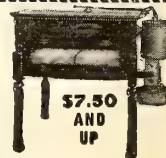

Make the hatching of chicks a real pleasure. These perfect machines are all metal, fireproof, odorless, sweet and sanitary. Handsomely finished and may be operated in any room, store or office. Many users place them in the parlor or dining room. They're simple, practical and efficient. Sizes from 50 to 400 eggs. Successful, no worry, hatching insured by doing it electrically. Fully explained in our booklet.

Lo-Glo Hovers successfully carry on the splendid development of chicks started in the right way by our incubators. Sizes 50 chicks and up. Write for free booklet J.

Lo-Glo Electric Incubator Co., Inc.
76 Greenwich Street - New York, U. S. A.

H-I Incubators

have solved the one real problem in incubation—that of automatic moisture supply. Without opening incubator door, moisture is supplied, making egg shells brittle and increasing hatch. Send for Catalog.

100
CHICKS
\$8.50

International Sanitary Hovers

have proved their worth and efficiency by thousands of endorsements. Use in any building, dry goods box or piano box. Made of metal, it is always sanitary. Circular—no crowding, no smothering, warmest just inside the curtain, costs only 1/4c. a day for fuel. Burns oil or gas. Send for full description.

Hover-Incubator Mfg. Co.
Box 51 Browns Mills, N. J.

You won't have to sit up nights with
your machine if you use an

Esco Electric Incubator

The automatic electric regulator, when once adjusted, keeps the temperature just right without attention. No danger. No dirt. No fumes. Esco Electric produce better hatches. Our catalog tells why. Let us quote on your mammoth requirements.

CONVERT YOUR LAMP MACHINE TO ELECTRIC HEAT.

We will furnish the electric resistance coils, automatic regulator and all supplies and instructions necessary to make the change. Anyone handy with tools can do it in a few hours with a hammer, screw-driver and brace and bits. When writing for prices give manufacturer's name, egg capacity and kind of heat.

CAUTION: Any Bone Cutter claiming to be MANN'S without F. W. MANN CO. cast on its surface, is an imitation. The genuine MANN'S is made only in Milford.

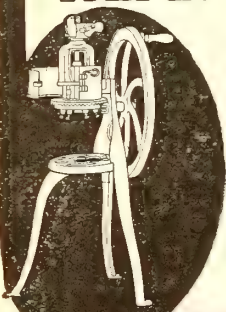

Make Your Hens Lay

Write today for our free poultry books and learn at once what it might take you, alone, years of costly experience to find out. You know how eager fowls are for bugs and worms. Our book tells why. Briefly, it's the animal food they want, and **must have**, in order to thrive best. Chicks, laying hens, corks, all need it—to develop frame, muscle, feathers, to produce many eggs, to produce fertile eggs. To replace bugs and worms in winter, or, for yarded fowls, feed freshly cut raw bone, prepared with

MANN'S LATEST MODEL BONE CUTTER

Try One Free—No Money Down

This feed is four times richer in protein (the egg-making, body-building element), than corn is, and it is more easily digested and assimilated. **Save** money by cutting down your grain ration. **Make** money by getting more eggs when eggs are worth most and by having better eggs for hatching stronger chicks, earlier and heavier broilers.

Mann's Latest Model Bone Cutter cuts the bone (and all adhering meat and gristle) into a fine, soft mash that fowls of all ages relish and can put to immediate use in producing profit for you. It turns easily, cuts rapidly, never clogs, wastes nothing. We sell it on **10 Days' Free Trial**, without money or deposit in advance—so you may be sure it is right. We even pay its freight back if you are not satisfied.

WRITE FOR FREE BOOKS TODAY. To read them is to know how to feed poultry for most profit.

Cyphers Foods and Cyphers Methods Insure Success with Poultry

A Properly-Balanced, Easily-Digested Food for Hopper and Wet Mash Feeding. Gives Maximum Egg Yield. Write for prices.

A Well-Granulated Mixture of Grains and Seeds. Is Correctly Balanced for Best Results.

FOR twenty years we have studied the problems of poultry feeding. On our \$85,000, 50-acre Experiment and Demonstration Poultry Farm we have tested different methods—proving or disproving different theories and claims—weeding out the worthless and holding fast to that which is good. This work has been done with the object of benefiting—of instructing and advising—Cyphers Company customers.

Cyphers Company Has Solved the Three Problems of Greatest Importance to Poultrymen

FIRST—How to reduce the enormous loss of newly-hatched chicks, due to improper feeding.

SECOND—How to produce the best broilers, fryers and roasters in the least time and at lowest cost.

THIRD—How to increase the average egg yield per hen, and thus add greatly to the profits of the owner.

In Cyphers Balanced-Ration Poultry Foods we offer poultrymen today the benefit of every fact we have learned—the results of our twenty years of work. With every bag we offer you certain results.

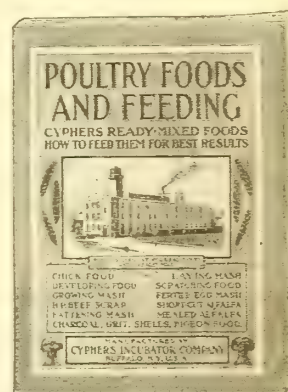

Cyphers Special-Purpose Foods

Chick Food, Developing Food, Growing Mash, Fattening Mash, Laying Mash, Scratching Food, and Fertile-Egg Mash.

Composed of the most wholesome grains, correctly proportioned, properly milled, uniformly mixed—and are cheaper than you could prepare the same mixtures at home. Thousands of poultrymen use these Foods and attest to their superiority over other brands on the market.

Write our nearest office today for current prices, learn about our complete line of Poultry Foods, and be sure to ask for our valuable free book.

MARKETING EGGS BY PARCEL POST.

By L. A. RICHARDSON, Marine, Ill.

THE greater part of the egg output of
this country is produced on the
farms, and the farmer poultrymen are
beginning to realize the great advantage
the parcel post service is offering them
in the way of marketing their eggs. For
in this way, they are enabled to supply
strictly new laid eggs direct to the fami-
lies in the cities.

Prior to the introduction of this ser-
vice, the farmer with new laid eggs, and
the city consumer were widely separated
by the long established route of trade.
His eggs passed first into the hands of
the country merchant, then to the com-
mission man and thence to the city re-
tailer. No distinction was made in price
between eggs that were strictly fresh and
those that were of doubtful age. Hence
the farmer had no inducement to exer-
cise extra care either in the gathering
or the delivery of eggs. They were con-
sequently gathered once or twice a week
until enough had accumulated to fill a
large basket and these were taken to
the country store when it was conven-
ient to go that way.

If a higher price for eggs was expect-
ed, the eggs were held two or three
weeks before being disposed of. This

A new hot-air brooder, the Blue Hen. A
very excellent and successful brooder of the
coal-stove type. The manufacturers, the Wat-
son Manufacturing Company, of Lancaster, Pa.,
claim that it raises a greater percentage of
chicks because of its positive regulation and
the fact that the chicks get plenty of fresh,
warmed air without crowding and smothering
each other.

slow and sloven way of reaching the
city market with country eggs, accounts
for notations in the open market quota-
tions like the following: "Eggs strictly
fresh, very scarce. Stale and shrunken,
in great abundance."

The fact is, the city consumers are not
content with that kind of service and
they are willing to pay a reasonable
premium above the market price for
strictly new laid eggs. They are reach-
ing out to the farms thru the parcel
post service and are getting eggs by the
thousands daily.

Farmer poultrymen awakening to this
enormous demand are fast preparing to
supply it. Everywhere they are improv-
ing their flocks by the introduction of
better bred fowls from well established
laying strains. They are giving laying
hens comfortable quarters and supplying
them with the best foodstuffs.

All over the country, these wide-
awake farmer poultrymen are organizing

egg shipping clubs, one of their number
acting as correspondent and business
manager, whose duty it is to receive the
new laid eggs from other members of
the club and forward them by parcel
post to their list of city families desir-
ing this service.

It is worth noting how rapidly the city
lists of consumers increase in number.
I have in mind a small egg shipping club
that was only recently organized. This
club is located two hundred and fifty
miles from Chicago. For the first two
or three weeks they had but one family
on their "list of customers." When the
club had been in operation two months,
they were sending out over one thou-
sand eggs a week.

Eggs that are laid today reach the
Chicago homes of customers by 8 a. m.
tomorrow. It is not surprising that this
freshness in quality, and promptness in
delivery is turning the tide thru the
short cut, from the farm to the city
table.

The effect that this fast growing new
trade channel will have on the common
market egg is very apparent. The ship-
ping of eggs by parcel post during the
first years of the service, on account
of the heavy loss by breakage, was un-
profitable. None of the early devices
made for shipping cases, afforded the
necessary protection to the eggs from
breakage. It was not until a container
with safe slotted egg pockets came into
use that there was any degree of cer-
tainty that shipments would go thru to
destination without loss from breakage.
Since which time this new and novel
way of supplying city families promptly
with new laid eggs, at about the same
price they had been paying for the com-
mon market eggs, has been rapidly
growing in favor with both the producer
and the consumer.

Madison Square WINNERS

Kulp's wonderful Rose
Comb Brown, 242-egg
strain; S. C. Brown, 240-
egg strain; both big win-
ners at Madison Square.
Large birds, large eggs.
2 greatest strains bred.

Four customers in New York, two in Mon-
tana, one in Idaho, two in B. C., one in Eng-
land and many others have written me that
my Rose Comb Brown Leghorns excel all
others as layers, and lay large eggs. I never
had so many prizes reported as this year.
One man writes: "When it comes to Single
Comb Browns you are in a class by your-
self." I have most Wonderful male color.

MONTHLY PRIZE CONTEST DEPARTMENT

The American Poultry Journal offers the following prizes monthly for the two best articles received on or before the fifteenth day of each month: For the best article, a prize of Three (\$3.00) Dollars will be awarded; for the second best article, a prize of Two (\$2.00) Dollars will be given. Articles intended for the Contest must be written on one side of the paper only and should not contain less than 1,000 nor more than 2,000 words. The articles may be written on any subject pertaining to poultry culture. We reserve the right to retain all articles submitted and to publish such as we deem worthy of space. Send all articles plainly marked to Contest Editor, American Poultry Journal, Lock Box 4, Silver Lake, Mass.

MANAGEMENT AND CARE OF EARLY CHICKS.

Being the First Prize Article in American Poultry Journal's Monthly Contest.

By P. H. GRIGSBY, Glouster, Ohio.

IT IS not too soon to prepare for the season's crop of chicks. Those who have been in the business for any length of time have their own ideas on the subject of rearing chicks, which they follow with varying success.

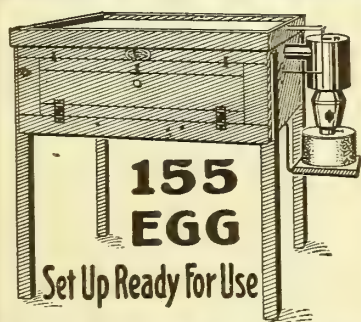

I have noted great changes in this important part of the business during the past twenty-five years, when as a boy on the farm it was my duty to feed and care for the chicks. In those days, like most farmers, we had a large flock of mongrels, all sizes, types and colors. We usually hatched our chicks in April, May or June, when the weather was warm enough for them to run around with the hen and pick up most of their living. For hatching we picked the largest eggs laid by the flock, which are now believed to be from the poorest layers, but almost any hen lays well at that season of the year.

Morning, noon, and night the chicks were fed corn meal moistened with water until they were six to eight weeks old, after which they were expected to shift for themselves—which they did at the expense of the garden, the orchard and nearby grain fields. In the Fall, those that had escaped gapes, chilling or drowning during the sudden Summer showers, hawks and other enemies of chickenhood, were rounded up, the cockerels sent to market and the pullets reserved for layers. However, they did not seem to lay, at least, not until Spring, when eggs were selling at the rate of two dozen for a quarter! In those days I certainly did hate chickens and could see no reason for keeping them. As many have before and since, I placed the blame on the chickens instead of on the lack of care and management which were accorded them. If such conditions prevailed today, the poultry industry, instead of being a billion dollar one, would be as insignificant as it was then. The great growth of the poultry industry is due to the profit to be gained from keeping poultry and this has been brought about by increased knowledge of the care and management of fowls. Credit for this increase of

knowledge should be given to the poultry exhibitions, the work of the experiment stations and last but not over topping all, the poultry journals which have placed all knowledge thus gained in the hands of the public where it does the most good.

The subject of care and rearing of early chicks should interest every poultry keeper. I speak of early chicks because I find the February and March hatched birds to be much superior in size, color and in egg production to those hatched later. I begin preparing for my season's crop of chicks when I mate up my breeding pens in December and January.

In mating the birds I keep two objects in view—utility and Standard requirements. By utility I mean birds that will produce the greater number of eggs, as well as the best bodily development from the food consumed. You will notice in every flock of chicks a few that make phenomenal growth—really growing right away from the rest of the flock. Such birds usually show great vigor and vitality. I mark these birds and if they have no disqualifications and are near enough to Standard requirements, they are later used in my breed-

Leads Them All in Hatches

100% Hatch

"My first hatch was 125 big, strong chicks from 125 eggs. How's that?"

—Wm. A. Burckhart, Bryan, Ohio

140 Chicks from 140 Eggs

"I have had a splendid hatch. 140 chicks from 140 eggs. Great Machines Yet."

—A. J. Bohn, Truesdale, Mo.

No Cripples

"I have had six 93% hatches and not a cripple in the bunch. Best Machines Yet."

—Bert Covert, Lynchburg, Ohio

Three 98% Hatches

"Three 98% hatches and the healthiest chicks that I ever saw. They can't be beat."

—W. M. Allen, Mt. Calm, Texas

Progressive Incubator Company, Box 135 Racine, Wis.

Mother's 500 Chicks for 45 cents a week

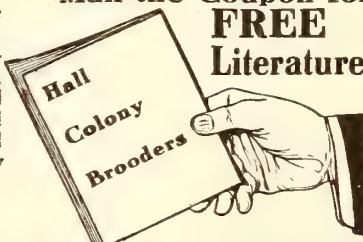

To stay in the poultry business and make a profit requires constant raising of laying and breeding stock. Every poultryman knows that good layers and breeders are range raised. The Hall Cold-Heated Colony Brooder, with cheap portable brooder houses, useful all year, give the advantage of low first cost and low operating expense while brooding up to 500 chicks—the PRACTICAL limit with one brooder—of hardy, healthy chicks.

Successful poultrymen, commercial hatchers, farmers, who are in the poultry business to make money by brooding chicks that command profitable, hardy chick prices use and indorse as the one brooder of absolute accuracy in results, the

HALL COLONY BROODER

that broods up to 500 chicks easier, cheaper than one-tenth the number can be raised under any small flock system. Built for practical service; has 52" round hover, easily raised on pulleys, detachable felt curtains; cast iron stoves, revolving triangular grates cut out ashes or clinkers; fire pot carries 14 hours' fuel—no magazine needed; coaling, shaking, ash removal without raising hover—no chilled chicks, no gas; thermostat absolute in temperature control; regulator parts few, positive—no delicate bearings, counterpoise weights, complicated levers. The Hall is the original coal heated colony brooder—marketed by the Hall Company years before any other.

ing pens. I am an exhibitor, and not an unsuccessful one, of the varieties I breed, and the birds heading some of my pens are usually prize winners at some of our shows. All my chicks are hen hatched and hen reared. In that part of the business I cling to the old method, as I believe it has never been improved upon. The hen hatched chick seems to have a certain vigor and vitality which, in many cases, is lacking in the artificially hatched ones.

I use small brood coops 36x36x30 in. high, with removable top and use one of these for each hen with a brood. As soon as a good likely appearing hen becomes broody, she is placed in a nest in one corner of one of these coops, after dusting both hen and nest with a good lice powder. If she is perfectly satisfied with her surroundings and settles down as tho she meant business, I give her a setting of eggs to cover and keep her well supplied with grit, water and whole corn. Occasionally she is allowed out for exercise and watched to see if she returns reasonably soon to her nest, which she usually does without coaxing. By following this plan, each coop in a separate yard, there is no fighting among the prospective mothers, seldom any eggs broken and no possibility of a hen getting on the wrong nest.

As soon as the chicks are hatched and old enough to leave the nest, I remove the hen and chicks to a brooder house, kept at a proper temperature (this being in February or March), where they remain until the weather is suitable to place them in the small coops on the ground and allowed to go on range, the hen being confined in a small wire enclosure attached to coop. This can usually be done by the first of April.

The first feeding for the chicks consists of a mixture of hard boiled eggs and rolled oats and is given when they are forty-eight hours old. This food is continued for two weeks. After the first few days they are given a small run from which the hen is excluded, the floor of which is covered with from one to three inches of alfalfa meal, the depth depending upon the age of the chicks. Chick food is also sprinkled in this litter and they soon learn to scratch for their living. I know of no better way to develop bone and muscle and to insure a healthy, rapid and vigorous growth.

I always anoint the head and back of the neck of the newly hatched chick with olive oil or pure lard to prevent head lice and see to it that the mother hen is dusted before being removed to the brooder house. Neglect of this usually results in serious loss, as lice infested chickens easily become stunted or die. Even if given belated attention, they never become the same birds they might have been.

As the chicks develop I grade them according to size in separate yards placing a flock of from fifteen to thirty in each yard. At four months, I separate the cockerels and pullets.

In the earlier months of the chicks life I feed for bone. A large frame is desirable and later the flesh can be put on, but it is too late to grow bone when the fowl is nearing maturity. Oats is a good bone maker and I feed plenty of them whole, ground in their mash, and as green food.

I furnish the growing chicks with plenty of oyster shells, grit and fish scrap, as they are all rich in bone forming material. As my yard space is lim-

ited I grow a separate patch of oats for green food. This green food is fed as follows: I use one gallon milk crocks for water in the yards. I first fill the crocks partly full of water and finish filling them up with green freshly cut oats which remains fresh and green until all is eaten. I feed the oats when twelve to fifteen inches high, cutting it off with a sickle and twisting it into pieces two to three inches long which may be readily swallowed by the birds. By this method a small patch of oats will go a long way, as none of it is wasted, and they seem to like the drinking water better with the oats in it.

In conclusion let me say that good care and management are as necessary in poultry raising as in any other line of human endeavor. Mismanagement spells failure every time. With the right care our little flock soon becomes a source of profit and enjoyment. They furnish us with fresh eggs and delicious meat. Millionaires and kings, with all their wealth and power, cannot obtain better. And tho our toil be hard and irksome at times and filled with petty worries, we forget it all when in the evening we look over our little flock, and noting some fine specimen developing in wondrous beauty, dream of the day when the blue ribbon shall adorn his coop in the show room.

VALUE OF TRAP NESTS TO THE POULTRYMAN.

Being the Second Prize Article in the American Poultry Journal's Monthly Contest.

By C. E. TRUMP, Polo, Ill.

IN STARTING my farm a number of years ago I did not think it worth while to install trap nests, as I had read numerous articles stating the great amount of work connected with this line of selection. I followed the advice of many writers and selected my breeders by type and had what might be termed fair success, tho the result was not satisfactory to me.

I soon realized that I had some very good layers and some that did not lay at all, or at least very few eggs. I decided that selection was better than no culling at all, but was interested to know the result if the drones were removed from the flock altogether. Another thing which entered into my decision to install trap nests was that the general tendency of the buying public is to demand an authentic individual egg record and not a flock record.

About this time I installed a complete system of trap nests and trapped a certain number of my earliest pullets each season, which would be likely to give me the best layers from hens that had the tendency for Winter egg production, the eggs being gathered in January and hatched in February. I was greatly surprised at the extremely good records some of my pullets were making and likewise surprised at the lack of eggs from some of the best looking specimens in the flock. This convinced me that selection by appearance is apt to be deceptive. I trapped these pullets from July when the first eggs showed up, and the whole flock until along in January. I then mated up this pen, taking out all the pullets that had not made a good record during the Fall and early Winter months. Some of the pullets which were removed from the pen, had

Every HALL Hatch is a Hatch of Profit —

Farmers and poultrymen use an Incubator of 1200 eggs or more capacity to make money. Day old chicks and custom hatching offer a big, profitable, commercial opportunity in every locality. It exists right around YOU. A Hall 1200 will let you start small and grow RIGHT; make your own installations—no tearing out cellar sides or doors; then every hatch means money.

Successful poultrymen and commercial hatchers who always have reliable hatches of healthy, hardy chicks commanding profitable prices, use and endorse as the one machine of constant reliability of profitable production and performance, the

not laid over an average of five eggs for a month and about 20 per cent had laid eight and twelve eggs. For the breeding pen I selected only such pullets as had laid better than twenty eggs a month on an average, and mated them with a selected male bird, in the meantime keeping right on with the trapping to round out the year's work.

My intention is to follow out this plan year after year, until I have the Winter egg laying habit a part of the strain. With careful breeding practiced, proper food and housing given the birds, I believe a great deal can be done to increase egg production, tho it will take time.

The natural tendency of a hen, bred to lay or not, is to lay in the Spring months. From such flocks that have made low averages thru the Winter months, are selected eggs for hatching and at least 60 per cent of the eggs are from hens that have not laid at all dur-

ing the Winter. Following that plan year after year is a good way to lose the Winter egg laying habit altogether.

By using the trap nest this can all be avoided. Thru using the trap nest I have found that the hen which laid well thruout the Winter months will not lay as many eggs in the Spring as the hen that has loafed all Winter, and the average flock has a great many of these Winter loafers. For this reason the chicks are mostly hatched from eggs laid by birds which lay only in the Spring.

The utility bird has stood for a lot of abuse and regarded by many as a "cull," unfit to be on exhibition in the show room, but the word utility should mean a great deal more to poultry keepers than fancy, for after all is said and done, the poultry business rests upon utility quality. There is no getting away from that. It means the best in reproducing power and in food product

and that is what the poultry business is. Utility and culls have been associated so long by writers and cranks that they are one and the same to many engaged in the fancy end of the business. But those so thinking are on the wrong road—a road which will lead them out of the business.

To make the most of utility points should be the aim of every breeder of utility fowls. The pens should be mated as carefully as show pens, for the future of real utility in poultry is indeed great. The prices paid for worthwhile utility birds today are as great as for show winners.

I consider strict utility breeding as much a separate line as specialty or exhibition breeding as the results of careful selection and trap nesting of utility fowls has built up some of the best paying flocks on record. In this line of work, the trap nest is essential for de-

Wisconsin Wins in big Hatching Contests Every Year

Year after year these unbeatable Wisconsin Incubators have proved their superiority over all other machines regardless of price. Prize-winning hatches like those shown here prove beyond a doubt that Wisconsin Incubators are the best for the money in the

world. They prove you can't get bigger, better hatches even if you pay twice the price. So why pay more?

In addition to their wonderful hatching dependability, I want to prove to you that Wisconsin Incubators are also the best built, most durable and best equipped machines in the world for the money.

BOTH 130 \$10

EGG Incubator and 130-Chick Brooder Machines for only

PRIZE-WINNING HATCHES

3rd Year

Mrs. J. W. Mize, Vaughan Mills, Ky., won in the Successful Farming Contest, hatching 208 chicks from 208 eggs in two settings.

2nd Year

Mr. C. B. Arter, Ohio, won in the Successful Farming Contest, getting 181 chicks from 181 eggs in two hatches.

1st Year

Mrs. J. Mc Mahan, Veederburg, Ind., won in Missouri Valley Farm Hatchery Contest, hatching 125 chicks from 125 eggs.

4th Year

Mr. F. H. Lewis, Montrose, Pa., won in Successful Farming Contest, getting 96 chicks from 96 eggs one setting.

5th Year

Mr. C. C. Rich, Russiaville, Ind., won in Successful Farming Contest, getting 94 chicks from 94 eggs—the first hatch he ever made with any incubator.

All Won With This WISCONSIN \$10 Outfit

Find out what an Incubator is made of before you buy. If you will write for my free catalog, I will gladly mail you a sample of the lumber we use so you can see the quality and compare it with others. Then you will know which machine is best; which will last longest and which will give you most value for the money.

Why Take Chances? Wisconsin Incubators have double walls.

I build the outer walls of my Incubators of genuine California Redwood—costing four times as much as materials some manufacturers use—and the inner wall is of insulating board with dead air space between the walls—hot water heat, double glass doors, copper tank and boiler, self-regulating. Roomy nursery under egg tray. Incubator is finished in its natural color showing the high grade California Redwood lumber used—not painted to cover up inferior material. Both machines shipped complete with thermometers, lamps, egg tester and book of directions, all set up ready for use when you get them. Freight paid East of the Rockies.

I Give 30 Days' Free Trial—10 Years' Guarantee (6)

Order Direct from this Advertisement—Money Back if Not Satisfied

You can send in your order direct if you wish and save time. Remember you can have 30 days trial with the understanding that if you are not perfectly satisfied, simply write me—send the goods back and I'll not only return your money, but pay the freight charges and charge you nothing. I have been advertising in this paper for years. The publishers know me and know I do just as I agree. I am undoubtedly making the readers of this paper the most remarkable offer on high grade incubators and brooders that has ever appeared in this paper. You take no risk in ordering a Wisconsin direct from this advertisement. Don't buy any other until you get my free catalog. Write for it today.

Thos. J. Collier, Mgr. WISCONSIN INCUBATOR CO., Box 52 Racine, Wis.

termining the results of selection and mating.

A point which should not be overlooked in the trap nesting of fowls is that the close association the attendant has with the birds in handling them keeps his interest to the top notch and he is always quickly aware if there is anything lacking in the state of their health or conditions surrounding them. Too many breeders see their birds only occasionally. By handling the birds daily, there is no possibility of disease, over-fatness or an under-fed condition getting the better of the flock. The man who has the business at heart is right on the job every day, and he knows his birds.

It is claimed by many that Leghorns are wild and flighty. I have found that they are very easily handled and learn to like it, becoming as quiet and gentle as any breed.

The trap nest record, in advertising is too often abused. Egg records have been put up so high by some that the only one who will really believe such statements is the novice who has not yet kept fowls. When we stop to consider that the record to date is 314 eggs and then see advertisements stating that flocks average 300 eggs each, it makes us wonder how long people are going to be fooled by such statements.

The trap nest is the only sure way that the egg record of flocks can be determined and the advancement of the flock in producing power can be brought about. It means work, of course. But who objects to work if the results are satisfactory? No one thing goes to make the poultry business a success, but the many things that combine to make a thriving flock, must be backed by common sense and a love of the work. Nothing without labor is a fact in every line of work, but none more so than poultry keeping. In starting with poultry this fact should be well borne in mind. The beginner will find it of the greatest help to success to trap nest his flock, for he will then know what his birds are doing and be able to spot the loafers, for there are loafers in all flocks, no matter how good the general average of the flock is. The assurance which this work gives the poultry keeper is well worth the extra labor which it entails.

What qualities do you possess which would bear recommendation for ability or credit? Abraham Lincoln was once called upon to recommend a neighbor who wished to open an account with a business firm. Not wishing to refuse, and knowing his man, this is what he wrote:

"I am well acquainted with Mr. — and know his circumstances. First of all, he has a wife and a baby; together they ought to be worth \$50,000 to any man. Secondly, he has an office in which there is a table worth \$1.50, and three chairs worth, say, \$1 each. Last of all there is in one corner, a large rat hole, which will bear looking into. Respectfully,
A. LINCOLN.

BROODER

For \$2.96, including heater, you can build the simplest, most efficient, and most satisfactory brooder ever made. Wind-proof; fire-proof; rat-proof; fool-proof. Can be built in an hour by anyone with no tools but saw and hammer. Illustrated plans, 25c.

Womans Success With Poultry

Helen T. Woods, Editor

A Department for the Exchange of Helpful Poultry Experiences

WORK, PATIENCE AND A WOMAN'S HELP.

"Hard Work, Early and Late," is One Breeder's Motto, But is Not that the Story of Every Success the World Has Ever Known?

By MRS. A. J. SCHLOEB, Omro, Wis.

VERY excellent advice has been given from time to time for the benefit of those engaged in poultry culture, and it is worthy of notice that experienced poultry raisers do not vary greatly in their opinions as to the essentials for successful poultry farming. Some writers put more emphasis on patience, while another states that in order to make a success with poultry, one must be able to successfully handle any business, but everyone agrees that the poultry keeper to be successful must be willing to work hard, early and late.

I remember reading on a card, placed on a coop of one of the well-known breeders at the Coliseum Show, Chicago, several years ago, something like this: "Hard work, early and late." And it made a lasting impression on me. It gives me inspiration and new strength many times, to remember that card, for I know to a certainty that others have to work as well as myself to get worthwhile results.

Patience! I should say so! Do you ever try to manage a perverse setting

hen? There is nothing more wilful or provoking than a cantankerous old hen who has mapped out her own plan of bringing a family of chicks into the world. She simply refuses to listen to reason, to be coaxed, bamboozled or forced into accepting any other than her

sary for hatching them has passed, but how, friends, shall we know if she be normal? Most of us have met up with a great many broodies that proved themselves, by this rule, to be anything but normal. In counting the costs of raising chicks by the natural method, a great

New brooder house on the Barred Plymouth Rock farm of J. W. Parks, Box J, Altoona, Pa.

own ideas on the subject. She knows the place she wants to sit, she knows when she wants food and recreation, she knows how long she intends remaining broody. The normal hen is said to stay by her eggs until the period neces-

sary amount of time and patience should be taken account of tho a great many tell us it only requires "a few minutes" a day. I think every poultry keeper should have some real method of attending to broodies, for when they do settle down

in good motherly fashion, and attend strictly to business, their services are invaluable. It is advisable always to start a number at one time, and after the first test of eggs to sift the lot down to the "tried and found worthy" ones, who do not soil the nest, break the eggs or leave in a tantrum, and forget to return until the eggs become chilled.

One need not think that trials are greatly lessened by artificial incubation and brooding. There are weeks during the hatching period of turning eggs twice daily, cooling and regulating when one has to keep patience well in hand. The fear of forgetting the eggs while airing them, was such a source of dismay to me that I took to knitting during the waiting periods of attending to the incubators. As the occupation of knitting has always been particularly distasteful to me, I am always glad to lay it aside on time, and return the eggs to the incubator. Result: I have not, since adopting this method, failed to

A Tom Barron Single Comb White Leghorn male as bred by M. H. Waugh, 511 Loucks Ave., Peoria, Ill.

get the eggs back in the machine on time—and my husband gets warm home knit socks for Winter.

When it comes to the care of the baby incubator chicks—beautiful, stupid little mites that they are—it is by sheer patience that they must be taught to care for themselves. To go into the heated chamber when cold, to go out when in search of food, exercise or outdoor air—these are the first lessons to be impressed upon the baby chick's brain cell. And in this respect they are much like humans. Some "catch on" quickly, while others never really know whether they want in or out. The chief thing is to get a few good "leaders," wideawake, happy, hungry chicks, and the flock will usually follow these. At least they have sufficient intelligence to recognize ability in their kind, and that is saying more for them than can be said of some humans.

Yes, the poultry business is a bad place for the individual lacking the virtue of patience. After the chicks are well on their way and individual attention is no longer necessary to their wellbeing, there comes a long wait for their development while the grain bills fail not to appear at stated intervals. Only an optimist thru these months keeps heart and courage well displayed.

But the end in view should be worth the effort.

The more I study the *successful* poultryman, the more convinced I become that he is aided and encouraged by "a silent partner," which may be sister, mother or wife. A woman can aid in so many ways in work of this nature that her able and interested assistance is next to a necessity on any successful plant.

To some women, work or interest in poultry is "a bore," but I have usually found that in such cases, the husband gets out of the business in the course of time—and not a great while either.

An interested woman can help wonderfully in the selection of correct specimens for breeding pens, for sales, for exhibition, as color and harmony should be right in her special line. In many instances she has the care of the correspondence, the packing of eggs for hatching, the sale of the commercial eggs, charge of the advertising, trap nesting records and many other matters in the conduct of the business which requires patience and careful work. Just how a man is to get this help from the fair sex of his family is a problem

S. C. White Leghorn cockerel, headed 6th pen at Panama-Pacific Exposition and first pen at Zanesville, Ohio, 1915. Owned by J. W. Friesner & Son, Bremen, Ohio.

which each man must work out for himself. But certain it is, no man must expect good work for any length of time, unless he pays for it. A woman told me not long ago that she intended working more with the poultry this year, as her husband "had raised her pay." Said she: "The better he pays, the more and better I work."

Some men are like the old man who told a friend of his that his wife was always asking for more money, that she wanted a dollar yesterday, and seventy-five cents today, and so on, all the time.

"What does your wife do with all the money?" asked the friend.

"Wall, I dunno. I ain't gin her any yit."

He is a wise man who remunerates in cash and appreciation the members of his household who aid materially in advancing the worth and scope of his business, whether it be by actual labor, useful suggestion, or inspiration.

There is no getting away from it. The women members of the household are important factors to be considered in the conduct of a successful poultry business.

We made a great win. We didn't leave many prizes for the other Anconas to take home, because we were so much better looking, although there were many prize winners from the Panama-Pacific Exposition and other leading shows of the country. Just think! I won first prize for being the very best cockerel in my class. My brothers won second, fourth and fifth prizes. My sisters did fine. They won first, second, fourth and fifth prizes in the pullet class. My mother won first prize for being the best hen, and her sisters won second, fourth and fifth prizes. We were all proud of my father, because he was such a handsome bird. He easily won first prize and his brothers in the first and second prize pen did show up nicely. Every person admired them. Our cousins in the first prize Single Comb pen were the talk of the show. They were so much better than the birds in the long row of pens, that they had no trouble in getting first prize. Their brothers won first and third cockerel and second and third cock. Their sisters won first, third, fourth and fifth pullet; also second, third and fourth in hen class. We won the two gold special prizes for best display on Single Comb and Rose Comb Anconas. We couldn't stop laying during the show. The people would stand around in front of our coops and gathered the eggs as fast as we laid them. It was a great treat for the city folks in New York City to get so many nice large eggs of such excellent flavor. This makes nine consecutive years that we have averaged such a splendid win.

This wonderful win shows the peerless quality of Sheppard's Famous Anconas and again proves that they are the world's best. If you want to win at your show, book your order now for eggs, baby chicks or select stock. Write for 86-page catalog free.

Our 44 YEAR 1872-1916 Record Backs up this Offer

We **GUARANTEE** to build up Your Breeding Stock, to give Strength and Vitality, and to Secure Egg Fertility, so you will hatch strong Livable chicks — or **YOUR MONEY BACK**

This successful Breeder has used **Pratts Poultry Regulator** over 20 years.

Olean, N. Y., Feb. 26, 1914

We have used **Pratts Poultry Regulator** for over Twenty Years. The first we ever used was given us by a man who saw our chickens in a very bad condition. One after another would die until we had only a few left, but in a day or so **Pratts Poultry Regulator** started to get in its good work. Since then we have never been without it nor are we bothered with sick chickens if it is fed with the first feeding. Our troubles soon ended when **Pratts Regulator** came to our rescue.

E. B. DAVIS

Makes Hens lay even in February

Petros, Tenn., Feb. 27, 1914

Only two out of 11 Leghorn Hens were laying, when I bought **Pratts Poultry Regulator**. I have been using it one week and now all 11 of the hens are laying. I would not give **Pratts** for all other poultry remedies.

W. A. BUNCH

Pratts has never failed to make his hens lay.

Utica, N. Y., Jan. 19, 1915

I have never had a hen or pullet that would not lay in cold weather after feeding **Pratts Poultry Regulator** and always get eggs when they are the highest. I have sold eggs at 85c a dozen, thanks to **Pratts Poultry Regulator**. I have recommended it to a number of my friends and they are using it with great success. I would not be without it.

H. B. MORGAN

Lots of Eggs from a small Flock

Phila., March 15, 1915

Pratts Poultry Regulator keeps the chickens healthy and in laying condition. I am receiving 9, 10, 12 and 15 eggs every day. I used to receive only 2 or 3 a day.

GEORGE FREEMAN

FEBRUARY

The Poultryman's most important month.

You can largely determine the success of your season's operations NOW.

You must have the right kind of eggs for hatching—eggs which are strongly fertilized and will hatch vigorous, livable chicks. Such eggs are produced only by breeding stock possessing abounding health, strength and stamina.

Pratts Poultry Regulator

will surely and quickly put your flock into this condition. We guarantee it.

This time-tested tonic for poultry tones up the system, sharpens the appetite, aids the digestion, purifies the blood, prevents disease. It puts the breeding fowls in condition to produce the best eggs for hatching—makes the chicks grow rapidly—enables them to avoid the common ills of chick life—eliminates loss and swells profit. **Pratts Poultry Regulator** is not at all expensive—

Costs only a Cent per Hen per Month

It is a natural egg producer. Prevents the usual February drop and keeps the hens laying steadily

Test **Pratts Poultry Regulator** Now

Our liberal guarantee protects you fully. If you are not satisfied with results, merely ask for your money back.

Pratts Poultry Regulator is the original. Its use is world wide. Leading poultrymen find it just what their flocks need the year round. Read the letters in the left-hand column. We have thousands of others—unsolicited.

Most dealers carry **Pratts Poultry Preparations**. If your dealer cannot supply you, write to us direct.

"The Poultryman's Complete Handbook" contains 160 pages of practical information and illustrations. It will be a great help to you. Send ten cents for copy post paid.

PRATT FOOD COMPANY

PHILADELPHIA

CHICAGO

TORONTO

Pratts Baby Chick Food

Guaranteed to raise every livable chick. A complete food for the first three weeks and longer. The most wonderful discovery in Baby Chick Feeding. Exclusively adopted on leading farms where it is bought by the ton for their thousands of chicks. The chicks it saves pays many times over its small cost of a cent a chick for three weeks. 100 lbs. \$5.75, 25 lbs. \$1.50, 14 lbs. \$1.00. Large 50c and 25c packages.

"I cannot say too much in favor of **Pratts Baby Chick Food** for baby chicks. For starting them, it certainly produces wonderful results and no need of losing any chicks."—Mr. LESTER TOMPKINS, famous breeder of Rhode Island Reds.

Pratts Powdered Lice Killer

A non-poisonous, non-irritating powder which is sure death to lice, mites and vermin. Especially valuable during the hatching season, protects the sitting hen and her chicks. In 50c and 25c sifter top cans.

Pratts Poultry Disinfectant

A liquid Lice Killer, powerful germicide, antiseptic and deodorant. Will destroy roup and other disease germs. Also especially valuable for treatment of colds, canker and other serious poultry diseases.

Diluted ready for use, it costs only about a cent a gallon. No other preparation of equal strength at anything like the price. One gallon \$1.00, one quart 35c.

Pratts Roup Remedy

Roup can be cured and here is the remedy to do it. Also for colds, diphtheria, and all similar diseases. Put up in tablet or powder form. Tablets make individual treatment easy and certain. \$1.00, 50c and 25c per box.

Questions and Answers

Conducted by
Prince F. Woods, M. D.

To Our Correspondents.

A good many of you have been disappointed since November last because we have been unable to grant your request and make a personal reply by mail. Our correspondence has been so uncommonly heavy, the queries and repeats have been so many, that, with the considerable work of getting out our big winter issues, it has been absolutely impossible for us to find time to answer query letters by mail, except in a few unusual cases where the matter seemed particularly urgent. In our long experience we have never before had such a great volume of query letters at this season.

We have tried to sort these letters and answer as many as possible of the more important queries in this department, but there were a good many that we did not—could not—cover. There is much to be done in the preparation of reading matter for AMERICAN POULTRY JOURNAL, and a very great deal of the work has to be done by one man and cannot be turned over to an assistant, — the goodness knows the assistants are busy too—so we must ask your patience and indulgence. You will find in all departments of the AMERICAN POULTRY JOURNAL, and in the articles and editorials, that special attention is given to explaining and

demonstrating many interesting features of poultry work. If you do not find an answer to your query in this department, read over your Journals carefully and you will undoubtedly find your query covered somewhere. Meanwhile, consider that we are doing our best to interest, instruct, help and please you. We are endeavoring to "deliver the goods" and we are not sparing time, labor, or expense.

Breed Articles.

Q. (1) I have read with much interest the articles "Why I Breed Black Minorcas." Why, if the S. C. Black Minorcas are as good as the writers claim, do not large egg farms use them in preference to S. C. White Leghorns?

A. (1) When we began publishing the breed contest articles we expected to get questions just like yours. The query is a perfectly natural one. When a breeder writes about his favorite variety he is certain to enthuse over it. It is natural and honest enthusiasm, and, we believe that, in essentials, what has been said of the Black Minorcas is true,—tho much the same thing can be said with truth of other breeds. So far as our knowledge of them goes, the Black Minorcas have been boosted mainly in the fancy and no very great effort has

been made to establish them as an egg farm fowl. White Leghorns have been consistently bred for and boosted as egg machines ever since we can remember. That is one answer to your query, but it isn't all.

Minorcas are hardy and prolific layers of fine large white eggs when properly bred and managed. At times they have been bred a little too beefy in comb, but there are plenty of good Black Minorcas that are just as beautiful and just as useful as any other variety, and just as fine table poultry. For some reason, and it is largely prejudice and not based on sound reasoning, a good many people are not favorably inclined toward black feathered, black legged chickens; altho the same people will enthuse over, and pay high prices for turkey. We don't know why, but it is so. We like Minorcas and had good results with them when we bred them. Some strains are more hardy than others, but that is true of most breeds. We have noticed that unless well cared for and well managed, Minorcas are apt to lay themselves out of condition. That is the fault of the poultry keeper and not of the breed. Some folks claim that they are a bit delicate and will not stand bleak seashore locations. We do not believe that, for we have seen fine hardy Minorcas

MEYERSDALE, PA.

grown right on the Maine coast. The hardiness is a matter of breeding, care and management. One who likes a big bodied, clean legged black fowl should find Black Minorcas very satisfactory.

Q. (2) I have 125 S. C. White Leghorns in an open-front house, built on Corning plan, size 16x30 ft. Sixty-four of these pullets were hatched April 23 and sixty-one were hatched May 17. I incubated 408 eggs to get this lot of pullets. In September, they laid 37 eggs; in October, 526 eggs; in November, 1,431 eggs, and to December 15, 812 eggs. This is my first year with poultry and I do not know whether this record is good or bad, but they tell me that I am the only man for miles around here that is getting anything like the right egg yield for the size of the flock. Is this so?

A. (2) You are getting a good egg yield.

Q. (3) Could I do as well with Black Minorcas?

A. (3) You probably could.

Q. (4) Would you advise me to change to Black Minorcas? My only reason for changing is that some people complain of the smallness of the Leghorn eggs and the light color of yolks. Can these defects in the Leghorns be remedied?

Akron, Ohio.

O. S.

A. (4) If you have no other reasons for wanting to make a change, we certainly would not advise you to make one. You have a good start with Leghorns, by careful selection and breeding you can get larger eggs. We have no difficulty in getting eggs that run from 2 ounces to 2½ ounces each from our Leghorns. The color of the yolks is largely a matter of feeding. We get nice rich colored yolks from our birds and we feed a good deal of yellow corn, alfalfa, greens, and fish scraps. Cut clover is a splendid food to help put a good orange yellow into the yolks. With our Leghorns we select good sized eggs for hatching and we find that some of our best layers are fairly large sized

"Less Labor and Expense"

with our Blue Hen Colony Brooder and results are very satisfactory. Cost of operation only a trifle. In three hatchings of thoroughbred White Leghorns cared for by our faithful Blue Hen, lost only 2% of chicks—almost a perfect record.—Porter & Zimmerman, Patoka, Ill.

Burns hard or soft coal or gas. Large grate 2½ times usual size. Means big fire surface and thin layer of ashes. Steady, even, economical fire. Automatic regulator.

Blue Hen

30 DAYS FREE TRIAL

Hill Colony Brooder, \$30 Magic Col'y Brooder, \$15

We, the undersigned, wish to inform every poultry raiser in America that the Hill Colony and Magic Brooders are absolutely reliable. They have no equal. They are not made like other brooders. They possess many improvements not found in other makes. If a brooder leaks

gas and will not hold the fire, of what use is it to you? Be careful when selecting a brooder, as you are deciding your own fate.

The vital parts of a brooder are the grate, the fire box, the coal magazine, the gas proof chamber, the check dampers, the capacity, etc. We will cheerfully refund the money after thirty days trial if our brooders do not do all we claim.

If you wish to succeed you must have brooders which will do the work. Write today for circulars describing same. We will also mail you our brooder booklet, free.

Poultry health insured

Use Carbo Units to support your poultry yard fence. They are mite-proof steel—do not harbor nor breed vermin, dirt, filth or disease. No wood to rot or gather dampness.

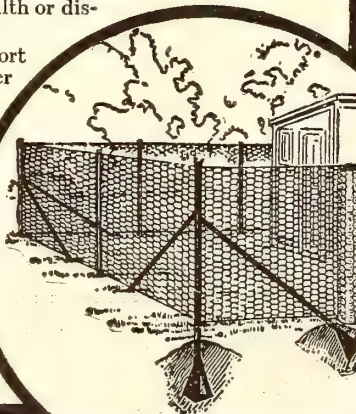

With heavier style Carbo Units you can support farm sheds, chicken houses, garage, or other buildings.

Three Carbo Units make a fence corner that will outlast the fencing wire. No concrete used, as Carbo Units are set in earth only, sub-soil anchored and earth cushioned. Never buckle at the ground line or shear off. Carbo Units are less expensive than wood posts, concrete, or semi-steel posts—occupy 1-10th the space of wood posts. Are easy to set; merely bore a hole and set in unit; tamp earth, and Unit is there to stay. Life is five to ten times that of wood.

For supporting fencing between terminals, use Carbo Spring Supports. Write for Catalog 16, which tells about Carbo Units, and their 101 uses about the farm.

STOP THAT ROUP!

Roup starts as a simple cold in the head. The indications are watery eyes or nostrils, dirty beak, wheezing or coughing at night. Later the discharge becomes a thick mucus. A chicken cannot blow its nose. The nasal passages fill up. The face puffs out, the eyes swell shut, then death ensues. This disease is generally accompanied by "canker," a yellow or gray coating in mouth, throat or on tongue, which is similar to croup or diphtheria and is very contagious and fatal. The original cause is a damp or drafty poultry house, or extreme changes in temperature between night and day. A little Germozone in the drinking water generally prevents or checks these disorders right at the start and is especially valuable in preventing contagion. Sometimes individual treatment is necessary, but, with Germozone, the work is easily and quickly done and no long, tedious "doctoring" necessary.

Liquid form, 12 oz., 50c; 32 oz., \$1.00. Tablet form, one size only, 50c, postpaid. Catalog, poultry book and sample free.

hens producing good sized eggs. After the first few pullet eggs we rarely get small eggs.

The Best Breed.

Q. I am a beginner and want to make a start with poultry. The more I read about breeds the more confused I get. I want to start with the best breed, but it seems to me that every breeder claims that his breed is the best. I want a nice breed of chickens to grow on a farm, some that will look well, lay well and eat well on the table. What breed do you recommend for me? Fair Hill, Md.

A. We honestly do not know what is the best breed, we have bred nearly all of the popular varieties and have found them all good. Individual tastes differ and what suits us might not suit you. There is a chance for very wide differences of opinion on all questions of beauty. In practical values for eggs and meat, almost any of the large and medium sized breeds can be bred and managed to yield fine results. If eggs alone are wanted, and size of the fowl is no particular object, the choice narrows down to a few breeds. But we do not want the responsibility of selecting a breed to please some one else. Look around you, visit the shows, visit a number of poultry breeders,—you are certain to see something that appeals to your fancy. When you see a breed or variety that you want to breed and grow, then go to it. You can mould that breed into a strain that will suit you all thru and you will have a lot of enjoyment while you are about it. There is no such thing as a one best breed.

Crooked Breast Bone.

Q. I have a cockerel that is large and has good color and shape, but I never herd him crow or saw him pay any attention to the hens, he just stands back while they eat. He has a crooked breast bone. He is large and looks as if he would be fully up to weight when he gets grown. Would he be fit to breed from? I wanted to use him next month. Piggott, Ark.

A. We would not consider breeding the cockerel until he is fully grown and matured. If the crook in the breast bone is only slight and known to be the result of mechanical injury and not due to faulty development, or lack of vigor during growth, you might use him when fully matured. Usually crooked breast bone is a sign of impaired constitutional vigor at some period of growth and we consider such specimens deformed and are opposed to breeding them. There are enough poor chickens grown without breeding one that is known to possess a serious defect.

Avoid Chick Losses

Eye Troubles.

Q. (1) I have a flock of pullets and hens, nearly all Anconas, but some Rhode Island Reds. They are housed in an open-front well-ventilated house, which is cleaned regularly and litter changed about once a week. They have an ailment I cannot understand. It does not seem to be a cold or anything like it. At corner of one eye it seems to start with a little soreness, and it just keeps getting larger until the eye is closed. No swelling, no odor of any kind. They eat but very little. They get droopy for several days before the eye trouble shows. Some of my best birds have this trouble. I have dipped their heads in a disinfectant solution and used vaseline, but it does not seem to do any good. When the eye is closed, sometimes a scab forms. There is no discharge from eyes or nostrils.

Dudley, Iowa. T. J.

A. Be careful to avoid musty or mouldy litter. Do not use litter too deep or allow it to become damp. Clean up the poultry house and use some crude petroleum oil to lay the dust. Put it on with a sprinkler and rake it in. For the affected birds obtain from your druggist some 25% argyrol solution. Cleanse the eyes with warm water and then drop in each eye a few drops of the solution. Repeat daily, or twice daily, until there is improvement and then use less often. Feed the birds an appetizing moist mash once daily until they get into better condition. The 25% argyrol solution should be freshly prepared.

Feeding Boiled Oats.

Q. A poultryman tells me that my feeding boiled oats to my chickens will lead to disaster. I supposed that by boiling them I was making them more fit to use in a wet mash for my chickens. Am I right or wrong?

A. Boiled oats won't hurt your chickens if you feed a good variety of other food. When oats are light in weight and not well filled, about the only fit way to feed them is boiled or well soaked and scalded. As long as you do not overdo the feeding of cooked food, you are safe enough.

Several Questions About Roup.

Q. (1) I have a cockerel that got out of his pen last spring, just after the breeding season and ran with a large flock of hens. At times for a while his comb would turn dark in color, but otherwise he seems all right. He has run on range all summer and seems real healthy this winter. His chicks have done very well. Would you advise using him another year?

A. (1) Probably the trouble was only due to worms. If he is healthy and vigorous and what you want to breed from, see no objection to breeding him.

Q. (2) Would the cockerel be all right to put with yearling hens?

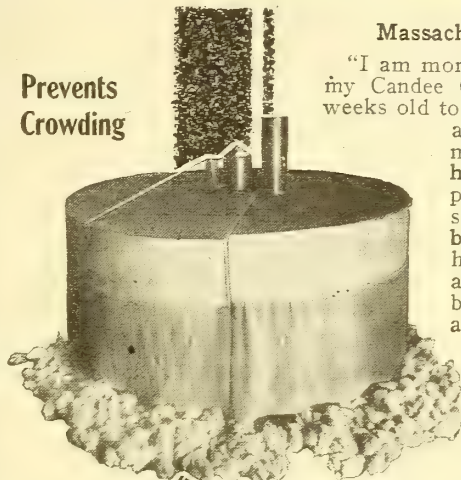

A. (2) He is a yearling, not a cockerel, but he should be all right with yearling or two-year-old hens.

Q. (3) I had a few cases of roup and quite a number of colds in my flock. Killed all the worst ones and marketed the rest. Those with colds only showed a bit of white froth in corners of eyes. Will they be likely to have roup later? They did not run any at nose, eyes or mouth.

A. (3) If you marketed them, we cannot see how it matters. Slight colds do not necessarily result in roup, if the birds are well housed and well cared for.

Massachusetts—"Did Better Than Hen"

"I am more than pleased with the results from my Candee Colony Brooder. The chicks are six weeks old today and some of them weigh 1 1/4 lbs. and the lot will average 1 lb. each. I made a test in a small way. I put 18 hen-hatched chicks with hen and placed outside the brooder house. The same day I put 200 chicks with the brooder. At the end of one week the hen had 11 chicks and the Candee 196, all of which are alive today. The 4 the brooder lost picked each other's eyes and went blind and could not see to eat."

Harry Watson,
May 27, 1915. Montague City, Mass.

New York—600 Chicks, No Loss

"We have 600 chicks under one Candee Colony Brooder and have not as yet lost a chick. They are about 2 weeks old. Never saw chicks grow as they are growing."

J. H. Matthews & Son,
April 20, 1915.

So. New Berlin, N. Y.

Ohio—Wouldn't Sell Two for \$500

"In November we installed two of your Colony Brooders, and five hundred dollars could not buy them if we could not get two more like them. We have had zero weather and also very warm weather, and the Candee can't be beat."

J. D. Wilsey,
March 17, 1915. Grove City, Ohio.

Iowa—Lost Six in Six Weeks

"I put 251 chicks with my Colony Brooder, 3 ages one week apart, and only lost 6 in six weeks. If it had not been for the steady, even heat from the Candee, I would have had quite a loss, as we had some snappy weather in March."

R. Brookman,
April 2, 1915. Creston, Iowa.

Washington—3,200 Chicks in Four Candees

"We are well pleased with the four Candee Brooders. We now have 3,200 chicks under them, 750 to each brooder, and at three weeks have lost less than 7 per cent. So that speaks well for your brooder."

Anthony Bros.,
April 27, 1915. Seattle, Wash.

Candee has larger fire pot, 12-inch grate, coal magazine feed, automatic regulator, all-wool curtain and big roomy hover. No crowding loss.

OWEN FARMS

**Buff and White Orpingtons
White Plymouth Rocks
S. C. Rhode Island Reds
White Wyandottes and
S. C. White Leghorns**

Have proved they have no superiors. They have made good in the show room, the breeding pen, the laying pen. They have demonstrated that they live, grow, lay and pay.

1916 Matings

Are better and stronger than ever before. Never before in the history of the Farms have the minor details been so perfect in every male and female as they are today. My new Mating List will give you a careful word picture of every male used in my best pens and a general description of all females. Every mating in White Plymouth Rocks, White Wyandottes and White Leghorns has been put together by the master hand of Frank H. Davey. Every mating in Buff Orpingtons, White Orpingtons and S. C. Rhode Island Reds has been made by Maurice F. Delano. Our combined experience in successfully breeding strong, healthy, winning birds amounts to nearly SIXTY YEARS. This experience means much to us and should mean something to you.

First Prize Ckl., New York, 1914

1916 Mating List

Tells the story and will be ably seconded by my grand new Catalog, which will be out early in February. You cannot afford to purchase eggs in my varieties without sending for these books and carefully considering Owen Farms quality. My customers have won highest honors all over the country with chicks raised from my eggs, and 1916 quality is better than ever. Owen Farms guarantee is original, and different, and really means something.

Eggs from the Best Matings in America

\$10.00 for 15. \$30.00 for 50. \$50.00 for 100

Eggs from Grand Good Matings

\$5.00 for 15. \$15.00 for 50. \$25.00 for 100

No reserved matings. If you must have eggs from special pens they are yours at prices stated in Mating List.

1915-16 Winnings:

Q. (4) Will chickens hatched from eggs laid by those hens that had colds or slight roup, be more likely to have colds than those hatched from eggs of birds that never were sick?

A. (4) We believe that they will.

Q. (5) What causes some hens to go light and turn pale or yellow about face and comb? They usually die in a few days.

A. (5) It is usually the result of some infectious disease and indicates that the houses and earth of runs and floors are in need of thoro renovation and disinfection.

Q. (6) Have been using a roup cure in the water and have removed all very sick birds. Most of the birds are well and no new cases have developed. What else would you advise doing?

New Phila., Ill.

R. U.

A. (6) Clean up and disinfect the quarters. Continue treatment until you are sure the trouble is over. Get plenty of fresh air into the buildings. Feed liberally on a variety of wholesome food. You seem to have the best of it and to be on the road to getting rid of the trouble. Would burn all litter and nesting material and make the cleaning and disinfecting a good thoro job.

Feeding Questions.

Q. (1) I am an amateur and want a little information. I have purchased about two tons of wheat at \$1.00 per hundred pounds, and also oats at same price. Corn is very hard to get. In fact, for past two months have been unable to buy any. When it is available it sells at \$2.25 per hundred. Owing to the difficulty in obtaining corn and the high price demanded, I have been feeding only whole wheat in litter morning and night. In the dry mash I have: 100 ground barley, 100 ground oats, 150 ground wheat, 50 beef scraps, 25 gluten meal, 15 oil meal, 10 charcoal, 25 alfalfa meal and 3 salt. I also feed about 2½ pounds for every ten birds of soured skim milk, from which the whey has been strained. They have all the green stuff they will eat. Have been getting a 30% egg yield, with half the hens in moult. Would it be profitable to buy corn for feeding at \$2.25 per hundred, and would it increase the percent egg yield? Do you think my ration well balanced?

A. (1) Your ration appears to be well balanced with the available material and you are getting good results. Under the circumstances we would not buy corn. We would, however, feed some oats in the litter and if barley is to be had at same prices, would add barley to the scratch grain ration. Proportion to be determined by appetite of the birds.

Q. (2) When feeding with automatic feeders do you leave them within reach of the chickens at all times?

Stevensville, Mont.

S. K.

A. (2) We do. We certainly would like to be able to buy good feeding wheat and good oats at the prices you buy. Wheat costs us at present time \$2.15 per hundred; oats, \$1.20 per 64 pounds, and corn, \$1.72 per hundred.

Diagnosis Wanted.

Q. I have been having serious trouble with my flock all summer and fall. The comb and wattles of the affected birds usually take on a purplish tinge, tho occasionally one is merely pale. In cases at all advanced the skin all over the body has the same purplish hue;
